| FORTHCOMING ISSUES | Issue June 2000 July 2000 August 2000 September 2000 October 2000 November 2000 | Release Date 28 July 2000 25 August 2000 29 September 2000 27 October 2000 24 November 2000 22 December 2000 | | | | | | | |
|--------------------|--|--|--------------------------|--|--|--|--|--|--|
| CHANGES THIS MONTH | The Labour Force Survey (LFS) questionnaire is being redesigned to better reflect current labour market phenomena and contemporary user needs. The new questionnaire is scheduled to be implemented in March and April 2001. More information is available in <i>Information Paper:</i> <i>Labour Force Survey Questionnaire Redesign</i> (Cat no. 6294.0), which was released on 14 March 2000. | | | | | | | | |
| | With the redesigned questionnaire, the frequency of collecting and publishing underemployment data and last job details of unemployed persons will be reduced from monthly to quarterly (February, May, August and November). The change to quarterly publication of these tables takes effect from February 2000. This has resulted in the following changes to the content of this publication: | | | | | | | | |
| | TABLE NO. IN FEBRUARY 2000 | | TABLE NO. IN MAY 2000 | | | | | | |

STATUS IN EMPLOYMENT DATA CHANGES: CORRECTION

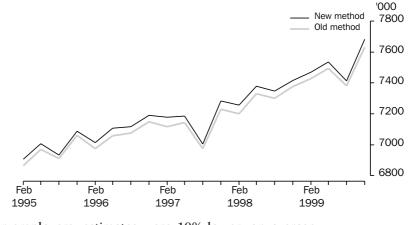

An article in the November 1999 issue of this publication described a change to status in employment coding. The impact of the change shown in that article was incorrect. This article provides correct estimates of the impact of the change in coding method.

| INTRODUCTION | The ABS has made changes to coding procedures for status in employment data from the February 2000 Labour Force Survey (LFS) onwards. As a result, estimates of employment classified by status in employment from February 2000 onwards are not strictly comparable with earlier data. |
|----------------------|--|
| | To enable estimates for periods prior to February 2000 to be compared with those for February 2000 and later surveys, this article shows employment estimates classified by both the old and the new coding methods. |
| STATUS IN EMPLOYMENT | Status in employment (<i>employee, employer, own account worker, or contributing family worker</i>) describes a person's employment arrangement in relation to their main job. It is collected in the mid-month of each quarter. |
| | In the LFS, status in employment is based on the person's self-perception of their relationship to the business in which they work, together with the legal status of the business (if it is the respondent's own business). Legal status is required because the owner-manager of an incorporated business is classed as an <i>employee</i> , whereas the owner-manager of an unincorporated business is classed as an <i>employer</i> or <i>own account</i> <i>worker</i> . This treatment ensures that LFS data are consistent with Australian National Accounts data. |
| | Respondents are asked whether they work for an employer or in their own business and, if in their own business, the name and address of the business and whether it is a limited liability company. |
| | In determining a person's status in employment, these responses were compared with the ABS Business Register. Where a person's own business was found on the Register, the legal status recorded on the Register was used where it differed from that provided by the respondent. |
| | From the February 2000 survey, respondents' answers alone have been used in determining the legal status of a business, that is, without recourse to the Business Register. |
| IMPACT ON ESTIMATES | Estimates classified by status in employment for the February 2000 survey onwards are not strictly comparable with those for earlier periods. To assess the likely impact of the change in coding method, the status in employment data were re-estimated for surveys from February 1995 onwards, using the new method. |

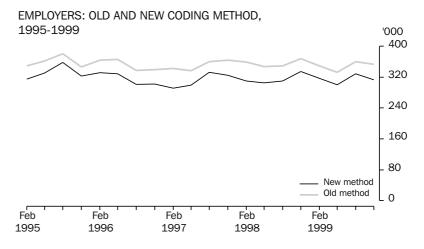

IMPACT ON ESTIMATES continued

This showed that, on average, estimates of employees by the new method were 0.6% higher than under the old method.

EMPLOYEES: OLD AND NEW CODING METHOD, 1995-1999

For employers, estimates were 10% lower, on average.

For Own account workers, estimates were 0.8% lower on average, while there was no impact on estimates for contributing family workers.

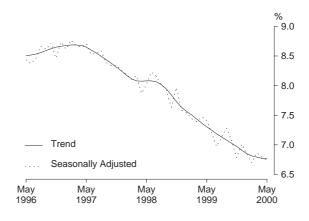

All status in employment differences were relatively steady over the analysis period.

FURTHER INFORMATIONFor more information about Labour Force Survey estimates classified by
status in employment, contact Peter Bradbury on Canberra
(02) 6252 6565, email peter.bradbury@abs.gov.au.

LABOUR MARKET IN BRIEF

TREND ESTIMATES The trend estimate of employed persons has been increasing steadily since May 1997, reaching 9,015,400 in May 2000. Both full-time and part-time employment have continued rising, reaching 6,650,400 and 2,365,000 respectively. The trend estimate of unemployment increased slightly, the first increase since June 1998, to stand at 654,400 in May 2000. The trend unemployment rate in May 2000 remained at 6.8%, with the male and female unemployment rates remaining at 6.7% and 6.9% respectively. The trend participation rate in May 2000 increased to 63.7%. The male participation rate remained at 72.7% while the female participation rate rose to 54.9%.

- EMPLOYMENTThe seasonally adjusted estimate of employment increased by 12,100 to
9,020,300 in May 2000. Full-time employment rose by 8,700 to 6,653,200,
with male full-time employment rising by 14,500 to 4,431,300 and female
full-time employment falling by 5,800 to 2,221,900. Part-time employment
rose by 3,400 to 2,367,100, with male part-time employment falling by
7,700 to 649,100 and female part-time employment increasing by 11,200
to 1,718,000.
- UNEMPLOYMENT The seasonally adjusted estimate of unemployment decreased by 4,400 to 652,100 in May 2000. The number of unemployed persons seeking full-time work rose by 8,300 to 491,400, with the number of females seeking full-time work rising by 7,800. The number of unemployed persons seeking part-time work fell by 12,700 to 160,700, with the number of males and females seeking part-time work falling by 6,100 and 6,600 respectively.
- UNEMPLOYMENT RATE The seasonally adjusted unemployment rate decreased by 0.1 percentage point to 6.7% in May 2000. The male unemployment rate fell by 0.1 percentage point to 6.7% and the female unemployment rate remained steady at 6.8%.

