JANUARY KEY POINTS

TREND ESTIMATES

- The trend estimate for total housing finance commitments increased by 0.9% in January 2001, with growth slowing this month. The trend for established dwelling finance grew by 0.8%, with most of this growth due to the refinancing of existing loans.
- The construction finance trend has been flat for the last three months. The newly erected dwelling finance trend continued its recent growth, increasing by 4.1% in January, coming out of a ten year low in September 2000.

SEASONALLY ADJUSTED ESTIMATES

- Seasonally adjusted total housing finance commitments declined by 5.8% in January 2001, reversing growth of a similar magnitude last month. Established dwelling finance fell by 6.2%.
- Construction finance commitments fell by 3.6% in January 2001, after two months of moderate growth. Commitments for newly erected dwelling finance remained virtually constant.

ORIGINAL ESTIMATES

- The average borrowing size increased for the second successive month, from \$133 400 in December to \$134 500 in January 2001.
- The percentage of fixed rate commitments (for two years or more), continued to decline, falling from a revised 9.4% in December to 9.0% in January 2001.

- For further information about these and related statistics, contact Stuart Veitch on Sydney 02 9268 4317, or the National Information Service on 1300 135 070.

CHANGES IN THIS ISSUE

Revisions were made to source data back to October 2000, due to more accurate reporting systems from one lender. There was an upward shift in the original housing commitments series of around 1 500 commitments in October 2000, mostly affecting refinancing and established dwelling finance, and all series for Banks. The revisions have had little impact on the most recent estimates of monthly movements, but have caused increased growth in the trend series during late 2000, all else being equal.

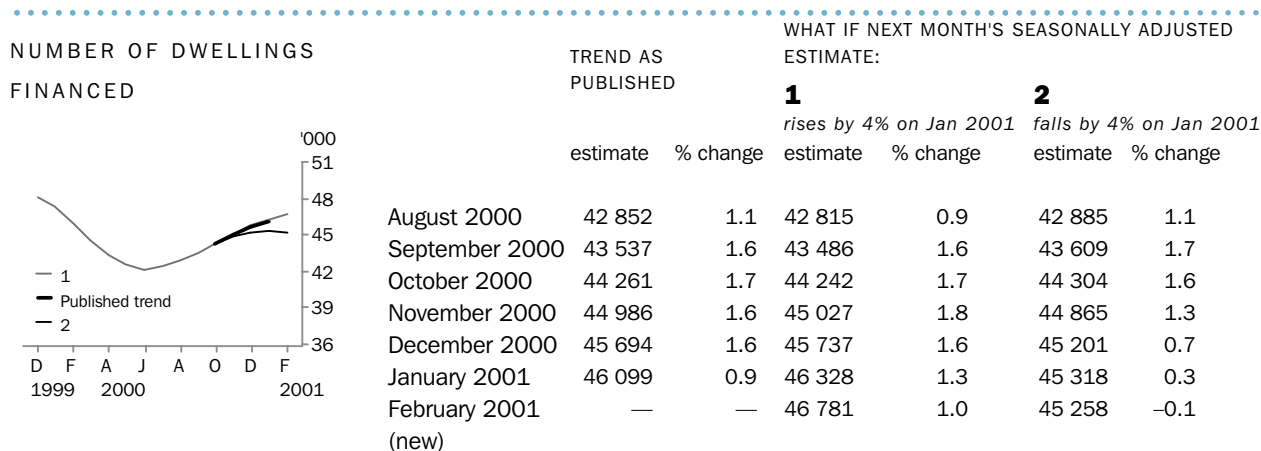

SENSITIVITY ANALYSIS

Readers should exercise care when interpreting this month's trend estimates because they will be revised when next month's seasonally adjusted estimates become available. For further information, see Explanatory Notes 20 to 21.

The graph below presents the effect of two possible scenarios on the previous trend estimates:

- 1** The February 2001 seasonally adjusted estimate of number of dwellings financed is *higher* than the January 2001 seasonally adjusted estimate by 4.0%.
- 2** The February 2001 seasonally adjusted estimate of number of dwellings financed is *lower* than the January 2001 seasonally adjusted estimate by 4.0%.

The percentage change of 4.0% was chosen because the average absolute percentage change of the seasonally adjusted series, based on the last 10 years of data, has been 4.0%.

T. J. Skinner
Acting Australian Statistician

HOUSING FINANCE: Summary of findings

NUMBER OF DWELLINGS FINANCED

DWELLINGS FINANCED

The seasonally adjusted housing finance series declined by 5.8% in January 2001, reversing the increase of the previous month. The trend series continues to grow, increasing by 0.9%, with some upward momentum after recent strength in the adjusted series.

