FORTHCOMING CHANGES The Labour Force Survey (LFS) questionnaire is being redesigned to

> better reflect current labour market phenomena and contemporary user needs. The new questionnaire is scheduled to be implemented in April 2001. More information is available in Information Paper: Labour Force Survey Questionnaire Redesign (Cat no. 6294.0), which was

released on 14 March 2000.

#### LABOUR MARKET IN BRIEF

TREND ESTIMATES

The trend estimate of employed persons decreased slightly to 9,098,600 in November 2000. Both full-time and part-time employment decreased, to 6,715,500 and 2,383,100 respectively. The trend estimate of unemployment increased to 620,000 in November 2000, the first increase since June 1998. The trend unemployment rate in November 2000 remained steady at 6.4%. The male unemployment rate increased to 6.7% and the female unemployment rate remained steady at 6.0%. The trend participation rate in November 2000 decreased to 63.6%. The female participation rate decreased to 54.8% and the male participation rate remained at 72.6%.

**EMPLOYMENT** 

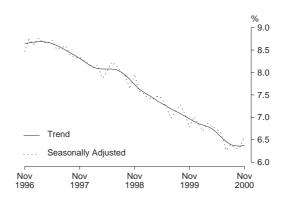

The seasonally adjusted estimate of employment decreased by 59,200 to 9,047,100 in November 2000. Full-time employment fell by 6,100 to 6,698,800, with male full-time employment falling by 5,800 to 4,431,200 and female full-time employment falling marginally to 2,267,600. Part-time employment fell by 53,000 to 2,348,300, with female part-time employment falling by 43,300 to 1,690,200 and male part-time employment falling by 9,800 to 658,000.

**UNEMPLOYMENT** 

The seasonally adjusted estimate of unemployment increased by 21,700 to 637,100 in November 2000. The number of unemployed persons seeking full-time work rose by 15,100 to 473,800, with the number of males and females seeking full-time work rising by 2,200 and 12,900 respectively. The number of unemployed persons seeking part-time work rose by 6,700 to 163,400. The number of females seeking part-time work rose by 7,900 and the number of males seeking part-time work fell by 1,200.

UNEMPLOYMENT RATE

The seasonally adjusted unemployment rate rose by 0.2 percentage points to 6.6% in November 2000. The male unemployment rate remained steady at 6.7% and the female unemployment rate rose by 0.5 percentage points to 6.4%.

PARTICIPATION RATE

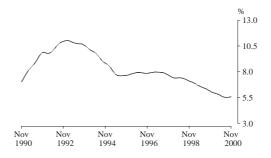

The seasonally adjusted labour force participation rate decreased by 0.3 percentage points to 63.3% in November 2000. The male participation rate decreased by 0.3 percentage points to 72.4% and the female participation rate decreased by 0.4 percentage points to 54.5%.

#### SELECTED LABOUR FORCE SERIES

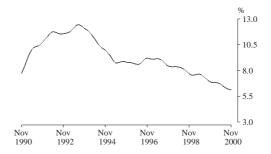

UNEMPLOYMENT RATE BY STATE: TREND SERIES

New South Wales

From a peak of 11.0% in January 1993, the trend unemployment rate for New South Wales fell steadily to 7.6% in July 1995. The trend estimate then increased gradually, reaching 8.0% in April 1997. Since then, the trend unemployment rate has declined, to stand at 5.6% in November 2000.

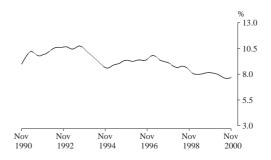

Victoria The trend estimate of the unemployment rate for Victoria decreased sharply from a peak of 12.4% in August 1993 to 8.7% in June 1995. The trend then remained steady for the next year before rising to 9.2% in November 1996. The trend estimate has since generally fallen to stand at 6.1% in November 2000.

Queensland

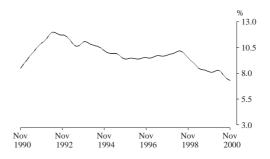

The trend estimate of the unemployment rate for Queensland decreased from a peak of 10.7% in August 1993 to 8.6% in December 1994. The trend then rose to 9.8% in February 1997. Apart from two small increases in 1998 and 1999, the trend estimate has decreased since February 1997, and stood at 7.7% in November 2000.