PARTICIPATION RATE

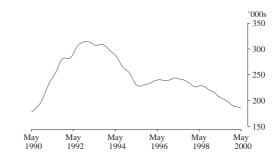

The seasonally adjusted labour force participation rate remained steady at 63.7% in May 2000. The male participation rate fell by 0.1 percentage point to 72.7% while the female participation rate remained steady at 54.9%.

SELECTED LABOUR FORCE SERIES

UNEMPLOYED PERSONS: TREND SERIES

New South Wales

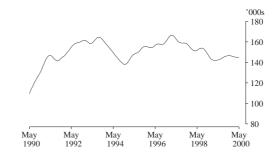

From a peak of 314,700 in January 1993, the trend estimate of unemployment in New South Wales fell rapidly to 228,900 in July 1995. The trend estimate then rose slowly for most of the period to March 1997, when it reached 244,100. The trend estimate has since generally fallen to stand at 186,000 in May 2000.

Victoria The trend estimate of unemployed persons in Victoria peaked at 274,300 in August 1993, before falling to 197,000 in June 1995. The trend estimate then remained relatively flat until June 1996. After rising slightly, the trend estimate has generally fallen and stood at 164,900 in May 2000.

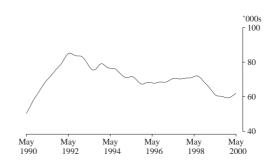

Queensland From 164,800 in September 1993 the trend estimate of unemployed persons in Queensland fell sharply to 138,100 in December 1994. The trend then rose to a peak of 166,700 in March 1997. Since then the trend estimate has generally fallen, and was 145,300 in May 2000.

UNEMPLOYED PERSONS: TREND SERIES

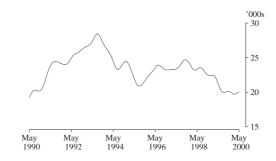

South Australia From a peak of 85,400 in June 1992 the trend estimate of unemployment for South Australia fell to 67,300 in November 1995. The trend then rose slowly to 72,200 in June 1998, before again falling to 59,400 in December 1999. Since then the trend estimate has shown a small increase, and stood at 62,200 in May 2000.

Western Australia The trend estimate of unemployment for Western Australia peaked at 91,300 in September 1992, before falling sharply to 66,400 in December 1994. The trend estimate has since remained relatively steady, and stood at 64,800 in May 2000.

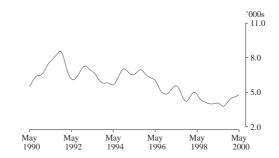

Tasmania The trend estimate of unemployment for Tasmania fell from a peak of 28,500 in August 1993, to 20,900 in August 1995. The trend estimate then rose to 24,700 in October 1997, and has since generally fallen to stand at 20,100 in May 2000.

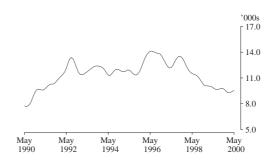

UNEMPLOYED PERSONS: TREND SERIES

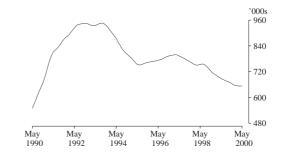

Northern Territory After peaking at 8,600 in November 1991, the trend estimate of unemployment in the Northern Territory generally fell to 3,800 in August 1999. Over recent months, the trend estimate has been rising and was 4,800 in May 2000.

Australian Capital Territory Between early 1993 and late 1995, the trend estimate of unemployment in the Australian Capital Territory remained relatively steady, before rising steeply to peak at 14,200 in June 1996. Apart from an increase in late 1997, the trend estimate has since generally fallen and stood at 9,600 in May 2000.

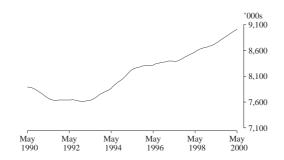

Australia The trend estimate of unemployed persons peaked at 946,800 in September 1993, before falling rapidly to 751,900 in June 1995. The trend then rose slowly for almost two years to 799,400 in March 1997. The trend estimate has generally been falling since March 1997, and was 654,400 in May 2000.

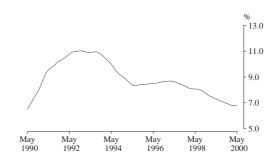

PRINCIPAL LABOUR FORCE SERIES: TREND ESTIMATES

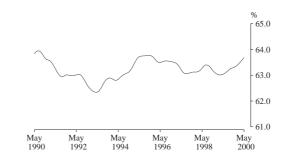

Employment The trend estimate of employed persons rose strongly from a low of 7,615,300 in January 1993 until mid 1995. The trend then continued to rise at a slower rate until May 1997. Since then, the trend estimate has shown stronger growth, to stand at 9,015,400 in May 2000.

Unemployment Rate After reaching a high of 11.0% in mid 1992, the trend unemployment rate remained steady for twelve months, before falling rapidly to 8.3% in July 1995. The trend then rose slowly, reaching 8.7% in March 1997. Apart from a small increase in mid 1998, the trend estimate has since decreased, and stood at 6.8% in May 2000.

Participation Rate From a peak of 64.0% in July 1990, the trend estimate of the participation rate fell to a low of 62.3% in April 1993. The trend rate then rose to 63.8% in late 1995, before generally declining to 63.0% in April 1999. The trend has since increased to stand at 63.7% in May 2000.

EXPLANATORY NOTES

| INTRODUCTION | 1 This publication contains estimates of the civilian labour force derived from the Labour Force Survey component of the Monthly Population Survey. Estimates of the labour force characteristics of family members and of family composition are also included. | | | | | | |
|---|--|--|--|--|--|--|--|
| | 2 Estimates of the civilian labour force are available for over 77 regions across Australia and are shown in various publications produced by State offices of the ABS. These data are also available as a special data service. For details, contact any ABS office. | | | | | | |
| | 3 Preliminary survey results are published in advance of this more detailed publication in <i>Labour Force, Australia, Preliminary</i> (6202.0). | | | | | | |
| | 4 Although emphasis in the population survey is placed on the regular collection of specific data on demographic and labour force characteristics of the population, supplementary and special surveys of particular aspects of the labour force or of other subjects are carried out from time to time. Statistics from these surveys are available on request. A list of survey publications on labour force and related topics appears at the end of this publication. | | | | | | |
| POPULATION SURVEY | 5 The population survey is based on a multi-stage area sample of private dwellings (currently about 30,000 houses, flats, etc.) and a list sample of non-private dwellings (hotels, motels, etc.), and covers about 0.5% of the population of Australia. The information is obtained from the occupants of selected dwellings by specially trained interviewers. The interviews are generally conducted during the two weeks beginning on the Monday between the 6th and 12th of each month. The information obtained relates to the week before the interview (i.e. the reference week). | | | | | | |
| INTRODUCTION OF TELEPHONE INTERVIEWING | 6 The ABS introduced the use of telephone interviewing into the Labour Force Survey over the period August 1996 to February 1997. Households selected for the Labour Force Survey are interviewed each month for eight months, with one-eighth of the sample being replaced each month. The first interview is conducted face-to-face. Subsequent interviews are then conducted by telephone (if acceptable to the respondent). The method was phased in by switching each incoming sample group over to telephone interviewing in its second month in the survey. | | | | | | |
| | 7 During the period of implementation, the new method produced different estimates than would have been obtained under the old methodology. The effect peaked in November 1996, when it is estimated that the published estimate of total employment was about 36,000 to 48,000 lower than would have been measured under the old methodology. The effect dissipated over the final months of implementation and was no longer discernible from February 1997. Therefore, the estimates for February 1997 and onwards are directly comparable to estimates for periods prior to August 1996. | | | | | | |

