NOTES

FORTHCOMING ISSUES ISSUE (Quarter) EXPECTED RELEASE DATE

> February 2001 27 April 2001 May 2001 27 July 2001

ABOUT THIS PUBLICATION

This publication contains estimates of the civilian labour force in New South Wales (NSW) and the Australian Capital Territory (ACT) derived from the Labour Force Survey (LFS) component of the Monthly Population Survey, which is conducted on a sample basis throughout Australia. Explanatory notes for data contained in this publication can be found on page 46. Care should be taken in the interpretation of month-to-month movements in the estimates. Survey estimates are subject to sampling and non-sampling variability as explained in the Technical note on data reliability on page 58.

SUMMARY OF FINDINGS—NEW SOUTH WALES

TREND ESTIMATES

Employed persons

The trend estimate of employed persons has risen steadily since July 1997 to reach a peak in July 2000. Since then it has declined to 3,036,700 in November 2000.

Unemployed persons

The trend estimate of unemployed persons in NSW peaked at 244,000 in April 1997. Since then it has fallen steadily and reached 179,000 in November 2000.

Unemployment rate

The trend unemployment rate in NSW reached a high of 8.0% in April 1997. Since then it has fallen steadily to reach 5.6% in November 2000.

Participation rate and labour force

The trend estimate of the participation rate in NSW remained fairly steady throughout most of 1999. In 2000 it rose steadily through to the middle of the year, before falling to 62.2% in November 2000.

The trend estimated labour force in NSW remained fairly steady over the period from August 1998 to January 1999. Since then it has risen steadily during the middle of 2000 before declining again to reach 3,215,700 in November 2000.

SEASONALLY ADJUSTED **ESTIMATES**

The seasonally adjusted estimate of employment in NSW rose steadily to reach a peak in August 2000, before declining to 3,013,800 in November 2000. The seasonally adjusted estimate of the number of unemployed moved downward in 2000, before a rise to 185,400 in November 2000. The seasonally adjusted estimate of the unemployment rate also moved downwards in 2000, before a slight rise to 5.8% in November 2000.

REGIONS OF NSW

While the Labour Force Survey (LFS) is designed primarily to produce reliable estimates at the national and State/Territory level, it also delivers estimates for a number of regions within States. As with national and State estimates, regional labour force estimates are subject to sampling error. Since estimates for regions are components of corresponding estimates at the State level — and are thus based on a considerably smaller sample size — they are subject to higher relative standard errors. Care should therefore be taken in interpretation of regional estimates, particularly month-to-month movements.

Sydney

There were 2,005,400 employed people in the Sydney Major Statistical Region (MSR) in November 2000, a rise of 38,800 over the year from November 1999. Between November 1999 and November 2000, the unemployment rate rose from 3.9% to 4.5%.

Regional unemployment rates within the Sydney MSR in November 2000 ranged from 1.7% in Lower Northern Sydney Statistical Region (SR) to 9.3% in Gosford-Wyong SR. Participation rates varied from 54.9% in Canterbury-Bankstown SR to 69.0% in Lower Northern Sydney SR.

Balance of NSW

There were 1,012,800 employed people in Balance of NSW MSR in November 2000, 14,300 more than in November 1999. The unemployment rate in November 2000 was 7.4%, a decrease of 0.6 percentage points on the figure recorded in November 1999.

Unemployment rates ranged from 4.7% in the Murray-Murrumbidgee SR to 12.5% in the Richmond-Tweed and Mid-North Coast SRs. Participation rates varied from 54.1% in the Richmond-Tweed and Mid-North Coast SRs to 66.4% in the Murray–Murrumbidgee SR.

UNEMPLOYMENT RATE, SYDNEY MSR, NOVEMBER 2000

UNEMPLOYMENT RATE, BALANCE OF NSW MSR, NOVEMBER 2000

INDUSTRY AND OCCUPATION

The industry in NSW with the highest gain in employment in the year to November 2000 was Property and business services with an increase of 52,300 persons or 15.7%. The largest fall occurred in the Wholesale trade sector, down 32,700 persons or 17.0%.

