## KEY FIGURES

SHORT-TERM DEC QTR 2001	Trend % change	Seasonally adjusted % change	Original % change
Operating income	-0.3	0.3	1.3
Selling prices	-0.5	-0.6	-0.4
Profit	2.1	4.1	8.9
Employment	-1.5	-1.6	-1.2

MEDIUM-TERM SEP QTR 2002	Trend % change	Seasonally adjusted % change	Original % change
Operating income	0.5	n.p.	0.9
Selling prices	-0.1	n.p.	0.1
Profit	8.2	n.p.	7.9
Employment	-1.2	n.p.	-0.7

## KEY POINTS

### SHORT-TERM

### TREND

 Operating income expectations have decreased by 0.3% although the rate of decline has slowed for the first time in two years. Profit expectations continue an upward trend. Expectations of Selling prices continue their downward trend, as does expectations of full time equivalent Employment.

### SEASONALLY ADJUSTED

 In seasonally adjusted terms businesses are expecting Profit to increase by 4.1% in December quarter 2001. This increase in Profit expectations follows four quarters of decreases in Profit expectations.

### MEDIUM-TERM

### TREND

Operating income and Profit continue to increase, by 0.5% and 8.2% respectively. Selling prices and full time equivalent Employment expectations decrease by 0.1% and 1.2% respectively.

### ORIGINAL

■ In original terms businesses are expecting increases in Operating income (0.9%), Selling Prices (0.1%) and Profit (7.9%). Medium term expectations for full-time equivalent Employment continues to decrease (0.7%).

### OPERATING INCOME

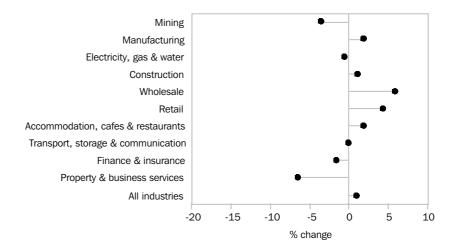

TIME SERIES

In original terms, Operating income is expected to increase by 1.3%. Medium and large businesses are expecting increases of 0.3% and 7.7% respectively. Small businesses are expecting a decrease in Operating income of 2.0%. This is the sixth consecutive quarter where small businesses have expected a decrease.

MAIN INDUSTRY COMPARISON

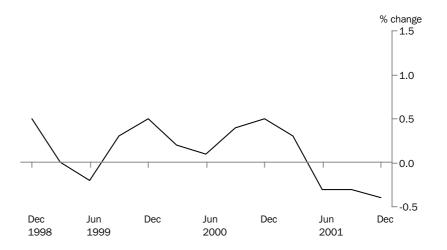

After three consecutive quarters of decreases, businesses in the Construction, Retail and Accommodation, cafes & restaurants industries are expecting Operating income to increase in the December quarter 2001 (by 1.4%, 4.6% and 2.2% respectively). Businesses in the Wholesale industry have the highest expectations of increases in Operating income (6.2%) while businesses in the Property & business services industry are expecting the largest decrease (6.5%).

### SELLING PRICES

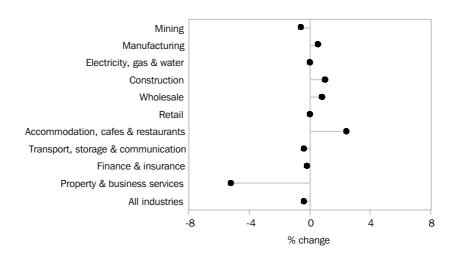

TIME SERIES

In original terms, Selling prices are expected to decrease by 0.4% in the December quarter 2001. This is the biggest decrease since the commencement of the series in the December quarter 1993. Large businesses expect Selling prices will increase by 0.6%, while small and medium businesses expect Selling prices to decrease by 0.7% and 0.9% respectively.

MAIN INDUSTRY COMPARISON

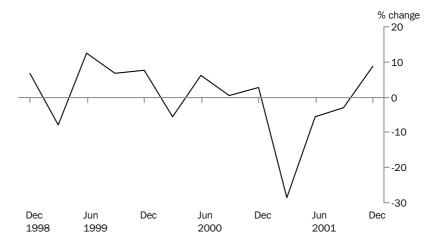

Businesses in the Accommodation, cafes & restaurants industry are expecting a 2.6% increase in Selling prices. Businesses in the Property & business services industry are especting the largest decrease in Selling prices (5.2%). This is the highest expectation for the Accommodation, cafes & restaurant industry and the lowest for the Property & businesses services industry since the commencement of the series in the December quarter 1993.

