| Income tax, net interest \& depreciation | 13253 | 3.7 | 17.3 |

## DECEMBER QTR KEY POINTS

## TREND ESTIMATES

- The provisional trend estimate for company profits before income tax for companies with more than 30 employees is $\$ 6649 \mathrm{~m}$.
- Following decreases between December 1995 and September 1997, the trend estimate of company profits before income tax has risen over the past five quarters, but the rate of growth is slowing.

## SEASONALLYADJUSTED

- The seasonally adjusted estimate of company profits before income tax decreased by $0.1 \%$ in the December quarter 1998.
- The largest decrease was in Mining (down $\$ 524 \mathrm{~m}$ or $37 \%$ ). This decrease was caused mainly by lower commodity prices and lower sales.
- The largest increases were in Services to Finance and insurance ( $\$ 205 \mathrm{~m}$ ), Manufacturing ( $\$ 125 \mathrm{~m}$ ) and Other services ( $\$ 103 \mathrm{~m}$ )
- Retail trade again grew strongly, with a $8 \%$ increase this quarter following the September quarter increase of $37 \%$.

FORTHCOMING ISSUES

CHANGES IN THIS ISSUE

SAMPLING ERRORS

TREND REVISIONS

ISSUE (Quarter)
March 1999
June 1999

RELEASE DATE
20 May 1999
19 August 1999

This issue contains revisions to the September 1998 quarter as a result of responses received after publication of the previous issue. The revisions affect all industries in original, seasonally adjusted and trend terms.

Standard errors for estimates contained in this publication are shown on pages 14-15.

The most recent trend estimates are likely to be revised when seasonally adjusted estimates for subsequent quarters become available. The graph below presents the effect of two possible scenarios on the previous trend estimates:

1 The March 1999 seasonally adjusted estimate for company profits before income tax is higher than the December 1998 seasonally adjusted estimate by $10.0 \%$.
2 The March 1999 seasonally adjusted estimate for company profits before income tax is lower than the December 1998 seasonally adjusted estimate by $10.0 \%$.

The percentage change of $10.0 \%$ was chosen because the average absolute percentage change, based on the last decade, has been $10.0 \%$.

An increase of $10 \%$ in seasonally adjusted company profits before income tax in the March 1988 quarter would show an increase of $3.3 \%$ in the trend estimate from the December 1998 quarter. A fall of this magnitude would result in the trend being revised to reflect a decrease of $2.5 \%$ in the March 1999 quarter.

## COMPANY PROFITS BEFORE INCOME TAX BY INDUSTRY: Trend

## MINING

MANUFACTURING

WHOLESALE/RETAIL

OTHER SELECTED INDUSTRIES(a)

TOTAL ALL INDUSTRIES
(a) This includes Construction, Transport \& storage, Services to finance \& insurance, Property \& business services, and Other senvices.

The Mining trend estimate has been decreasing since September 1996. The current quarter is the lowest reported quarterly profit since March 1989.

The trend estimate for Manufacturing grew at increasing rates between December 1996 and December 1997 but has been reasonably flat for the past three quarters.

The trend estimate for Wholesale has been negative or relatively flat over the past five quarters. The trend estimate for Retail recorded strong growth in the three quarters to December 1998.

The trend estimate for Other selected industries is flat this quarter following four quarters of increases.

The All industries trend estimate has risen for each of the past five quarters.