#### UNEMPLOYMENT RATE BY STATE: TREND SERIES

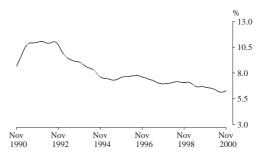

South Australia

The trend unemployment rate for South Australia peaked at 12.0% in June 1992. The trend then fell steadily to 9.4% in November 1995 before rising slowly to 10.2% in June 1998. The trend has since decreased and stood at 7.3% in November 2000.

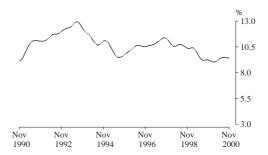

Western Australia

After reaching 11.1% in January 1992, the trend estimate of the unemployment rate for Western Australia remained relatively steady until late 1992. The trend estimate then fell to 7.3% in July 1995. After rising to 7.7% in August 1996 the trend estimate has since generally fallen to 6.3% in November 2000.

Tasmania

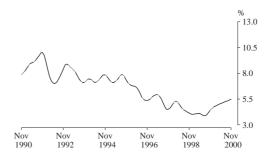

The trend estimate of the unemployment rate for Tasmania fell from a peak of 12.9% in August 1993 to 9.5% in August 1995. The trend estimate then rose to 11.4% in October 1997, before declining to 9.0% in March 2000. Recently the trend has risen and stood at 9.4% in November 2000.

### UNEMPLOYMENT RATE BY TERRITORY AND AUSTRALIA: TREND SERIES

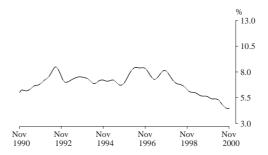

Northern Territory

From a high of 10.0% in November 1991, the trend unemployment rate for the Northern Territory generally declined to 3.9% in August 1999. The trend has since increased to stand at 5.5% in November 2000.

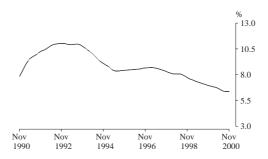

Australian Capital Territory

The trend unemployment rate for the Australian Capital Territory declined from a high of 8.5% in August 1992 to 7.0% in February 1993. The trend remained fairly stable for the next three years, before rising to 8.4% in June 1996. Since then the trend has generally fallen to 4.4% in November 2000.

Australia

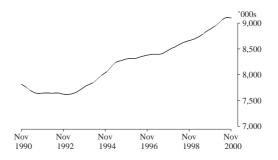

After reaching a high of 11.0% in mid 1992, the trend unemployment rate remained steady for twelve months, before falling rapidly to 8.3% in July 1995. The trend then rose slowly, reaching 8.7% in March 1997. Apart from a small increase in mid 1998, the trend estimate has since decreased, and stood at 6.4% in November 2000.

#### PRINCIPAL LABOUR FORCE SERIES: TREND ESTIMATES

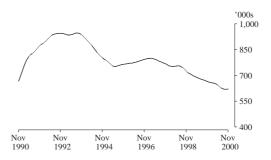

Employment

The trend estimate of employed persons rose strongly from a low of 7,615,300 in January 1993 until mid 1995. The trend then continued to rise at a slower rate until May 1997, before showing stronger growth. The trend has fallen over the last two months to stand at 9,098,600 in November 2000.

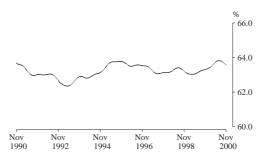

Unemployment

The trend estimate of unemployed persons peaked at 946,800 in September 1993, before falling rapidly to 751,900 in June 1995. The trend then rose slowly for almost two years to 799,400 in March 1997. The trend estimate has generally been falling since then, and was 620,000 in November 2000.

Participation Rate

The trend estimate of the participation rate rose from 62.3% in April 1993 to 63.8% in mid 1995. Apart from a small increase in mid 1998, the trend then generally fell to 63.0% in April 1999. The trend then increased to 63.8% in July 2000. In recent months the trend has fallen to stand at 63.6% in November 2000.