### **PROFITS**

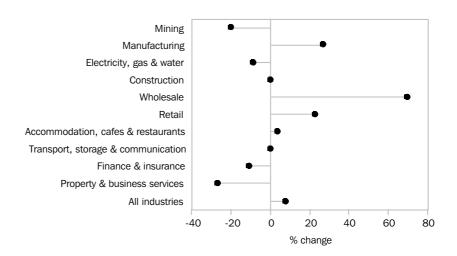

TIME SERIES

In original terms, businesses are expecting Profit to increase by 8.9% in the December quarter 2001. Businesses in the Wholesale industry are the major contributors to this increase. Medium and large businesses continue to expect increases in Profit (10.1% and 65.0% respectively). Small businesses continue to expect a decrease in Profit (16.6%).

MAIN INDUSTRY COMPARISON

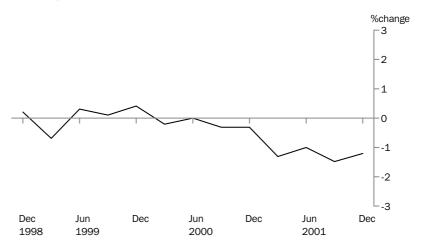

Businesses in the Wholesale industry expect Profit to increase by 70.6% in the December quarter 2001. Businesses in the Manufacturing and Retail industries are also expecting large short-term Profit increases of 28.0% and 23.9% respectively. Businesses in the Property & business services and Mining industries are expecting their lowest decreases in Profit since the commencement of the series in the December quarter 1993 (26.5% and 19.8% respectively).

### **EMPLOYMENT**

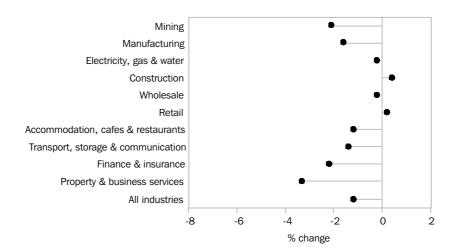

TIME SERIES

In original terms, expectations of full time equivalent Employment continue to decline. However, the December quarter 2001 expected decrease (1.2%) is an improvement on the expected decrease for the previous period (1.5%) Small and medium businesses continue to expect full time equivalent Employment to decline (1.9%) and 2.4% respectively). However large businesses have reversed their expectations of the previous three quarters and are now expecting that full time equivalent Employment will increase by 0.3% in the short-term.

MAIN INDUSTRY COMPARISON

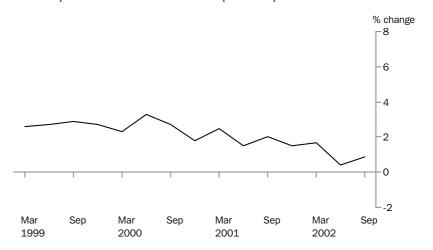

Businesses in the Construction and Retail industries are expecting full time equivalent Employment to increase (0.5% and 0.3% respectively). Businesses in all other iindustries are expecting decreases with businesses in the Property & business services industry expecting the largest short-term decrease in full time equivalent Employment (3.3%).

### OPERATING INCOME

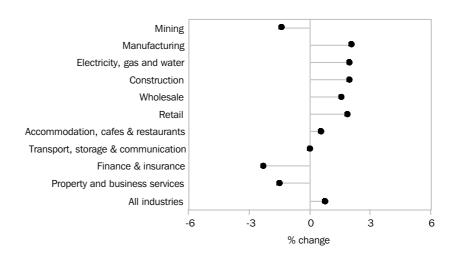

TIME SERIES

In original terms Operating income is expected to increase by 0.9% in the September quarter 2002. This is an improvement on the expectation for the previous quarter (0.4%). Medium and large businesses are expecting increases of 0.5% and 3.6% respectively. Small businesses continue to have a pessimistic outlook with Operating income expected to decline 0.5% in the September quarter 2002.