| SCOPE | 8 The Labour Force Survey includes all persons aged 15 and over except: | | | | | | |
|--------------------------------------|---|--|--|--|--|--|--|
| | members of the permanent defence forces; | | | | | | |
| | certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations; | | | | | | |
| | overseas residents in Australia; and | | | | | | |
| | members of non-Australian defence forces (and their dependants) stationed in Australia. | | | | | | |
| | From July 1993 Jervis Bay Territory has been excluded from the scope of the survey. Before July 1993 it was included in estimates for the Australian Capital Territory. | | | | | | |
| COVERAGE | 9 In the Labour Force Survey, coverage rules are applied which aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection. The chance of a person being enumerated at two separate dwellings in the one survey is considered to be negligible. See paragraph 45 for information about the effect of the coverage rules on family statistics. | | | | | | |
| | 10 Persons who are away from their usual residence for six weeks or less at the time of interview are enumerated at their usual residence (relevant information may be obtained from other usual residents present at the time of the survey). | | | | | | |
| POPULATION BENCHMARKS | 11 Labour Force Survey estimates of persons employed, unemployed and not in the labour force are calculated in such a way as to add up to the independently estimated distribution of the usually resident population aged 15 and over by age and sex. This procedure compensates for under-enumeration in the survey, and leads to more reliable estimates. Persons who, at the time of interview, are overseas for more than six weeks but for less than 12 months are included in the independent population statistics (benchmarks) and are thus provided for in the calculation of the estimates. The benchmarks are the latest available estimates at the time the Labour Force Survey is conducted, but they usually differ from the official population estimates subsequently published in <i>Australian Demographic Statistics</i> (3101.0) because they are derived from incomplete information about population changes. | | | | | | |
| REVISION OF POPULATION BENCHMARKS | 12 Survey estimates are not revised for the usually small amendments of population benchmarks arising from new data on deaths and overseas and internal migration. Revisions are made, however, after each Census of Population and Housing, and when population estimation bases are reviewed. These revisions affect original, seasonally adjusted and trend estimates. The last such revision was made in February 1999 to take account of the results of the 1996 Census of Population and Housing. This revision affected all the monthly estimates from January 1995 to January 1999. | | | | | | |

- REVISION OF POPULATION**13** Population benchmarks used in the estimation of Labour ForceBENCHMARKS continuedSurvey data are compiled according to place of usual residence. An
explanation of the place of usual residence conceptual basis for
population estimates is given in Demographic Estimates and Projections:
Concepts, Sources and Methods, Statistical Concepts Library, ABS website,
http://www.abs.gov.au.
- HISTORY OF THE SURVEY14 National surveys were conducted in February, May, August and
November each year from 1964 to February 1978. The survey has been
conducted on a monthly basis since February 1978.

QUESTIONNAIRE CHANGES **15** The questionnaire used in the survey for the collection of labour force data has been revised from time to time. Details of these changes have been published in *Information Paper: Questionnaires Used in the Labour Force Survey* (6232.0) in March 1978, December 1981, August 1984, June 1986, June 1991 and March 1993. The most recent change was in February 1998, to include references to Centrelink.

INCLUSION OF16 In April 1986, the questionnaire was revised following the extension
of the definition of employed persons to include persons who worked
without pay between 1–14 hours per week in a family business or on a
farm (i.e. contributing family workers). This definition aligned the
Australian labour force concepts with the set of definitions adopted by
the 13th International Conference of Labour Statisticians in October
1982.

17 Previously, contributing family workers who worked 1–14 hours, or who had such a job but were not at work, were defined as either unemployed or not in the labour force, depending on whether they were actively looking for work. In order to assist users to assess the impact of the change, estimates for March 1986 based on the new definition were shown in footnotes to tables 1 and 2 of the February, March and April 1987 issues of this publication.

COMPARABILITY OF SERIES **18** As a result of changes in coding methods, estimates classified by industry, occupation and status in employment data from February 2000 onwards are not strictly comparable with earlier periods. For details on the changes to industry and occupation refer to the article in the November 1999 issue of this publication. For details of the change to status in employment see the article in the May 2000 issue of this publication.

19 As noted in paragraph 12, estimates from January 1995 to January 2000 were revised to conform to revised population estimates following the 1996 Census of Population and Housing, and are thus not strictly comparable with estimates for periods prior to January 1995. An examination of the revised population estimates showed that the effects on Labour Force Survey estimates for the period before January 1995 were inconsequential, and that no meaningful purpose would be served by publishing revised estimates for that period.

COMPARABILITY OF SERIES **20** Comparability with estimates produced from the quarterly Survey of Employment and Earnings is affected by the use of a different survey methodology and definitions. The Labour Force Survey provides estimates of people in jobs whereas the Survey of Employment and Earnings provides an estimate of the number of jobs held by employees. A more detailed description of the differences between these two series is available on request.

21 From December 1989 onwards, the category 'other families' was split into 'one-parent families' and 'other families'. Therefore estimates of other families were not strictly comparable with estimates in previous issues. However, in November 1989, 97% of other families with dependents were one-parent families. In March 1994, a new families classification was introduced which also affected comparability (see paragraphs 47 to 49).