## EXPLANATORYNOTES

| Introduction | 1 This publication presents preliminary estimates of company profits based on Management accounts for selected industries in Australia. The series have been compiled from data collected by the Australian Bureau of Statistics (ABS) in its quarterly Survey of Company Profits. |
| :---: | :---: |
| SCOPE AND COVERAGE | 2 The survey is designed to measure profits, depreciation and net interest paid of companies (i.e. incorporated business enterprises) in the private sector in Australia. |
|  | 3 The data in this publication relate to companies employing more than 30 people. |
|  | 4 The scope of the survey: |
|  | - includes the following industries (Australian and New Zealand Standard Industrial Classification [ANZSIC] Divisions, Subdivisions and Groups): Mining (Division B) |
|  | Manufacturing (Division C) |
|  | Food, beverages and tobacco (21) |
|  | Textiles, clothing, footwear and leather (22) |
|  | Wood and paper products (23) |
|  | Printing, publishing and recorded media (24) |
|  | Petroleum, coal, chemical and associated products (25) |
|  | Non-metallic mineral products (26) |
|  | Metal products (27) |
|  | Machinery and equipment (28) |
|  | Other manufacturing (29) |
|  | Construction (Division E) |
|  | Wholesale trade (Division F) |
|  | Retail trade (Division G) |
|  | Transport and storage (Division I) |
|  | Other financiers (733) |
|  | Financial asset investors (734) |
|  | Services to finance and insurance (75) |
|  | Property and business services (Division L) |
|  | Other services including |
|  | Electricity, gas and water supply (Division D) |
|  | Accommodation, cafes and restaurants (Division H) |
|  | Communication services (Division J) |
|  | Cultural and recreational services (Division P excluding 921 and 922) |
|  | Personal services (95) |
|  | - excludes the following industries |
|  | Agriculture, forestry and fishing (Division A) |
|  | Central bank and Deposit taking financiers (731-732) |
|  | Insurance (74) |
|  | Government administration and defence (Division M) |
|  | Education (Division N) |
|  | Health and community services (Division O) |
|  | Other services (96) |
|  | Private households employing staff (97) |
|  | - the scope excludes public sector business units (i.e. all departments, authorities and other organisations owned and/or controlled by the |
|  | Commonwealth, State and Local Governments). Primary producer marketing boards are classified as public sector and are also excluded. |

## EXPLANATORY NOTES

SURVEY METHODOLOGY

5 Prior to the September quarter 1996 survey, the survey frames and samples were revised annually to ensure that they remained representative of the survey population. From the September quarter 1996 survey, the survey frames and samples are being revised each quarter. The aim is to further improve the quality of the survey estimates by selecting a sample which will be more representative of the survey population. Additionally, the timing of sample selection will now be consistent with other ABS surveys. This will lead to greater consistency when comparing data across these surveys.
6 With these revisions to the sample, some of the business units from the sampled sector are rotated out of the survey and are replaced by others, to spread the reporting workload equitably. The rate of rotation under quarterly sample selection is slightly higher than one quarter of the previous annual rate of rotation.

7 In the period between sample selections, there are changes to the survey frame. For example, businesses cease operating and businesses are newly established. The ABS produces an estimate of the contribution expected from new businesses each quarter, while allowance is made for the number of businesses in the sample which ceased trading during the quarter. For most quarters, the introduction of the quarterly sample selection reduces the size of the adjustments needed to account for new and ceased businesses.

8 For the Survey of Company Profits, which excludes businesses employing 30 or less people from published estimates, the effect of the adjustment for new businesses is relatively minor as the majority of new businesses tend to be small in size and outside the scope of this survey. The incidence of new, larger businesses commencing operation is less common. The adjustment for new businesses represents about $0.25 \%$ of the total estimate of company profits before income tax.

9 The survey is conducted by mail on a quarterly basis. Forms are sent to a sample of approximately 3,800 business units employing more than 30 people. The sample is selected from the ABS central register of businesses and is stratified by industry, number of employees and, from the March 1997 quarter, by State/Territory. All business units with over 250 employees and/or a known large profit/loss are included in the sample.
10 Respondents are asked to provide data on the same basis as their own management accounts. Where a particular business unit does not respond in a given survey, an estimate is substituted. Revisions may be made to these estimates if data are provided subsequently from those businesses. Aggregates are calculated from all data using the number raised estimation technique. Data are edited both at individual business unit level and at aggregate level.

11 The survey uses the management unit as the statistical unit. The management unit is the highest-level accounting unit within a business, having regard to industry homogeneity, for which accounts are maintained. In nearly all cases it coincides with the legal entity owning the business (i.e. company, etc). In the case of large diversified businesses, however, there may be more than one management unit, each coinciding with a 'division' or 'line of business'. A division or line of business is recognised where separate and comprehensive accounts are compiled for it. Prior to 1989 , the survey used a different statistical unit. Further details are available on request.

## EXPLANATORY NOTES

12 The Australian and New Zealand Standard Industrial Classification (ANZSIC) has been developed for use in both countries for the production and analysis of industry statistics. It replaces the Australian Standard Industrial Classification (ASIC) and the New Zealand Standard Industrial Classification (NZSIC).

13 For more information, users are referred to Australian and New Zealand Standard Industrial Classification, 1993, ANZSIC, ABS Cat. No. 1292.0 and New Zealand Cat No. 19.005.0092.