MAIN INDUSTRY COMPARISON

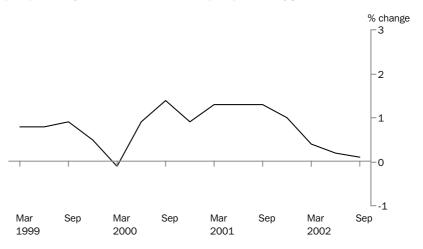

After five consecutive quarters of decreases in expectations, businesses in the Construction industry are expecting an increase in Operating income of 2.1% in the medium term. Similar increases are expected by businesses in the Manufacturing (2.2%), Electricity, gas & water (2.1%) and Retail (2.0%) industries. Businesses in the Finance & insurance industries reported that they expected their first decrease in Operating income (2.3%) since the commencement of the series in the September quarter 1994.

### SELLING PRICES

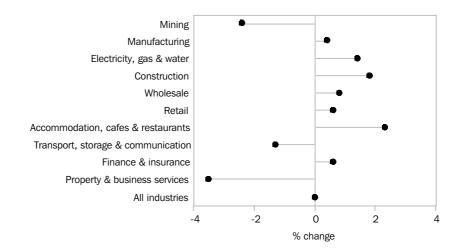

TIME SERIES

In original terms, Selling prices are expected to increase by 0.1% in the September quarter 2002. Small businesses are expecting no change, medium businesses a decrease (0.8%) and large businesses an increase (0.8%) in Selling prices.

MAIN INDUSTRY COMPARISON

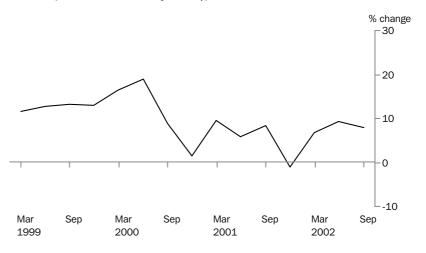

Businesses in the Accommodation, cafes & restaurants industries are expecting the largest September quarter 2002 increase in Selling prices (2.4%), whereas businesses in the Property & business services industries are expecting the largest decrease (3.5%).

### **PROFITS**

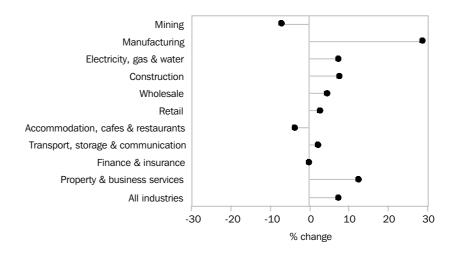

TIME SERIES

In original terms, Profit expectations are expected to increase by 7.9% in the September quarter 2002. Although Profit expectations for small businesses continue to decline, the expected decrease for this quarter (1.3%) is smaller than in any of the previous three periods. Medium and large businesses continue to have strong expectations of Profit increases (11.7% and 26.5% respectively).

MAIN INDUSTRY COMPARISON

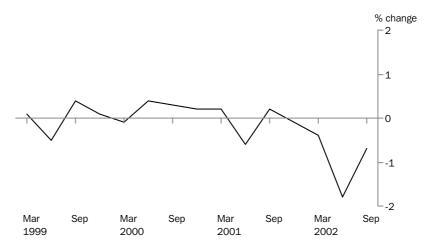

Businesses in the Manufacturing industry are expecting that Profit will increase 29.3%. This is the highest medium term September quarter increase for this industry since the September quarter 1998. Businesses in the Mining, Accommodation, cafes & restaurants and Finance & insurance industries all expect decreases in medium-term Profit (7.1%, 3.8% and 0.7% respectively).

### **EMPLOYMENT**

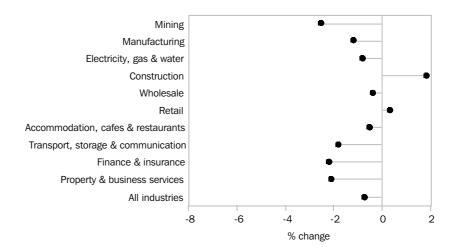

TIME SERIES

Although, in original terms, full time equivalent Employment is expected to decline by 0.7%, this expected decline is an improvement on the record expectation decline recorded in the previous period. Businesses of all size are continuing to expect declines.