SURVEY SAMPLE REDESIGN **22** Following each Population Census, the ABS reselects the Labour Force Survey sample to take into account the new information which is obtained from the Census. The sample that was used in the Labour Force Survey from September 1992 to August 1997 has been replaced by a new sample selected using information collected in the 1996 Census. The new sample was phased in over the period September 1997 to April 1998. For additional information, see *Information Paper: Labour Force Survey Sample Design* (6269.0).

23 The sampling fractions for each State/Territory differ in order to yield reliable estimates of the main labour force aggregates for each State and Territory. The sampling fractions for the current sample together with the sampling fractions determined from the 1991 Census are:

| | 1991 Census redesign | 1996 Census redesign |
|------------------------------|-------------------------|-------------------------|
| New South Wales | 1 in 277 | 1 in 300 |
| Victoria | 1 in 242 | 1 in 257 |
| Queensland | 1 in 195 | 1 in 222 |
| South Australia | 1 in 139 | 1 in 147 |
| Western Australia | 1 in 146 | 1 in 160 |
| Tasmania | 1 in 75 | 1 in 83 |
| Northern Territory | 1 in 75 | 1 in 85 |
| Australian Capital Territory | 1 in 75 | 1 in 85 |
| | | |

RELIABILITY OF THE ESTIMATES

- **24** Estimates in this publication are subject to two sources of error:
- sampling error: since the estimates are based on information obtained from occupants of a sample of dwellings they, and the movements derived from them, may differ from the figures that would have been produced if all dwellings had been included in the survey. More information on this topic is given in the Technical Notes; and

RELIABILITY OF ESTIMATES
 non-sampling error: inaccuracies may occur because of imperfections in reporting by respondents and interviewers and errors made in coding and processing data. These inaccuracies may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

DIFFERENCES BETWEEN CENSUS AND LABOUR FORCE SURVEY ESTIMATES

25 The results of the 1996 Census of Population and Housing show that labour force estimates derived from the Census differ from those derived from the Labour Force Survey.

26 The broad concepts underlying the measures of the labour force and its components, employment and unemployment, are similar in the Census and the survey.

27 There are considerable differences in both the collection methodology adopted (including the detailed questions asked) and estimation procedures. Factors contributing to differences in estimates include under-enumeration in the Population Census for which census labour force estimates have not been adjusted, the use in the Labour Force Survey of population benchmarks derived from incomplete information about population change (see paragraph 11), the inclusion of permanent defence forces in census estimates, the personal interview approach adopted in the survey as opposed to self-enumeration of census schedules, differing questions used to determine labour force characteristics and differing methods of adjustment for non-response to the survey or Census.

28 The Labour Force Survey provides detailed and up-to-date estimates of employment and unemployment for Australia, States and regions, whereas the Census of Population and Housing provides counts for small areas but in less detail than is available from the survey.

29 These considerations should be borne in mind when comparisons are made between Population Census and Labour Force Survey estimates.

SEASONAL ADJUSTMENT
 30 Seasonally adjusted series are published in tables 2, 8, 24 and 39. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be recognised more clearly. Seasonal adjustment does not remove the irregular or non-seasonal influences which may be present in any particular month. This means that month-to-month movements of the seasonally adjusted estimates may not be reliable indicators of trend behaviour. For example, irregular factors unrelated to the trend account for more than half the seasonally adjusted movement in series at the Australia level, with the following frequency:

| SEASONAL ADJUSTMENT | Series | Monthly movements |
|---------------------|--------------------|-------------------|
| continued | Employment | 6 in 10 |
| | Unemployment | 8 in 10 |
| | Unemployment rate | 7 in 10 |
| | Participation rate | 9 in 10 |

31 The seasonal factors for all seasonally adjusted series are reviewed annually to take account of each additional year's original data. The latest review, in February 2000, revised the Australian and State seasonally adjusted and trend monthly series back to February 1978. For information about the method of adjustment, please refer to the feature article in the February 2000 issue of this publication. Revised seasonally adjusted and trend estimates for all months for Australia and the States are available on request. Inquiries concerning this data should be directed to Mark Webb on Canberra 02 6252 6525.

TREND ESTIMATION **32** Smoothing seasonally adjusted series produces a measure of trend by reducing the impact of the irregular component of the series. The monthly trend estimates are derived by applying a 13-term Henderson-weighted moving average to all months except the last six. The last six monthly trend estimates are obtained by applying surrogates of the Henderson average to the seasonally adjusted series. Quarterly trend estimates (e.g. employment by industry) are derived by applying a 7-term Henderson moving average to the seasonally adjusted series. The 7-term Henderson average also uses surrogate forms of the average as the end of a time series is approached. Unlike the surrogate weights of the 13-term Henderson used on monthly data, the weights employed here are tailored to suit the particular characteristics of individual series. These trend series are used to analyse the underlying behaviour of the series over time. Trend series graphs are shown on pages 6 to 9 with the trend series published in tables 3, 9, 24 and 40. Long term data are available on the ABS on-line data dissemination service, PC Ausstats.

33 While this smoothing technique enables estimates to be produced which include the latest month, it does result in revisions to the most recent months as additional observations become available. Generally, subsequent revisions become smaller, and after three months or two quarters have a negligible impact on the series. There will also be revisions as a result of the annual review of seasonal factors mentioned above in paragraph 31.

| TREND ESTIMATION continued | 34 Trend estimates for the Australian Capital Territory and the Northern Territory are published in table 9. Original estimates for the two Territories have shown, historically, a high degree of variability, which can lead to considerable revisions to the seasonally adjusted estimates after each annual seasonal factor re-analysis. Seasonally adjusted estimates are not currently published for the two Territories. The most recent six months trend estimates are subject to revision. For the three most recent months, the revision may be relatively large. Inferences about trends drawn from smoothed seasonally adjusted (trend) estimates for months earlier than the latest three months are unlikely to be affected by month-to-month revisions. They may, however, be revised as a result of the annual re-analysis of seasonal factors. |
|-------------------------------|--|
| | 35 Users may wish to refer to the ABS publication <i>A Guide to</i> <i>Interpreting Time Series — Monitoring 'Trends' an Overview (1348.0)</i> for further information about trend estimates. Details of the trend weighting patterns are available on request from the Assistant Director, Time Series Analysis on Canberra 02 6252 6345. |
| MONTH-TO-MONTH MOVEMENTS | 36 Care should be taken in the interpretation of month-to-month movements in these estimates. Survey estimates are subject to sampling and non-sampling variability as explained in paragraph 24. |
| GROSS FLOWS | 37 In order to minimise respondent load and at the same time maintain continuity within the population survey sample, one-eighth of the dwellings are replaced after each survey. Adoption of this rotation procedure, whereby about seven-eighths of the sample remains unchanged from one month to the next, enables more reliable measurements of changes in the labour force characteristics of the population to be made than would be possible if a new sample were introduced each month. |
| | 38 Because a high proportion of private dwellings selected in one survey remains in the sample for the following survey, it is possible to match the characteristics of most of the persons in those dwellings from one month to the next, to record any changes that occur, and hence to produce estimates of flows between the different categories of the population and labour force. |
| | 39 The procedures used to select persons in non-private dwellings preclude the possibility of matching any of them who may be included in successive surveys. For this and other reasons, including the mobility of the population and non-response in either or both surveys, about 10% of persons in those dwellings which are included in the sample in successive months cannot be matched. The introduction of the new sample means less persons will be common between August, September and October 1997. Normally those who can be matched represent about 80% of all persons in the survey. |