All States saw declines in their seasonally adjusted estimates for total commitments, with the largest fall occurring in NSW (down 790 commitments or 4.6%) and Victoria (down 465 commitments or 4.3%). The large percentage declines in Tasmania (down 17.2%) and the ACT (down 16.2%) come after recent strength in those series.

DWELLINGS FINANCED EXCLUDING REFINANCING

The trend series for housing finance, excluding refinancing, was steady in January 2001, edging up by 0.3%, while the seasonally adjusted series fell 5.2%.

VALUE OF COMMITMENTS

The value of housing finance commitments (seasonally adjusted) fell by 4.3% in January 2001 after the strong increase (of 12.5%) in December.

The percentage fall in the value of commitments was smaller than the percentage fall in the number of commitments, leading to a slight increase in the average borrowing size (in original terms) from \$133 400 to \$134 500 in January 2001.

Trend series growth remains strong, aided by revisions to source data, increasing by 2.2% in January 2001.

HOUSING FINANCE: Summary of findings

PURPOSE OF FINANCE

CONSTRUCTION OF DWELLINGS

The seasonally adjusted construction finance series declined by 3.6% in January 2001, after growing by a total of 7.9% in the two months to December 2000. As a result the trend series has flattened for the past three months.

PURCHASE OF NEW DWELLINGS

Seasonally adjusted newly erected dwelling finance remained at its highest level in almost a year (down marginally on December). The trend series has continued to grow strongly since it was at its lowest level in ten years in September 2000. The trend increase in January 2001 was 4.1%.

PURCHASE OF ESTABLISHED DWELLINGS

The seasonally adjusted series for commitments for established dwellings declined by 6.2% in January 2001, down from the high level of December 2000. The trend series growth has slowed, increasing by 0.8% in January 2001 after a 1.7% rise in December. Most of the recent growth is due to refinancing of loans.

HOUSING FINANCE: Summary of findings

PURPOSE OF FINANCE *continued*

REFINANCING

Refinancing of established dwellings (seasonally adjusted) fell by 7.6% in January 2001 after three months of strong growth. The trend for refinancing continues to grow strongly despite the fall in the adjusted series, growing by 2.9% in December. The trend growth was assisted by upward revisions to source data back to October 2000.

TYPE OF LENDER

BANKS

The seasonally adjusted series for commitments by banks fell by 5.4% in January 2001 after two strong months of growth. The trend series grew by 1.0%.

NON-BANKS

The fall in commitments by non-banks (seasonally adjusted) was greater than for banks, declining by 7.3% in January after a 12.0% increase in the previous month. The trend series is increasing slightly, growing by 0.6% in January 2001.

(a) Excludes alterations and additions.

(b) Includes refinancing.

EXPLANATORY NOTES

INTRODUCTION

1 This publication presents statistics of secured housing finance commitments made by significant lenders to individuals. The commitments are for the construction or purchase of owner occupied dwellings. Commitments for the purchase of land, or for the construction or purchase of dwellings for rental or resale, are excluded and shown in *Lending Finance, Australia* (Cat. no. 5671.0).

SCOPE

2 Finance commitments made by the following types of lenders are included:

- Banks
- Permanent building societies
- Credit unions/co-operative credit societies
- Life or general insurance companies
- General government enterprises
- Superannuation funds
- Securitiser of mortgage assets (wholesale lenders) which provide funds to borrowers through a retail intermediary (e.g. mortgage originators)
- Other corporations registered under the *Financial Corporations Act 1974*.

3 All lending commitments are classified to the Lender Type which is (or will be) the legal lender on the corresponding loan contract. Commitments are published for three Lender Types: Banks, Permanent Building Societies and Wholesale Lenders n.e.c. (not elsewhere classified).

COVERAGE

4 The statistics cover all banks and permanent building societies. For other lenders, the largest lenders to individuals for secured housing finance for owner occupation are included so that, together with banks and building societies, at least 95% of the Australian total of finance commitments for owner occupied housing is covered, and at least 90% of each State total is covered. While many smaller contributors to the Other Lenders series are excluded under these coverage criteria, at least 70% of finance commitments by other lenders are covered.

5 An annual collection is conducted to maintain and update the survey coverage and new lenders are included as their lending for owner occupied housing becomes sufficiently large.

6 From July 2000, the collection covers all commitments by banks and permanent building societies, all other lenders providing funds of more than \$187 million in 1999, and some additional smaller other lenders where necessary to maintain collection coverage (as specified in paragraph 4).