14 In order to classify company profits by industry, each statistical unit (as defined above) is classified to the Australian and New Zealand Standard Industrial Classification (ANZSIC) industry in which it mainly operates.

15 Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences can be more clearly recognised.

16 In the seasonal adjustment of the series, account has been taken of both normal seasonal factors and 'trading day' effects (arising from the varying length of each month and the varying numbers of Sundays, Mondays, Tuesdays, etc. in the month). Adjustment has also been made for the influence of Easter which may affect the March and June quarter estimates.

17 Seasonal adjustment does not remove from the series the effect of irregular or non-seasonal influences (e.g. a change in interest rates). Particular care should be taken in interpreting quarterly movements in the adjusted figures in this publication, especially for detailed industry estimates.

18 Irregular influences that are highly volatile can make it difficult to interpret the series even after the adjustment for seasonal variation.

19 Seasonal factors have been revised concurrently since September quarter 1997 to take account of the latest original data. A more detailed review is conducted annually. The nature of the seasonal adjustment process is such that the magnitude of some revisions resulting from each adjustment may be quite significant, especially for data for more recent quarters. For this reason additional care should be exercised when interpreting movements in seasonally adjusted data for recent quarters.

20 The seasonally adjusted figures necessarily reflect the sampling and other errors to which the original figures are subject.

21 The trend estimates are derived by applying a 7-term Henderson moving average to the seasonally adjusted series. The 7-term Henderson average (like all Henderson averages) is symmetric but, as the end of a time series is approached, asymmetric forms of the average are applied. Unlike the weights of the standard 7-term Henderson moving average, the weights employed here have been tailored to suit the particular characteristics of individual series. While the asymmetric weights enable trend estimates for recent quarters to be produced, it does result in revisions to the estimates for the most recent three quarters as additional observations become available. There may also be revisions because of changes in the original data and as a result of the re-estimation of the seasonal factors. For further information, see A Guide to Interpreting Time Series-Monitoring 'Trends': an Overview (1348.0) or contact the Assistant Director, Time Series Analysis on (02) 62526345.

## EXPLANATORYNOTES

## DESCRIPTION OF TERMS

22 A description of the terms used in this publication is given below:

A company An incorporated private sector business enterprise. For the purpose of the survey, branches of overseas companies operating in Australia are included but overseas branches of Australian companies are excluded.

## Company profits before

 income taxNet interest paid
Net operating profit or loss before income tax and extraordinary items and is net of capital profits or losses and dividends received.

Interest expense less any interest income. Interest received from or paid to overseas sources is included. The interest component of finance lease payments is also included.

## Depreciation of fixed assets

This is as per management accounts and includes depreciation on equipment acquired under a finance lease.

23 The series ‘Company Profits Before Income Tax, Net Interest Paid and Depreciation' equates, broadly, with the national accounting series of 'Gross Operating Surplus of Private Corporate Trading Enterprises'. However, the two series are not directly comparable for the following reasons:

- the national accounts' estimates of gross operating surplus include the profits of all companies whereas results from the Survey of Company Profits relate only to those companies with employment of more than 30 persons
- the national accounts' estimates of gross operating surplus include estimates for companies classified to the agriculture, forestry, fishing and hunting, and community services industries
- the national accounts' estimates of gross operating surplus are after deduction of the stock valuation adjustment which measures the portion of income attributable to holding gains or losses resulting from stock valuation practices
- the national accounts' estimates of gross operating surplus include details relating to net third party insurance transfers, royalty and land rent payments
- the national accounts' estimates incorporate data from other sources such as taxation data as well as information from the Survey of Company Profits.

24 More detailed industry data from this survey are available on request, the cost for such a service being dependent upon the amount of data requested.

25 Users may also wish to refer to the following publications:

## STANDARD ERRORS

INTRODUCTION

LEVEL ESTIMATES

The estimates in this publication are based on a sample drawn from units in the surveyed population. Because the entire population is not surveyed, the published estimates are subject to sampling error. The most common way of quantifying such sampling error is to calculate the standard error for the published estimate or statistic.

To illustrate, let us say that the published level estimate for company profits before income tax is $\$ 5,900 \mathrm{~m}$ and the calculated standard error in this case is $\$ 140 \mathrm{~m}$. The standard error is then used to interpret the level estimate of $\$ 5,900 \mathrm{~m}$.