GROSS FLOWS continued **40** Changes in the characteristics of this latter group are shown in the gross flows table (table 28). About two-thirds of the remaining (unmatched) 20% of persons in the survey are likely to have characteristics similar to those in the matched group, but the characteristics of the other third are likely to be somewhat different.

> 41 Gross flow estimates relate only to those persons in private dwellings for whom information was obtained in successive surveys. The expansion factors used in calculating the estimates were those applying to the second of each pair of months. Note that the estimates have not been adjusted to account for the unmatched sample component.

42 Although it is not possible to provide gross flow estimates for all persons in the survey it is considered that the estimates derived from matched records will be a useful guide to the proportions of the movements between categories which underlie the changes in monthly levels. When comparing flows for different periods it is important to take into account the population represented by the matched sample, as shown in the last line of the table.

43 While every effort is made to reduce non-sampling errors to a minimum, any such errors affecting labour force status will tend to accumulate in the gross flow statistics rather than to cancel out. The estimates are also subject to sampling variability, as explained in the Technical Notes. For these reasons the estimates of flows should be used with caution. The standard errors may be obtained from table A of the Technical Notes.

44 As a part of survey procedures, family relationships are determined AND OTHER each month, enabling both the estimation of persons cross-classified by CHARACTERISTICS OF their relationship in the household and the estimation of families. This FAMILIES publication contains tables showing the labour force status and family status of individuals and families classified by family type, number of family members, the labour force status of persons within families, the number of children under 15 present and the number of dependants present.

> 45 Because of the coverage rules, persons who usually live with other members of their family may, at the time of the survey, be enumerated as not living with all the usual members of their family. This situation is more likely for persons who are enumerated as visitors to other private dwellings or as persons staying in non-private dwellings (hotels, hospitals, etc.). The determination of family structure and family characteristics in such cases is difficult.

LABOUR FORCE STATUS

LABOUR FORCE STATUS AND OTHER CHARACTERISTICS OF FAMILIES continued Thus for survey questions used to determine family relationships, scope was further restricted to usual residents of private dwellings and the following persons were excluded:

- all persons enumerated in non-private dwellings (including hotels, motels, hospitals and other institutions); and
- persons enumerated as visitors to (rather than usual residents of) private dwellings.

46 In addition, in those households where it was not possible to obtain information relating to all the usual residents, no family information was recorded. Thus persons living in households which include a member of the permanent defence forces, who is outside the scope of the population survey, are excluded from survey questions used to determine family relationships because family information could not be obtained from each usual resident. Similarly households which, at the time of the survey, have one or more of their usual residents away for more than six weeks, are excluded from the family survey. This also applies to households from which an incomplete or inadequate questionnaire was obtained for any usual resident in on scope and coverage. A summary of those persons for whom family information is obtained as well as those usual residents of private dwellings for whom complete family information cannot be obtained, and those persons specifically excluded from the family determination procedures is contained in the family tables. Generally, relationship in household is determined for more than 90% of all civilians aged 15 and over.

CHANGES IN FAMILIES **47** *Relationship in household* and *Family type* classifications were CLASSIFICATIONS introduced in the March 1994 issue of this publication to align with ABS standards. Most categories in the two classifications remain comparable with categories in the previous classifications. The cases in which there are breaks in comparability are discussed in the following paragraphs.

48 *Relationship in household.* This classification was previously referred to as *Family status*.

- Lone parents (previously referred to as *Sole parents*) now includes parents with non-dependent children (provided those children are without a spouse or children of their own). These *Lone parents without dependants* are shown separately in table 30 and there were 205,800 such persons in March 1994.
- Dependent students (previously Full-time students aged 15-24) now comprise sons or daughters (of a couple or a lone parent) aged 15-19 attending school or aged 15-24 attending a tertiary educational institution full time. Other related full-time students, who were also previously classified as *Full-time students aged 15-24* are now included in *Other family persons*. There were 24,200 such persons in March 1994.

CHANGES IN FAMILIES CLASSIFICATIONS continued • Other family persons now comprises the previous groups Other family head, excluding those now counted as Lone parents (79,200 persons in March 1994), the other related full-time students previously classified as *Full-time students aged 15–24* (see above; 24,200 in March 1994) and Other relative of married couple or family head (218,100 in March 1994).

49 *Family type*. This classification was previously referred to as *Type of family*. There are three types of families in the new classification, as follows:

- *Couple families* is the term used to describe families previously referred to as *Married-couple families*. Apart from the name change, the new category is otherwise exactly comparable with the old category.
- One-parent families now includes those families in which there is a lone parent with only non-dependent children present. Such families were previously included in Other families. There were 208,400 of these families in March 1994.
- *Other families* now excludes those families in which there is a lone parent with only non-dependent children present (see above).

50 Estimates of the number of families in this publication differ from those in publications prior to the April 1986 issue. This is due to the adoption of a weighting procedure where the weight for a family is determined using an average of the weights for all family members responding to the Labour Force Survey. Previously, the weight used to derive estimates of the number of families was determined by nomination of a proxy 'head of household' as representative of the family. Additional tables were included in the April 1986 issue of this publication to show the impact of this new procedure.

BIRTHPLACE**51** From April 1991, labour force birthplace data are aggregated
according to major groups of the Australian Standard Classification of
Countries for Social Statistics (ASCCSS) (1269.0). The ASCCSS was
developed by the ABS for use whenever demographic, labour and social
statistics are classified by countries.

52 The ASCCSS major groups are based on the concept of geographic proximity. They differ from the country groups presented in this publication prior to April 1991. For example, African countries are now covered by 'The Middle East and North Africa' and 'Africa (excluding North Africa)', while Asia has been split into 'Southeast Asia', 'Northeast Asia' and 'Southern Asia'. Data for selected individual countries will continue to be available in this publication.