MAIN INDUSTRY COMPARISON

Businesses in the Construction industry are expecting full time equivalent employment to increase by 1.9%. This is a significant turnaround from the 6.5% decrease businesses in the Construction industry expected in the previous quarter. Businesses in the Retail industry also expect an increase (0.4%). Businesses in all other industries expect full time equivalent Employment to decrease.

INTRODUCTION

- **1** This publication contains estimates of future economic activity based on the business expectations of senior executives, managers and proprietors of businesses operating in Australia. The estimates have been compiled from data collected by the Australian Bureau of Statistics (ABS) in its quarterly survey of business expectations.
- **2** This survey commenced with short term expectations for the December quarter 1993 and medium term expectations for the September quarter 1994. This quarter's publication contains estimates of the expected change between the September quarter 2001 and the December quarter 2001 and the September quarter 2002.
- **3** The seasonal adjustment of these series has been reviewed. For this issue, the original, seasonally adjusted and trend series are the published indicators for short-term business expectations, with the trend providing an indication of the underlying direction of the series. The volatility of the medium-term seasonally adjusted series is such that the original and trend series will continue to be the published indicators, with the trend providing an indication of the underlying direction of the series. Seasonally adjusted estimates are provided on page 12, with an explanation in paragraphs 28 to 32 of the Explanatory Notes. Trend estimates are provided on pages 12 and 20, with an explanation in paragraph 33 of the Explanatory Notes.
- **4** The survey is conducted by mail each quarter. This quarter's survey was collected during July and August 2001
- **5** It is based on a stratified random sample of approximately 4,500 businesses selected from the ABS annual Economic Activity Survey (EAS). EAS in turn derives its survey population from the ABS central register of business units.
- **6** The sample is stratified by industry, sector (private and government business) and size of business (measured by number of employees). Within each stratum businesses are sampled randomly, with each business in a stratum having the same probability of selection.
- **7** The sample is supplemented by a further sample of businesses which have been added to the ABS business register since the original EAS sample was selected. This ensures that the expectations of relatively new businesses are taken into account in the overall estimates.

SCOPE OF THE SURVEY

- **8** The statistics in this publication relate to employing businesses in all industries and sectors of the Australian economy except:
  - agriculture, forestry and fishing;
- general government.
- **9** Data related to intended sheep matings are collected annually by the ABS and published in catalogue 7111.0 and 7113.0 publications from the Agricultural Commodity Survey.
- **10** The Australian Bureau of Agricultural and Resource Economics (ABARE) publishes its forecasts for specific commodities and for the Agriculture industry generally, as part of the annual Outlook conference in February each year. ABARE updates these forecasts in its quarterly publication *Australian Commodities—Forecasts and Issues*.

CLASSIFICATION

**11** Each statistical unit selected in the survey is classified to an industry according to the Australian and New Zealand Standard Industrial Classification (ANZSIC).

#### **BUSINESS SIZE**

- **12** Data presented in this publication is classified by three business sizes :
- small (less than 20 employees, except for manufacturers where it is less than 100);
- medium (20 to 99 employees, except for manufacturers where it is 100 to 599 employees); and
- large (100 or more employees, except for manufacturers where it is 600 or more employees).

#### PROPORTION OF BUSINESSES SELECTED BY SIZE WITHIN AUSTRALIA

	Small	Medium	Large	All businesses
	%	%	%	%
Manufacturing	62.4	14.1	23.5	100.0
Other industries	51.3	22.2	26.4	100.0
All industries	53.8	20.4	25.8	100.0

#### STATISTICAL UNIT

- **13** The statistical unit used in the survey of business expectations is the management unit. The management unit is the highest level accounting unit within a business for which sub-annual accounts are maintained, having regard for industry homogeneity.
- **14** In nearly all cases the management unit coincides with the legal entity owning the business (i.e. company, partnership, trust, sole proprietor, etc.).
- **15** In the case of large diversified businesses, however, there may be more than one management unit, each coinciding with a 'division' or 'line of business'.