REVISIONS

7 Revisions to previously published statistics are included in the publication as they occur.

8 Changes in the classification of lenders (e.g. the conversion of a permanent building society to a bank) are reflected in the Type of Lender series from the month of such changes. Data for earlier periods for such lenders are not reclassified. Details of the establishment of new banks are published in the Reserve Bank of Australia's monthly Bulletin in the section on Technical Notes to Tables.

WHOLESALE LENDERS

9 A wholesale lender provides funds to borrowers through a retail intermediary which may then also be responsible for the on-going relationship with the borrower. The Wholesale Lenders n.e.c. series almost exclusively comprises securitisation vehicles (typically special purpose trusts), established to issue mortgage backed securities. It excludes commitments where a bank or permanent building society (PBS), acting as a wholesale provider of funds, is the lender on the loan contract. Those commitments are published as bank or permanent building society commitments.

EXPLANATORY NOTES

WHOLESALE LENDERS *continued*

10 Commitments for housing finance by Wholesale Lenders n.e.c. are included with both Other Lenders and Total Lenders, as well as being separately identified.

11 From July 1995 to July 2000, mortgage managers reported housing finance commitments on behalf of wholesale lenders. The introduction of wholesale lenders as the reporting unit does not change the scope of the collection, but has increased its coverage. This, along with the reclassification of some lending activity, increased the level of the Wholesale Lenders n.e.c. series by \$249 million in July 2000.

12 Wholesale lenders contribute to the Other Lenders series, which is seasonally adjusted in table 2. A trend break was added to the Other Lenders series, shifting the trend up by 1 579 commitments and \$178 million in July 2000. Revisions related to the introduction of wholesale lenders also resulted in a downward shift in the Banks trend of 1 256 commitments and \$167 million. Consequential breaks in the finance purpose trend series at July 2000 are:

- construction finance trend shifted down 16 commitments (\$3 million)
- newly erected dwelling trend shifted up 26 commitments (\$1 million)
- established dwelling trend shifted up 313 commitments (\$13 million)
- refinancing trend shifted up 177 commitments (\$17 million)
- total finance trend shifted up 323 commitments (\$11 million).

13 Because of difficulties experienced by Wholesale Lenders n.e.c. in accurately identifying first home buyers in their commitments, these data are not used in estimating First Home Buyer commitments (table 7). Instead, the percentage of First Home Buyer commitments made by all banks and permanent building societies is applied to total Wholesale Lenders n.e.c. commitments in calculating their contribution to the series for First Home Buyers from July 2000. As a result, First Home Buyers commitments have been revised upwards by 0.8% in July 2000.

14 An article on the introduction of the Wholesale Lenders n.e.c. series (including implications for the First Home Buyers series) featured in the October 2000 issue of this publication. A copy of the article is available from the ABS Financial Surveys section.

SEASONAL ADJUSTMENT

15 Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation and 'trading day effects'. A 'trading day effect' reflects the varying amounts of activity on different days of the week and the different numbers of days of the week in any month (i.e. the number of Sundays, Mondays, etc.). This effect may be partly caused by the reporting practices of the lenders. Adjustment is also made for Easter which may affect the March and April estimates differently. Seasonal adjustment does not remove the effect of irregular or non-seasonal influences (e.g. a change in interest rates) from the series.

16 Over the period from early 1990 to April 1995, each of the four major banks changed from reporting for the 4 or 5 weeks ending on the last Wednesday of each month to reporting on a calendar month basis. The published seasonally adjusted data take account of this change in pattern.

17 Rapid change in the financial sector, and particularly developments in the provision of housing finance, may cause changes in the seasonal and trading day patterns of the housing finance data. Recent examples include changes in the classification of financial institutions (particularly the reclassification of non bank financial institutions to banks) and the increased use of mortgage securitisation.