The industries with the highest employment in November 2000 were Retail trade with 437,400 persons (14.5% of total employed persons in NSW) and Property and business services with 385,900 persons (12.8% of total employed).

The major occupation group with the largest annual gain in employment in the year to November 2000 was Intermediate clerical, sales and service workers with an increase of 49,200 persons (9.5%) while the largest percentage fall was in the Tradespersons and related workers group, down by 25,500 persons or 6.3%.

AGE

The unemployment rate at November 2000 decreased with age from 15.9% for 15-19 year olds to 3.5% for the 45-54 years age group. The rate for the age group 55 years and over was 3.2%.

BIRTHPLACE

In November 2000, the unemployment rate for Australian-born people in NSW was 5.4%. For those born overseas in the main English-speaking countries the rate was 4.2% while for those born in other countries it was 6.4%.

DURATION OF UNEMPLOYMENT

In November 2000, the average (mean) duration of unemployment was 49.7 weeks and the median duration of unemployment was 14 weeks. More than 17% of all unemployed persons had been unemployed for two years or more.

Average duration of unemployment

SUMMARY OF FINDINGS—AUSTRALIAN CAPITAL TERRITORY

TREND ESTIMATES

Employed persons

The trend estimate of employed persons in the ACT has been rising steadily since October 1998 and in November 2000 was 171,700.

Unemployed persons

From a peak of 13,500 in October 1997, the trend estimate of unemployment in the ACT moved gradually downwards. It reached 8,000 in November 2000.

Unemployment rate

The trend unemployment rate in the ACT fell steadily since October 1997 to reach 4.4% in November 2000.

Participation rate and labour force The ACT trend participation rate rose gradually throughout the last half of 2000 reaching 73.8% in November 2000. The trend labour force estimate was 179,700 in November 2000.

INDUSTRY AND OCCUPATION

There was an average of 36,600 people employed in Government administration and defence in the ACT for the year ending November 2000, a decrease of 3,100 on the average for the previous year. This industry sector accounted for 21.7% of total employment in the ACT in November 2000. Property and business services accounted for 14.3% of total employment.

For the year ending November 2000, the largest occupation group in the ACT was Professionals. This group had an average of 45,000 employed persons over the year, constituting 26.7% of the total number of employed persons.

AGE

In November 2000, the proportion of employed people working part-time in the ACT ranged from 78.6% of 15-19 year olds to 19.9% of those aged 25 years and over. The average weekly hours worked by employed persons in the age group 15-19 years was 17.1 while those in the age group 25 years and over worked an average of 36.0 hours. The unemployment rates for these age groups was 16.0% and 3.1%, respectively.

Unemployment rate by age

DURATION OF UNEMPLOYMENT

The average duration of unemployment in the ACT in November 2000 was 57.1 weeks. The average has ranged between 31 and 57 weeks over the past year.

Average duration of unemployment

⁽a) While the Labour Force Survey is designed primarily to produce reliable estimates at the national and State/Territory level, it also delivers estimates for a number of regions within States. As with national and State estimates, regional labour force estimates are subject to sampling error. Since estimates for regions are components of corresponding estimates at the State level — and are thus based on a considerably smaller sample size — they are subject to higher relative standard error. Care should therefore be taken in interpretation of regional estimates, particularly month to month movements. Tables of standard errors are included in the Technical Note on pages 59-64 of this publication. Regional estimates from September 1997 onward may not be directly comparable with those before September 1997 because a new sample has been selected which may have different characteristics to the old. (b) New region from September 1997. (c) Estimates for the South Eastern (SR) are not published separately. Data for the South Eastern (SR) are included in ACT and South Eastern (SRs) and in Illawarra and South Eastern (SRs). (d) From September 1997 includes Far West Statistical Division, previously excluded. Break in the series from September 1997.

EXPLANATORY NOTES

INTRODUCTION

1 This publication contains estimates of the labour force derived from the Labour Force Survey (LFS) component of the monthly population survey, which is conducted on a sample basis throughout Australia.