## BUSINESS PERFORMANCE INDICATORS

- **16** The survey uses a set of well recognised economic trading indicators in measuring future trading activity. These indicators are: Operating income, selling prices, operating expenses, employment, etc. See Glossary for details.
- **17** The survey asks for full-time equivalent paid persons working. This is not a usual definition of employment as used by the ABS. It would be incorrect to assume a direct comparison with labour force statistics or other ABS employment statistics for instance.

## SIMPLE AND WEIGHTED NET BALANCE

- **18** The simple net balance for a selected indicator is estimated by subtracting the percentage of respondents predicting a 'fall' from the percentage of respondents expecting a 'rise'.
- **19** The net balance is a *qualitative* statistic best suited to indicating the sentiment of businesses about future business conditions, and measures the net proportion of businesses predicting a rise or fall in future business conditions.
- **20** The weighted net balance is estimated by weighting the surveyed direction of change for each unit by its benchmark level response for the equivalent variable in the EAS.
- **21** Weighting the responses enables larger businesses to have an influence upon the net balance proportional to the level of their expenditure, employment size, etc. Movements in the weighted net balance indicate the net proportion of business activity predicting a rise or fall in future business conditions.

EXPECTED AGGREGATE CHANGE

- **22** The expected aggregate change measures the forecasted percentage change in the level of a particular indicator. It is estimated by weighting the expected percentage change reported by respondents to the survey by their proportion of aggregate sales, expenditure, employment, etc. in the economy as measured from the benchmark estimate in the EAS.
- **23** The weighted aggregate estimate of a particular indicator, combined with an estimated level, can be used to quantify its expected future movement.

COMPARISON OF RESULTS

- **24** The weighted net balance and expected aggregate change are complementary measures which, in combination, give a broad indication of future business conditions. It is possible to obtain estimates in opposite directions for the net balance and weighted aggregate change estimates.
- **25** The weighted net balance provides a *qualitative* measure of the proportion of businesses predicting the direction of change in future business conditions. The expected aggregate change, however, provides a *quantitative* measure predicting the magnitude of change in a selected variable.
- **26** A comparison of the various expectations measures is provided in the following table:

### COMPARISON OF THREE MEASURES OF BUSINESS EXPECTATIONS

	Simple net balance	Weighted net balance	Weighted aggregate
	%	%	%
Operating income Wage costs	12.4 15.6	14.2 20.2	1.3 0.1
Employment Full time equivalent	-6.3	-8.3	-1.2

**27** For the December quarter 2001 a simple net balance of 6.3% of businesses expect a fall in employment. The fall in the employment weighted net balance of 8.3% indicates that the businesses expecting a fall in employment tend to be larger than those expecting a rise.

SEASONAL ADJUSTMENT

- **28** The quarterly business expectations series in this publication are affected to some extent by seasonal influences and it is useful to recognise and take account of this element of variation.
- **29** Seasonal adjustment may be carried out by various methods and the results may vary slightly depending on the procedure adopted. Accordingly, seasonally adjusted statistics are in fact only indicative and should not be regarded as in any way definitive. In interpreting seasonally adjusted data it is important to therefore bear in mind the methods by which they have been derived and the limitations to which the methods used are subject.

SEASONAL ADJUSTMENT continued

- **30** At least once each year the seasonally adjusted series are revised to take account of the latest available data. The most recent reanalysis takes into account short-term expectations collected up to and including the December quarter 2001, and medium-term expectations collected up to and including the September quarter 2002. Data for subsequent periods are seasonally adjusted on the basis of extrapolation of historical patterns. The nature of the seasonal adjustment process is such that the magnitude of some revisions resulting from reanalysis may be quite significant, especially for data for more recent quarters. Care should be exercised when interpreting quarter to quarter movements in the seasonally adjusted series in the publication, particularly for recent quarters.
- **31** It should be noted that the seasonally adjusted figures necessarily reflect the sampling and other errors to which the original figures are subject.
- **32** Details of the seasonal adjustment methods used, together with selected measures of volatility for these series, are available upon request.