EXPLANATORY NOTES

SEASONAL ADJUSTMENT <i>continued</i>	<p>18 Estimation of seasonal adjustment and trading day factors that reflect the full effect of recent developments is not possible until a sufficient number of years of data have been collected. When changes are occurring in the seasonal patterns, larger revisions to the seasonally adjusted series can be expected at the time of the annual seasonal re-analysis. Accordingly, the trend estimate data provide a more reliable indicator of underlying movement in housing finance commitments. (See paragraphs 20 and 21 for further information on trend estimates).</p> <p>19 State component series have been seasonally adjusted independently of the Australian series. The sum of the State components is therefore unlikely to equal the corresponding Australian Total series. The State component series are also affected by the changes mentioned in paragraphs 15 to 18.</p>
TREND ESTIMATES	<p>20 Smoothing seasonally adjusted series reduces the impact of the irregular component of the seasonally adjusted series and creates trend estimates. These trend estimates are derived by applying a 13 term Henderson-weighted moving average to all but the last six months of the respective seasonally adjusted series. Trend series are created for the last six months by applying surrogates of the Henderson moving average to the seasonally adjusted series. For further information, refer to <i>Information Paper: A Guide to Interpreting Time Series—Monitoring Trends: An Overview</i> (Cat. no. 1348.0) or contact the Assistant Director, Time Series Analysis on Canberra 02 6252 6345.</p> <p>21 While the smoothing technique described in paragraph 20 enables trend estimates to be produced for the latest few months, it does result in revisions to the trend estimates as new data become available. Generally, revisions become smaller over time and, after three months, usually have a negligible impact on the series. Changes in the original data and re-estimation of seasonal factors may also lead to revisions to the trend.</p>
EFFECTS OF ROUNDING	<p>22 Where figures have been rounded, discrepancies may occur between sums of the component items and totals.</p>
UNPUBLISHED DATA	<p>23 Estimates for months prior to those shown in this publication and more detailed series are available. There will be a charge for the provision of unpublished data.</p> <p>24 Detailed data are also available from Ausstats, a subscriber service of on-line time series data in spreadsheet format. To subscribe, or for more information, contact the National Information Service on 1300 135 070.</p>

GLOSSARY

Alterations and additions	Alterations and additions cover all structural and non-structural changes which are integral to the functional and structural design of a dwelling. Examples are garages, carports, pergolas, reroofing, recladding, etc. Alterations and additions do not include swimming pools, ongoing repairs, or maintenance and home improvements which do not involve building work.
Average borrowing	Average borrowing is calculated as follows: $\frac{\text{Total value of lending commitments per month}}{\text{Total number of dwellings financed per month}}$ Average borrowing does not necessarily represent the average loan size per dwelling. For instance, average borrowing separately reflects first and second mortgages, committed in separate months, which apply to the same dwelling.
Commitment	A lending commitment is a firm offer of housing finance. It either has been, or is normally expected to be, accepted. Included are commitments to provide housing finance to employees and commitments accepted and cancelled in the same month.
Commitments not advanced	Commitments not advanced at the end of the period are calculated as follows: $\begin{aligned} & \text{Balance of unadvanced commitments at the end of the previous period} \\ + & \text{ Total new housing commitments (including refinancing)} \\ + & \text{ Alterations and additions} \\ \hline = & \text{ Total commitments} \\ - & \text{ Cancellations of commitments} \\ - & \text{ Commitments advanced during the period} \\ \hline = & \text{ Commitments not advanced at the end of the period} \end{aligned}$
Commitment value	The commitment value for a contract of sale is the dwelling's sale value less any deposit.
Construction of dwellings	Construction of dwellings represents commitments made to individuals to finance, by way of progress payments, the construction of owner occupied dwellings.
Dwelling	A dwelling is a single self-contained place of residence such as a detached or semi-detached house, a terrace house, a flat, home unit, town house, etc.
Dwelling units	Dwelling units refer to the number of single self-contained residences for which commitments have been made, either on the security of first mortgage or on contract of sale.
Established dwelling	An established dwelling is one which has been completed for 12 months or more prior to the lodgement of a loan application, or which has been previously occupied.
First home buyers	First home buyers are persons entering the home ownership market for the first time.
Fixed rate loan	Fixed rate loans have a set interest rate which cannot be varied, either upward or downward, for a minimum period of two years. Capped loans are not categorised as fixed rate loans because their interest rate can vary within a two year period.

G L O S S A R Y

- Newly erected dwelling** A newly erected dwelling is one that has been completed within 12 months of the lodgement of a loan application, and the borrower will be the first occupant.
- Refinancing** Refinancing represents a commitment to refinance an existing loan where the refinancing lender is not the lender who made the original loan. Excluded are an institution's refinancing of its own loans and the refinancing of loans to fund a change of residence. The latter is treated as a new lending commitment.
- Secured housing finance** This is all secured commitments to individuals for the construction or purchase of dwellings for owner occupation, regardless of type of security. Commitments for dwellings that will be occupied by persons other than the owner(s) are excluded.
- Self-contained** The dwelling includes bathing and cooking facilities.
- Wholesale Lenders** A wholesale lender provides funds to borrowers through a retail intermediary which may then also be responsible for the ongoing relationship with the borrower. The Wholesale Lenders n.e.c. (not elsewhere classified) series almost exclusively comprises securitisation vehicles (typically special purpose trusts) established to issue mortgage backed securities. It excludes funds provided where a bank or permanent building society, acting as a wholesale provider of funds, remains the lender on the contract. Those commitments are published as bank or permanent building society commitments.