53 From August 1994, Labour Force Survey industry data are classified according to the Australian and New Zealand Standard Industrial Classification (ANZSIC), a detailed description of which appears in *ANZSIC 1993* (1292.0). Like the previous Australian Standard Industrial Classification (ASIC), ANZSIC classifies businesses according to their economic activities, in a structure consisting of 4 levels (Division, Subdivision, Group and Class). Labour Force Survey data are coded at the Group level, as was the practice under ASIC.

54 To enable the conversion of historical data from ASIC to ANZSIC for the period November 1984 to May 1994, a concordance was published in the August 1994 issue of this publication and in the *Information Paper* — *Labour Force Survey: Introduction of ANZSIC for Industry Data (Replacement Publication)* (6259.0). It has been found that the concordance, which was based on preliminary investigations, did not provide the most appropriate conversion for certain Group level industries. An improved concordance has now been applied to historical Labour Force Survey estimates. This concordance was published in an appendix to the May 1996 issue of this publication, and in a further issue of the above Information Paper. For further information about the new concordance or the availability of data, contact Mark Webb on Canberra 02 6252 6525.

OCCUPATION**55** From August 1996, Labour Force Survey occupation data are
classified according to the Australian Standard Classification of
Occupations (ASCO) Second Edition, a detailed description of which
appears in ASCO — Australian Standard Classification of Occupations,
Second Edition (1220.0). The new version of the classification replaces
ASCO First Edition, which was adopted in the survey in August 1986.
Like ASCO First Edition, ASCO Second Edition is a skill-based
classification of occupation. However, the structure of ASCO Second
Edition comprises five hierarchical levels (Major Group, Sub-Major Group,
Minor Group, Unit Group and Occupation) compared with four levels in
ASCO First Edition (Major Group, Minor Group, Unit Group and
Occupation). Under ASCO Second Edition, Labour Force Survey data are
coded to the Unit Group level, as was the practice under ASCO First
Edition.

ADDITIONAL DATA **56** Estimates for employed persons classified by industry, occupation and status in employment are available each February, May, August and November. For these months, additional tables containing the following data are included in this publication:

- Employed persons by industry:
 - Original, seasonally adjusted and trend;
 - Full-time and part-time workers;
 - Status in employment;
 - Age and birthplace;
 - Hours worked;
 - Divisions and subdivisions;
 - Industry by occupation;
- Employed persons by occupation:
 - Full-time and part-time workers;
 - Status in employment;
 - Age and birthplace;
 - Hours worked;
 - Major, sub-major, and selected minor groups;
- Unemployment rate by industry of last full-time job;
- Unemployment rate by occupation of last full-time job.

Seasonally adjusted estimates of employed persons by industry have been published in this bulletin since February 1993. Trend estimates have been published since August 1994.

TECHNICAL NOTES1 A new sample for the Labour Force Survey has been phased in over the
period September 1997 to April 1998. For information about the sample
design see *Information Paper: Labour Force Survey Sample Design* (6269.0).

ESTIMATION PROCEDURE 2 The labour force estimates are derived from the population survey by use of a complex ratio estimation procedure, which ensures that the survey estimates conform to an independently estimated distribution of the population by age and sex, rather than to the age and sex distribution within the sample itself.

RELIABILITY OF THE ESTIMATES 3 Two types of error are possible in an estimate based on a sample survey: sampling error and non-sampling error. The sampling error is a measure of the variability that occurs by chance because a sample, rather than the entire population, is surveyed. Since the estimates in this publication are based on information obtained from occupants of a sample of dwellings they, and the movements derived from them, are subject to sampling variability; that is, they may differ from the estimates that would have been produced if all dwellings had been included in the surveys. One measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included. There are about two chances in three that a sample estimate will differ by less than one standard error from the estimate that would have been obtained if all dwellings had been included, and about nineteen chances in twenty that the difference will be less than two standard errors. Another measure of sampling variability is the *relative standard error* which is obtained by expressing the standard error as a percentage of the estimate to which it refers. The relative standard error is a useful measure in that it provides an immediate indication of the percentage errors likely to have occurred due to sampling, and thus avoids the need to refer also to the size of the estimate.

4 The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by respondents, errors made in collection such as in recording and coding data, and errors made in processing the data. Inaccuracies of this kind are referred to as the *non-sampling error* and they may occur in any enumeration, whether it be a full count or a sample. It is not possible to quantify non-sampling error, but every effort is made to reduce it to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures. For the examples on page 67 it is assumed to be zero. In practice, the potential for non-sampling error adds to the uncertainty of the estimates caused by sampling variability.

RELIABILITY OF THE ESTIMATES continued

5 Space does not allow for the separate indication of the standard errors of all estimates in this publication. Standard errors of estimates for the latest month and of estimates of movements since the previous month are shown in table 1. Standard errors of other estimates and other monthly movements should be determined by using tables A and B.

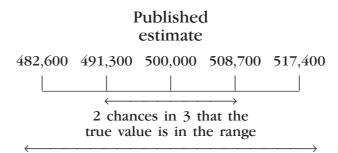

6 The size of the standard error increases with the level of the estimate, so that the larger the estimate the larger is the standard error. However, it should be noted that the larger the sample estimate the smaller will be the standard error in percentage terms. Thus, larger sample estimates will be relatively more reliable than smaller estimates.

7 As the standard errors in table A show, *the smaller the estimate the bigber is the relative standard error*. Very small estimates are subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In the tables in this publication, only estimates with relative standard errors of 25% or less, and percentages based on such estimates, are considered sufficiently reliable for most purposes. However, estimates and percentages with larger relative standard errors have been included and are preceded by an asterisk (e.g. *3.4) to indicate they are subject to high standard errors and should be used with caution.

8 The movement in the level of an estimate is also subject to sampling variability. The standard error of the movement depends on the levels of the estimates from which the movement is obtained rather than the size of the movement. An indication of the magnitude of standard errors of monthly movements is given in table B. The estimates of standard error of monthly movements apply only to estimates of movements between two consecutive months. Movements between corresponding months of consecutive quarters (quarterly movements), corresponding months of consecutive years (annual movements) and other non-consecutive months, will generally be subject to somewhat greater sampling variability than is indicated in table B. Standard errors of quarterly movements can be obtained by multiplying the figures in table A by 1.04. Standard errors of all six monthly movements can be obtained by multiplying the figures in table A by 1.28. When using table A or table B to calculate standard errors of movements, refer to the larger of the two estimates from which the movement is derived.