For instance, the standard error of $\$ 140 \mathrm{~m}$ indicates that:

- There are approximately two chances in three that the real value falls within the range $\$ 5,760 \mathrm{~m}$ to $\$ 6,040 \mathrm{~m}(\$ 5,900 \mathrm{~m} \pm \$ 140 \mathrm{~m})$
- There are approximately nineteen chances in twenty that the real value falls within the ranges $\$ 5,620 \mathrm{~m}$ and $\$ 6,180 \mathrm{~m}(\$ 5,900 \mathrm{~m} \pm \$ 280 \mathrm{~m})$

The real value in this case is the result we would obtain if we could enumerate the total population.

The following table shows the standard errors for national quarterly level estimates. These standard errors are based on a smoothed average of profits estimates.

|  | Company profits before income tax \$m | Company profits before income tax, net interest paid \$m | Company profits before income tax, net interest paid and depreciation \$m |
| :---: | :---: | :---: | :---: |
| Mining | 5 | 10 | 12 |
| Manufacturing |  |  |  |
| Food, beverages and tobacco | 13 | 13 | 20 |
| Textiles, clothing, footwear and leather | 3 | 4 | 4 |
| Wood and paper products | 12 | 14 | 18 |
| Printing, publishing and recorded media | 16 | 17 | 19 |
| Petroleum, coal, chemical and assoc. products | 33 | 35 | 40 |
| Non-metallic mineral products | 11 | 10 | 11 |
| Metal products | 13 | 13 | 15 |
| Machinery and equipment | 34 | 34 | 36 |
| Other manufacturing | 11 | 11 | 12 |
| Total manufacturing | 59 | 60 | 68 |
| Construction | 28 | 36 | 53 |
| Wholesale trade | 64 | 62 | 65 |
| Retail trade | 30 | 29 | 35 |
| Transport and storage | 43 | 44 | 53 |
| Services to finance and insurance | 38 | 91 | 41 |
| Property and business services | 77 | 72 | 82 |
| Other services | 30 | 30 | 35 |
| Total | 139 | 161 | 159 |

## STANDARD ERRORS

The following example illustrates how to use the standard error to interpret a movement estimate. Let us say that one quarter the published level estimate for company profits before income tax is $\$ 5,900 \mathrm{~m}$, and the next quarter the published level estimate is $\$ 6,300 \mathrm{~m}$. In this example the calculated standard error for the movement estimate is $\$ 145 \mathrm{~m}$. The standard error is then used to interpret the published movement estimate of $+\$ 400 \mathrm{~m}$.

For instance, the standard error of $\$ 145 \mathrm{~m}$ indicates that:

- There are approximately two chances in three that the real movement over the two quarter period falls within the range $\$ 255 \mathrm{~m}$ to $\$ 545 \mathrm{~m}(\$ 400 \mathrm{~m} \pm \$ 145 \mathrm{~m})$
- There are approximately nineteen chances in twenty that the real movement falls within the range $\$ 110 \mathrm{~m}$ to $\$ 690 \mathrm{~m}$ ( $\$ 400 \mathrm{~m} \pm \$ 290 \mathrm{~m}$ )

The following table shows the standard errors for national quarterly movement estimates. These standard errors are based on a smoothed average of profits estimates.

|  | Company profits before income tax \$m | Company profits before income tax, net interest paid \$m | Company profits before income tax, net interest paid and depreciation \$m |
| :---: | :---: | :---: | :---: |
| Mining | 9 | 12 | 16 |
| Manufacturing |  |  |  |
| Food, beverages and tobacco | 15 | 17 | 26 |
| Textiles, clothing, footwear and leather | 4 | 4 | 5 |
| Wood and paper products | 14 | 16 | 19 |
| Printing, publishing and recorded media | 17 | 18 | 20 |
| Petroleum, coal, chemical and assoc. products | 32 | 32 | 36 |
| Non-metallic mineral products | 10 | 9 | 10 |
| Metal products | 16 | 16 | 19 |
| Machinery and equipment | 37 | 38 | 40 |
| Other manufacturing | 14 | 14 | 15 |
| Total manufacturing | 62 | 62 | 69 |
| Construction | 35 | 36 | 51 |
| Wholesale trade | 67 | 66 | 68 |
| Retail trade | 32 | 31 | 33 |
| Transport and storage | 43 | 46 | 56 |
| Services to finance and insurance | 31 | 71 | 34 |
| Property and business services | 77 | 65 | 72 |
| Other services | 40 | 39 | 55 |
| Total | 145 | 153 | 161 |