THE POPULATION SURVEY

This survey consists of the LFS and, in most months, one or more supplementary topics. The survey is based on a multi-stage area sample of private dwellings (houses, flats, etc.) and non-private dwellings (hotels, motels, etc.) and covers 1 in 300 of the population of NSW. The information is obtained from the occupants of selected dwellings by specially trained interviewers. The interviews are generally conducted during the two weeks beginning on the Monday between the 6th and 12th of each month. The information obtained relates to the week before the interview (i.e. the reference week).

TELEPHONE INTERVIEWING

The ABS has introduced the use of telephone interviewing into the LFS. Households selected for the LFS are interviewed each month for eight months, with one-eighth of the sample being replaced each month. The first interview is conducted face-to-face with subsequent interviews conducted by telephone (if acceptable to the respondent). Telephone interviewing was phased in from August 1996 to February 1997.

SCOPE

- The LFS includes all persons aged 15 years and over, except:
- members of the permanent defence forces;
- certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations;
- overseas residents in Australia; and
- members of non-Australian defence forces (and their dependants) stationed in Australia.

SURVEY SAMPLE REDESIGN

- The LFS sample was reselected using information collected in the 1996 Census of Population and Housing. The new sample was phased in over the eight-month period from September 1997 to April 1998.
- For further details, see Information Paper: Labour Force Survey Sample Design (Cat. no. 6269.0).

POPULATION BENCHMARKS

LFS estimates are calculated in such a way as to add up to independent estimates of the civilian population aged 15 and over (population benchmarks). From February 1999, labour force estimates have been compiled using benchmarks based on the results of the 1996 Census of Population and Housing. Small revisions were made to many of the historical estimates from January 1995 to January 1999.

DEFINITIONS

- **8** The labour force category to which a person is assigned depends on the actual activity undertaken during the reference week (i.e. whether working, looking for work, etc.). The following definitions, which conform closely to the international standard definitions specified by the International Labour Office (ILO), relate only to those persons within the scope of the survey.
- **9** *Employed persons* comprise civilians aged 15 years and over who, during the reference week:
- worked for one hour or more for pay, profit, commission or payment in kind (including employees, employers and own account workers) in a job or business, or on a farm; or
- worked for one hour or more without pay in a family business or on a farm (i.e. contributing family workers); or
- were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the reference week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the reference week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or
- were employers, own account workers or contributing family workers who had a job, business or farm, but were not at work.
- **10** Prior to April 1986, contributing family workers who worked for 1–14 hours were excluded from the category of employed persons.
- **11** Employed persons can be classified into:
- *full-time workers*, i.e. those who usually worked 35 hours or more a week (in all jobs) and those who, although usually part-time workers, worked 35 hours or more during the reference week; and
- part-time workers, i.e. those who usually worked less than 35 hours a week and who did so during the reference week.
- 12 *Unemployed persons* are those aged 15 years and over who were not employed during the reference week, and:
- had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week, and:
 - were available for work in the reference week, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the reference week); or
 - were waiting to start a new job within four weeks from the end of the reference week and would have started in the reference week if the job had been available then; or

DEFINITIONS continued

- were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the reference week (including the whole of the reference week) for reasons other than bad weather or plant breakdown.
- **13** Actively looking for work includes writing, telephoning or applying in person to an employer for work; answering an advertisement for a job; checking factory notice-boards or the touchscreens at the Centrelink offices; being registered with Centrelink as a jobseeker; checking or registering with any other employment agency; advertising or tendering for work; and contacting friends or relatives.
- **14** The unemployment rate for any group is the number of unemployed persons expressed as a percentage of the labour force in the same group.
- 15 The labour force comprises persons who were employed or unemployed as defined above.
- **16** Long-term unemployed comprises persons unemployed for a period of 52 weeks or more.
- 17 Persons not in the labour force are those who, during the reference week, were not in the categories employed or unemployed as defined above.
- **18** The participation rate for any group is the labour force expressed as a percentage of the civilian population aged 15 years and over in the same group.
- **19** Duration of unemployment is the period from the time the person began looking for work or was stood down to the end of the reference week.
- **20** Unemployed persons classified by industry and occupation. Unemployed persons who had worked full-time for two weeks or more in the last two years are classified according to the industry and occupation of their most recent full-time job.
- 21 Industry classification. From August 1994, LFS industry data have been classified according to the Australian and New Zealand Standard Industrial Classification (ANZSIC), 1993 (Cat. no. 1292.0).
- **22** Occupation classification. From August 1996, occupation data have been classified according to the Australian Standard Classification of Occupations (ASCO), Second Edition (Cat. no. 1220.0).
- 23 Marital status. In the LFS, persons are classified as married or not married. Persons are classified as married if they are reported as being married (including de facto) and their spouse was a usual resident of the household at the time of the survey.