TREND ESTIMATES

**33** The trend estimates are derived by applying a 7-term Henderson moving average to the published and unpublished seasonally adjusted series. The 7-term Henderson average (like all Henderson averages) is symmetric, but as the end of a time series is approached, asymmetric forms of the average are applied. Unlike the weights of the standard 7-term Henderson moving average, the weights employed here have been tailored to suit the particular characteristics of individual series. While the asymmetric weights enable trend estimates for recent quarters to be produced, they can result in revisions to the estimates for the most recent three quarters as additional observations become available. There may also be revisions because of changes in the original data and as a result of the re-estimation of the seasonal factors. For further Information, see *Information Paper: A Guide to Interpreting Time Series — Monitoring Trends: an Overview* (Cat. no. 1348.0) or contact the Assistant Director, Time Series Analysis on Canberra 02 6252 6345.

RELIABILITY OF ESTIMATES

- **34** All of the estimates in this publication are subject to:
  - sampling error;
- non-sampling error; and
- benchmark bias.

SAMPLING ERROR

**35** Sampling error is due to the use of a sample rather than a complete enumeration; that is, the estimates differ from the values that would have been obtained if all units were surveyed. A measure of the likely difference is given by the *standard error (SE)*, which indicates the extent to which an estimate might have varied by chance because only a sample of units was included. There are about two chances in three that the difference will be within one standard error, and about nineteen chances in twenty that the difference will be within two standard errors.

STANDARD ERRORS

- **36** The table below provides standard errors for some of the main estimates of this publication. As an example of how the standard errors can be interpreted, given that the short term expectation for *Operating Income* for Australia is 1.3% with a standard error of 0.8, there would be two chances in three that the true value would be within the range 0.5% and 2.1%.
- **37** The size of the SE may be a misleading indicator of the reliability of some of the estimates for profit. This situation may occur where an estimate may legitimately include positive and negative values reflecting the financial positions of different businesses. In these cases the aggregate estimate can be small reative to the contribution of individual businesses resulting in an SE which is large relative to the estimate.

STANDARD ERRORS OF KEY ESTIMATES, SHORT-TERM EXPECTATION,

Business performance indicator	Survey estimate	Standard error
Operating income	1.3	0.8
Selling prices	-0.4	0.3
Profit	8.9	8.1
Capital expenditure	0.3	1.5
Inventories	-0.9	0.5
Employment	-1.2	0.3
Wage costs	0.1	0.3

AUSTRALIA

NON-SAMPLING ERROR

- **38** All other inaccuracies are referred to collectively as non-sampling error. The major areas of concern are: non-response; mis-reporting of data by respondents; and deficiency in the central register of economic units.
- **39** Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires and efficient editing and operating procedures.
- **40** The expected aggregate change is designed to reflect business expectations for each business performance indicator, as accurately as possible. However, while the estimates should be appropriate measures of business climate, the expectations may not predict actual movements accurately. Businesses may be too optimistic or pessimistic in their predictions at different times.
- **41** In addition, actual movements would be partly comprised of activity of relatively recently formed businesses, and businesses which are formed during the expectations reference period which are not immediately represented in BES because they would not have been included on the ABS central register of economic units. Allowance is made in other ABS series for coverage deficiencies relating to newly formed businesses but no allowance for this is made in BES. This is important for some variables, where the contribution of new businesses to growth in that variable is relatively substantial (e.g. employment, capital expenditure or stocks).

BENCHMARKS

- **42** Benchmark (or base level) information is obtained from the ABS annual Economic Activity Survey (EAS). It is used to weight individual business responses by their relative contribution to each business performance indicator. This enables percentage responses from different businesses to be aggregated.
- **43** In June each year a new sample is selected from units surveyed by EAS in the previous financial year. New benchmarks are introduced for the survey conducted in August each year. The benchmark data become increasingly out of date as they are used in the surveys conducted in November, February and May. In certain cases, the benchmark data may not accurately reflect the current activity of a business. It is currently not possible to measure the extent of any such inaccuracies.
- **44** Results from the EAS are published in *Business Operations and Industry Performance* (Cat. no. 8140.0).

SYMBOLS AND OTHER USAGES

n.p. not available for publication but included in totals where applicable, unless otherwise indicated.

### GLOSSARY

**Capital expenditure** The expected change in the value of capital expenditure in new tangible assets.

Goods and Services Tax The Goods and Services Tax (GST) is excluded from all data items. However, the cost of complying with tax reform, e.g. the purchase of computer equipment or

software, is included in the relevant data items.

**Inventories** The expected change in the book value of inventories between the end of the

collection quarter and the end of the reference periods.