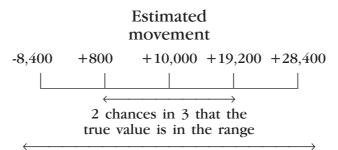

RELIABILITY OF THE ESTIMATES **9** continued

- Examples of the calculation and use of standard errors are given below:
- Consider an estimate for Australia of 500,000 employed persons aged 15–19. By referring to table A, in the row for an estimate of 500,000 and the column for Australia, a standard error of 8,700 is obtained. There are about two chances in three that the true value (the number that would have been obtained if the whole population had been included in the survey) is within the range 491,300 to 508,700. There are about nineteen chances in twenty that the true value is in the range 482,600 to 517,400.

19 chances in 20 that the true value is in this range

Consider estimates for females employed part time in Australia of 1,390,000 in one month and 1,400,000 in the next month. This represents an upward movement of 10,000. By referring to table B for the larger estimate of 1,400,000, a movement standard error of 9,200 is obtained (after applying linear interpolation and rounding). Therefore, there are about two chances in three that the true movement is in the range +800 to +19,200 and about nineteen chances in twenty that the true movement is in the range -8,400 to +28,400.

¹⁹ chances in 20 that the true value is in this range

RELIABILITY OF THE ESTIMATES continued

10 The relative standard errors of estimates of *aggregate hours worked*, *average hours worked*, *average duration of unemployment*, and *median duration of unemployment* are obtained by first finding the relative standard error of the estimate of the total number of persons contributing to the estimate (see table A) and then multiplying the figure so obtained by the following relevant factors:

- aggregate hours worked: 1.4;
- average hours worked: 0.9;
- average duration of unemployment: 1.5; and
- median duration of unemployment: 1.7.

The levels at which these and other labour force estimates have a relative standard error of 25% are shown in table C.

11 The following is an example of the calculation of standard errors where the use of a factor is required:

Consider a median duration of unemployment for Australia of 30 weeks, with an estimate of 1,000,000 persons unemployed. Table A gives the standard error as 11,350 which is 1.1% as a *relative standard error*. The factor of 1.7 (see paragraph 10) is applied to the relative standard error of 1.1% to obtain 1.9%. Therefore the *standard error* for the median duration of unemployment is 1.9% of 30 weeks, i.e. about half of one week. So there are two chances in three that the median duration of unemployment is between 29.5 and 30.5 weeks, and about nineteen chances in twenty that it is between 29 and 31 weeks.

12 Proportions and percentages (for example, unemployment rates) formed from the ratio of two estimates are also subject to sampling error. The size of the error depends on the accuracy of both the numerator and denominator. The formula for the relative standard error (RSE) of a proportion or percentage is given below:

RSE
$$(x / y) = \sqrt{[RSE (x)]^2 - [RSE (y)]^2}$$

13 Standard errors contained in tables A and B are designed to provide an average standard error applicable for all monthly Labour Force Survey estimates. Analysis of the standard errors applicable to particular survey estimates has shown that the standard errors of estimates of employment are generally 5% lower than those shown in tables A and B, while standard errors for estimates of unemployment and persons not in the labour force are both approximately 4% higher than those shown in the tables.

GLOSSARY

| Actively looking for work | Includes writing, telephoning or applying in person to an employer for work; answering an advertisement for a job; checking factory noticeboards or the touchscreens at Centrelink offices; being registered with Centrelink as a jobseeker; checking or registering with any other employment agency; advertising or tendering for work; and contacting friends or relatives. |
|--|--|
| Aggregate hours worked | The total number of hours a group of employed persons has actually worked during the reference week, not necessarily hours paid for. |
| Attending school | Persons aged 15–19 who, during the reference week, were enrolled full time at secondary or high schools. |
| Attending tertiary educational institution full time | Persons aged 15–24 who, during the reference week, were enrolled full time at a TAFE college, university, or other tertiary educational institution. |
| Average duration of unemployment | For a group of unemployed persons, the aggregate duration of unemployment divided by the number of persons in the group. |
| Average family size | For any group of families, the total number of family members divided by the number of families in the group. |
| Average hours worked | Aggregate hours worked by a group divided by the number of persons in that group. |
| Birthplace | From April 1991, classified according to the Australian Standard Classification of Countries for Social Statistics (ASCCSS) (1269.0). |
| Contributing family worker | A person who works without pay, in an economic enterprise operated by a relative. (This category was formerly entitled unpaid family helper). |
| Couple families | Families in which there are two married persons and these persons are husband and wife. |
| Dependants | All family members under 15 years of age; all family members aged 15–19 attending school or aged 15–24 attending a tertiary educational institution full time (except those classified as husbands, wives or lone parents). |
| Dependent student | In couple or one-parent families, sons or daughters aged 15–19 attending school or aged 15–24 attending a tertiary educational institution full time (except those classified as husbands, wives or lone parents). |
| Duration of unemployment | The period from the time a person began looking for work or was stood down, to the end of the reference week. Thus the survey measures current (and continuing) periods of unemployment rather than completed spells. For persons who may have begun looking for work while still employed, the duration of unemployment is defined as the period from the time the person last worked full time for two weeks or more to the end of the reference week. |

- **Employed** Persons aged 15 and over who, during the reference week:
 - worked for one hour or more for pay, profit, commission or payment in kind in a job or business, or on a farm (comprising employees, employers and own account workers); or
 - worked for one hour or more without pay in a family business or on a farm (i.e. contributing family workers); or
 - were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the reference week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the reference week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or
 - were employers, own account workers or contributing family workers who had a job, business or farm, but were not at work.
- **Employee** An employee is a person who works for a public or private employer and receives remuneration in wages, salary, a retainer fee by their employer while working on a commission basis, tips, piece-rates or payment in kind, or a person who operates his or her own incorporated enterprise with or without hiring employees.
- **Employer** An employer is a person who operates his or her own unincorporated economic enterprise or engages independently in a profession or trade, and hires one or more employees.
- Employment/population
ratioFor any group, the number of employed persons expressed as a
percentage of the civilian population aged 15 and over in the same
group.
 - **Family** Two or more related persons (*relationship* includes relationships by blood, marriage or adoption) usually resident in the same household at the time of the survey. A family comprises a married couple or a family head as defined, together with any persons having any of the following relationships to them:
 - sons or daughters of any age, if not married and with no children of their own present;
 - other relatives if not accompanied by a spouse, sons or daughters, or parents of their own; or
 - any children under 15 years of age who do not have a parent present.