DEFINITIONS continued

- **24** Persons attending school or a tertiary educational institution. Persons attending school comprise those aged 15-19 years who, during the reference week, were enrolled full-time at secondary or high schools. Persons attending a tertiary educational institution comprise those aged 15-24 years who were enrolled full-time at universities, other institutions of higher education, TAFE colleges and theological colleges.
- **25** Employment/population ratio. For any group, the number of employed persons expressed as a percentage of the civilian population aged 15 years and over in the same group.

STATISTICAL AREAS

- 26 The regional structure for NSW used in tables 16–19 is based on the Statistical Region structure of the Australian Standard Geographical Classification (ASGC) (Cat. no. 1216.0).
- 27 Changes were made to labour force regions in NSW from September 1997. Blacktown-Baulkham Hills SR was split up with Blacktown being merged with Outer Western Sydney SR to form Outer Western Sydney SR and Blacktown (C) and Baulkham Hills being merged with Hornsby-Ku-ring-gai SR to form Hornsby-Ku-ring-gai SR and Baulkham Hills (A). In addition, Northern, Far West-North Western and Central West SRs now include the Far West Statistical Division, previously excluded. This has resulted in a series break in the data for this area.
- 28 For further details, see Information Paper: Regional Labour Force Statistics, September 1997 (Cat. no. 6262.0).

SEASONAL ADJUSTMENT AND TREND ESTIMATION

- **29** Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised.
- 30 Smoothing seasonally adjusted series produces a measure of the underlying trend by reducing the impact of the irregular component of the series. The trend estimates are derived by applying a 13-term Henderson-weighted moving average to the respective seasonally adjusted series. While this smoothing technique enables estimates to be produced which include the latest month, it does result in revisions to the most recent months as additional observations become available.
- **31** Seasonally adjusted series for NSW appear in table 2. Trend estimates for NSW and ACT appear in tables 2 and 21 respectively. Seasonally adjusted data is not available for the ACT.

RELIABILITY OF THE **ESTIMATES**

32 Estimates are subject to sampling and non-sampling errors. See the Technical note on pages 58-60 for more information.

RELATED PUBLICATIONS

- **33** Users may also wish to refer to the following related publications which are available from ABS Bookshops:

ADDITIONAL DATA

34 The ABS can also make available information which is not published. In general, a charge is made for providing unpublished information.

ROUNDING

35 Figures have been rounded and discrepancies may occur between sums of the component items and the totals shown.

APPENDIX

SUPPLEMENTARY TOPICS

Although emphasis in the population survey is placed on the regular collection of data on demographic and labour force characteristics, supplementary and special surveys of particular aspects of the labour force are carried out from time to time.

It was ABS practice to release statistics from supplementary and special surveys in Labour Force, Australia (Cat. no. 6203.0). This practice ceased with the release of the February 1996 issue of Labour Force, Australia. For future releases of supplementary labour data, separate publications containing summary results and key findings will be produced.

Equivalent tables at the State level are available on microfiche. In addition, other unpublished data can be provided to meet special requirements.

TECHNICAL NOTE: DATA RELIABILITY

Standard errors of estimates

SOURCES OF ERROR There are a number of possible sources of error in sample surveys and

these can be classified into two types: sampling error; and non-sampling

error.

NON-SAMPLING ERRORS Non-sampling errors may arise as a result of errors in the reporting,

> recording or processing of the data and can occur even if there is a complete enumeration of the population. Non-sampling errors can be introduced through: inadequacies in the questionnaire; non-response; inaccurate reporting by respondents; errors in the application of survey procedures; incorrect recording of answers; and errors in data entry and

processing.