Non-wage labour expenses 
The expected change in the total amount of employment related expenses not

paid directly to employees.

Some of these expenses are payroll tax, worker's compensation and

superannuation.

Operating income The expected change in operating income derived from the sale of goods or the

provision of services by a business in terms of value.

Financial institutions report on the expected change in gross interest income plus

fees and commissions.

Non-profit or charitable organisations report on the expected change in fees received for services, donations from the public and government grants and

subsidies.

Other operating expenses 
The expected change in the total amount of all expenses which are not classified

as labour expenses.

Some of these expenses are overheads, advertising, raw materials and packaging

and handling.

Paid persons working The expected change in the number of paid persons working. Where part time or

casual employees are involved employers are requested to convert to a full-time equivalent. It should be noted that most other ABS series which provide data on

paid persons working do not use a full-time equivalent measure.

**Profit** Profit is a derived item based on the present trading performance of a business and the expected changes to the level of sales of goods and services and the sum

of all expense items.

The difference between the new benchmarks for the *sales of goods and services* and the sum of all expenses items (the sum of *total wage expense, non-wage labour expense and all other operating expenses*) as determined by the

responses received, the Economic Activity Survey benchmarks for those items and an indicator of present trading performance (cost/income ratio) are used to

determine the expected change for profit for the reference periods.

Because of reporting difficulties experienced with the cost/income ratios, caution

should be exercised in interpreting profit expectations.

**Reference periods** There are two reference periods surveyed each quarter:

 Short-term (if the current quarter is September 2000, then the quarter being surveyed is December 2000); and

 Medium-term (if the current quarter is September 2000, then the quarter being surveyed is September 2001).

## GLOSSARY

Selling prices

The expected change in the unit price of goods sold or services provided by the business. Where a business sells a range of products or services a representative product or service is used.

Financial institutions report on interest rates, services and commissions charged.

The benchmark for weighting the selling prices response is derived from associating selling prices with total expenses.

State information

State information has been derived for businesses in the survey which operate in more than one State.

This has been achieved by

- applying a weight (the proportion of a business' economic activity undertaken in each State) to the benchmarks for that business to arrive at potentially eight different benchmarks for each business performance indicator; and
- applying the overall percentage change in the business performance indicators obtained from the survey to each of the State benchmarks for each business performance indicator.

Total operating expenses

This is a derived estimate from the weighted response for the total of wage, non-wage labour and all other expenses.

Total wage expenses

The expected change in the total amount of direct wage and salaries paid to employees.

### OTHER ABS DATA

AVAILABLE DATA

The amount of data collected from the Survey of Business Expectations is much greater than the data contained in this publication.

Subject to the ABS provisions for maintaining the confidentiality of respondents and their information, more detailed information by industry and size of business may be made available on request.

SIZE OF BUSINESS

The size of business is based on employment. Additional data can be estimated for the following size ranges:

- less than 20 employees;
- 20 to 99 employees;
- 100 to 599 employees;
- 600 or more employees;
- small (less than 20 employees except for manufacturers, where it is less than 100 employees);
- medium (20 to 99 employees except for manufacturers, where it is 100 to 599 employees); and
- large (100 or more employees except for manufacturers, where it is 600 or more employees).

INDUSTRY

Industry is classified according to ANZSIC and is available at the 1 and 2 digit level. Additional data is available for:

- 15 industries categorised at the one digit ANZSIC level;
- 47 industries categorised at the two digit ANZSIC level; and
- user defined industry groups such as 'service industries'.

STATE INFORMATION

State information has been derived from the business activity conducted by business in each State. Where sufficient information is available to provide satisfactory estimates, data may be made available at the same level of detail as that for Australia. State information is subject to a greater degree of variance than the Australia data.

NET BALANCE

A weighted net balance for industries and size of business can be produced as a special data service.

MORE INFORMATION

For more information please contact the officer named at the front of this publication or write to:

Business Expectations Survey Australian Bureau of Statistics PO Box 10

Belconnen ACT 2616.

## FOR MORE INFORMATION...

INTERNET www.abs.gov.au the ABS web site is the best place to

start for access to summary data from our latest publications, information about the ABS, advice about upcoming releases, our catalogue, and Australia Now—a

statistical profile.