- **Family head** Any person without a spouse present:
 - with a son or daughter aged under 15 present; or
 - without a son or daughter aged under 15 present, but with a son or daughter aged 15 or over present (provided that the son or daughter has no spouse, son or daughter of his/her own present); or

Where a family has no person falling into either of these categories, the family head is generally defined to be the eldest person in the family.

No family head is determined for a couple family.

- **Former workers** Unemployed persons who have previously worked full time for two weeks or more but not in the past two years.
- **Full-time workers** Employed persons who usually worked 35 hours or more a week (in all jobs) and others who, although usually working less than 35 hours a week, worked 35 hours or more during the reference week.
 - **Household** A group of one or more persons in a private dwelling who consider themselves to be separate from other persons (if any) in the dwelling, and who make regular provision to take meals separately from other persons, i.e. at different times or in different rooms. Lodgers who receive accommodation but not meals are treated as separate households. Boarders who receive both accommodation and meals are not treated as separate households. A household may consist of any number of families and non-family members.
 - Industry From August 1994, classified according to the Australian and New Zealand Standard Industrial Classification (ANZSIC) 1993 (1292.0).
 - Job leavers Unemployed persons who have worked full time for two weeks or more in the past two years and *left that job voluntarily*, that is, because of unsatisfactory work arrangements/pay/hours; the job was seasonal, temporary or a holiday job and they left that job to return to studies; their last job was running their own business and they closed down or sold that business for reasons other than financial difficulties; or any other reasons.
 - **Job losers** Unemployed persons who have worked full time for two weeks or more in the past two years and *left that job involuntarily*, that is, were laid off or retrenched from that job; left that job because of their own ill-health or injury; the job was seasonal, temporary or a holiday job and they did not leave that job to return to studies; or their last job was running their own business and the business closed down because of financial difficulties.
 - Labour force For any group, persons who were employed or unemployed, as defined.

- Labour force statusA classification of the civilian population aged 15 and over into
employed, unemployed or not in the labour force, as defined. The
definitions conform closely to the international standard definitions
adopted by the International Conferences of Labour Statisticians.
 - **Lone parent** The head of a one-parent family.
 - **Lone person** A person who is the sole member of a household.
- Long-term unemployed Persons unemployed for a period of 52 weeks or more.
- Main English speaking
countriesThe United Kingdom, Ireland, South Africa, Canada, the United States of
America and New Zealand.
 - Marital status Persons are classified as married (husband and wife) if they are reported as being married (including de facto) and their spouse was a usual resident of the household at the time of the survey. The not-married category comprises persons who have never married, or are separated, widowed or divorced, as well as those who, although reported as being married, did not have a spouse who usually lived in the household.
 - Median duration of
unemploymentThe duration which divides unemployed persons into two equal groups,
one comprising persons whose duration of unemployment is above the
median and the other, persons whose duration is below it.
 - **Non-dependent child** In couple or one parent families, sons or daughters aged 15 and over, other than those classified as dependent students, husbands, wives or sole parents.
 - **Non-family member** A person who is not related to any other member of the household in which they are living.
- **Not in the labour force** Persons who were not in the categories employed or unemployed, as defined. They include persons who were keeping house (unpaid), retired, voluntarily inactive, permanently unable to work, persons in institutions (hospitals, gaols, sanatoriums, etc.), trainee teachers, members of contemplative religious orders, and persons whose only activity during the reference week was jury service or unpaid voluntary work for a charitable organisation.
 - OccupationFrom August 1996, classified according to the Australian Standard
Classification of Occupations, Second Edition 1996 (Cat. no. 1220.0).
See Information Paper: ASCO Australian Standard Classification of
Occupations (1221.0).
 - **One-parent families** Families in which there is a family head together with at least one son or daughter of his/her own.
 - **Other families** Families which are not couple families or one-parent families, as defined. They include families in which there is no parent, for example a family head living with a brother or sister.

- **Own-account worker** A person who operates his or her own unincorporated economic enterprise or engages independently in a profession or trade, and hires no employees (this category was formerly entitled self employed).
 - **Participation rate** For any group, the labour force expressed as a percentage of the civilian population aged 15 and over in the same group. Participation rates for persons classified by birthplace are calculated using population estimates which exclude those in institutions. Participation rates for persons classified by school or tertiary educational institution attendance are calculated using population estimates which include those in institutions.
 - **Part-time workers** Employed persons who usually worked less than 35 hours a week and who did so during the reference week.
- Seasonally adjusted A time series of estimates with the estimated effects of normal seasonal variation removed. See paragraphs 30 and 31 of the Explanatory Notes for more detail.

State capital citiesThe areas determining the six State capital cities are the Statistical
Divisions for those capital cities defined in the Statistical Geography:
Volume 1 - Australian Standard Geographical Classification (ASGC)
(1216.0).

Status in employment Employed persons classified by whether they were employers, own account workers, employees, or contributing family workers.

Trend seriesA smoothed seasonally adjusted series of estimates. See paragraphs 32 to
35 of the Explanatory Notes for more detail.

- **Unemployed** Persons aged 15 and over who were not employed during the reference week, and:
 - had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week and:
 - were available for work in the reference week, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the reference week); or
 - were waiting to start a new job within four weeks from the end of the reference week and would have started in the reference week if the job had been available then; or
 - were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the reference week (including the whole of the reference week) for reasons other than bad weather or plant breakdown.

Unemployed looking for
first full-time jobUnemployed persons looking for full-time work who had never worked
full time for two weeks or more.

Unemployed looking for Unemployed persons who had never worked full time for two weeks or first job more.

| Unemployed looking for | Unemployed persons who actively looked for full-time work or were to |
|----------------------------|--|
| full-time work | resume a full-time job from which they had been stood down. |
| Unemployed looking for | Unemployed persons who had actively looked for part-time work only, or |
| part-time work | were to resume a part-time job from which they had been stood down. |
| Unemployed persons | Unemployed persons who had worked full time for two weeks or more |
| classified by industry and | in the last two years are classified according to the industry and |
| occupation | occupation of their most recent full-time job. |
| Unemployment rate | For any group, the number of unemployed persons expressed as a percentage of the labour force in the same group. |

SUPPLEMENTARY SURVEYS

FORTHCOMING

The supplementary and special surveys collect data on particular aspects of the labour force. The following is an historical list of supplementary and special labour force surveys. The data is available in publication form, by subscription or on request. It may be possible to order unpublished data on the following supplementary and special surveys by contacting the ABS.