It is difficult to measure the size of the non-sampling errors and the extent of these errors could vary considerably in significance from survey to survey, and from question to question. However, every effort is made in the design of the survey and development of survey procedures to

minimise the effect of these errors.

SAMPLING ERRORS Sampling error is the error which occurs by chance because the data

were only obtained from a sample, not the entire population.

One measure of the variability of estimates which occurs as a result of surveying only a sample of the population is the standard error (SE). There are about two chances in three that a survey estimate is within

one standard error of the figure that would have been obtained if all persons had been included and about 19 chances in 20 that it is within two standard errors. That is, there are 19 chances in 20 that the true

estimate is in the range:

X - 2xSE(X) to X + 2xSE(X)

(where *X* is the estimate)

The standard error of an estimate can be obtained from the tables on pages 61-63. Linear interpolation should be used to calculate the standard error of estimates falling between the sizes of estimates listed in

the table (see example on page 60).

In the tables in this publication, only estimates with relative standard errors of 25% or less, and percentages based on such estimates, are considered sufficiently reliable for most purposes. However, estimates and percentages with larger relative standard errors have been included and are preceded by an asterisk (e.g. *3.4) to indicate they are subject to high standard errors and should be used with caution.

Standard errors of estimates continued The standard error can also be expressed as a percentage of the estimate and this is known as the relative standard error (RSE). The RSE is determined by dividing the standard error of an estimate SE(X) by the estimate X and expressing it as a percentage. That is:

$$RSE(X) = \frac{SE(X) \times 100}{X}$$

(where *X* is the estimate)

The look up list on the following page provides a guide for the calculation of standard errors and relative standard errors for a range of statistics.

CALCULATING STANDARD **ERRORS**

The methods described below refer to the calculation of standard errors for NSW estimates. Standard errors of ACT estimates should be calculated from the table on page 63.

MEASURE OF RELIABILITY TO BE DETERMINED	METHOD
Standard errors of estimates of employed persons.	Determine the SE from the table on page 61 directly.
Standard errors of estimates of unemployed persons.	Multiply the SE from the table on page 61 by 1.06.
Standard errors of estimates of persons not in the labour force.	Multiply the SE from the table on page 61 by 1.1.
Standard errors of rates (e.g. the unemployment rate which is based on the number of unemployed persons expressed as a percentage of the number of persons in the labour force).	Determine the RSE of the numerator (<i>X</i>) and the denominator (<i>Y</i>) then apply the following formula: RSE $\left(\frac{X}{Y}\right) = \sqrt{\left[\text{RSE}(X)\right]^2 - \left[\text{RSE}(Y)\right]^2}$
Standard error of average duration of unemployment.	Determine the RSE for the number of persons on which the average is based and multiply this by 1.3.
Standard error of median duration of unemployment.	Determine the RSE for the number of persons on which the average is based and multiply this by 2.0.
Standard error of monthly movements.	From the table on page 62, look up the SE of the larger estimate.
Standard error of quarterly movements.	Determine the standard error of the larger estimate from the table on page 61 and multiply this by 1.11.
Standard error of annual movements.	Determine the standard error of the larger estimate from the table on page 61 and multiply this by 1.3.

LINEAR INTERPOLATION

Linear interpolation is used to determine the standard error of an estimate which falls between two values listed in the size of estimate column in the tables on page 61 or 63. Linear interpolation is best described using an example. In November 2000, there were 741,300 (Xe) employed persons working part-time in NSW. This estimate falls between the values $500,000 (X_l)$ and $1,000,000 (X_u)$ in the table on page 61.

The standard error of the estimate is determined as follows. Firstly calculate

$$F = \frac{X_e - X_l}{X_u - X_l}$$

$$= \frac{741,300 - 500,000}{1,000,000 - 500,000}$$

$$= 0.48$$

Secondly, calculate the standard error of the estimate, $SE(X_e)$ thus:

$$SE(X_e) = SE(X_t) + (F \times [SE(X_u) - SE(X_t)])$$

$$= 8,350 + (0.48 \times [11,650 - 8,350])$$

$$= 9,934$$

Therefore the standard error of the number of employed persons working part-time in NSW in November 2000 is 10,000.