#### **EXPLANATORY NOTES**

#### INTRODUCTION

- This publication contains estimates of the civilian labour force derived from the Labour Force Survey component of the Monthly Population Survey. Estimates of the labour force characteristics of family members and of family composition are also included.
- Estimates of the civilian labour force are available for over 77 regions across Australia and are shown in various publications produced by State offices of the ABS. These data are also available as a special data service. For details, contact any ABS office.
- Preliminary survey results are published in advance of this more detailed publication in Labour Force, Australia, Preliminary (6202.0).
- Although emphasis in the population survey is placed on the regular collection of specific data on demographic and labour force characteristics of the population, supplementary and special surveys of particular aspects of the labour force or of other subjects are carried out from time to time. Statistics from these surveys are available on request. A list of survey publications on labour force and related topics appears at the end of this publication.

#### POPULATION SURVEY

The population survey is based on a multi-stage area sample of private dwellings (currently about 30,000 houses, flats, etc.) and a list sample of non-private dwellings (hotels, motels, etc.), and covers about 0.5% of the population of Australia. The information is obtained from the occupants of selected dwellings by specially trained interviewers. The interviews are generally conducted during the two weeks beginning on the Monday between the 6th and 12th of each month. The information obtained relates to the week before the interview (i.e. the reference week).

## INTRODUCTION OF TELEPHONE INTERVIEWING

- The ABS introduced the use of telephone interviewing into the Labour Force Survey over the period August 1996 to February 1997. Households selected for the Labour Force Survey are interviewed each month for eight months, with one-eighth of the sample being replaced each month. The first interview is conducted face-to-face. Subsequent interviews are then conducted by telephone (if acceptable to the respondent). The method was phased in by switching each incoming sample group over to telephone interviewing in its second month in the survey.
- During the period of implementation, the new method produced different estimates than would have been obtained under the old methodology. The effect peaked in November 1996, when it is estimated that the published estimate of total employment was about 36,000 to 48,000 lower than would have been measured under the old methodology. The effect dissipated over the final months of implementation and was no longer discernible from February 1997. Therefore, the estimates for February 1997 and onwards are directly comparable to estimates for periods prior to August 1996.

**SCOPE** 

- The Labour Force Survey includes all persons aged 15 and over except:
- members of the permanent defence forces;
- certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations;
- overseas residents in Australia; and
- members of non-Australian defence forces (and their dependants) stationed in Australia.

From July 1993 Jervis Bay Territory has been excluded from the scope of the survey. Before July 1993 it was included in estimates for the Australian Capital Territory.

**COVERAGE** 

- In the Labour Force Survey, coverage rules are applied which aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection. The chance of a person being enumerated at two separate dwellings in the one survey is considered to be negligible. See paragraph 45 for information about the effect of the coverage rules on family statistics.
- 10 Persons who are away from their usual residence for six weeks or less at the time of interview are enumerated at their usual residence (relevant information may be obtained from other usual residents present at the time of the survey).

POPULATION BENCHMARKS

11 Labour Force Survey estimates of persons employed, unemployed and not in the labour force are calculated in such a way as to add up to the independently estimated distribution of the usually resident population aged 15 and over by age and sex. This procedure compensates for under-enumeration in the survey, and leads to more reliable estimates. Persons who, at the time of interview, are overseas for more than six weeks but for less than 12 months are included in the independent population statistics (benchmarks) and are thus provided for in the calculation of the estimates. The benchmarks are the latest available estimates at the time the Labour Force Survey is conducted, but they usually differ from the official population estimates subsequently published in Australian Demographic Statistics (3101.0) because they are derived from incomplete information about population changes.

REVISION OF POPULATION **BENCHMARKS** 

**12** Survey estimates are not revised for the usually small amendments of population benchmarks arising from new data on deaths and overseas and internal migration. Revisions are made, however, after each Census of Population and Housing, and when population estimation bases are reviewed. These revisions affect original, seasonally adjusted and trend estimates. The last such revision was made in February 1999 to take account of the results of the 1996 Census of Population and Housing. This revision affected all the monthly estimates from January 1995 to January 1999.

REVISION OF POPULATION BENCHMARKS continued

13 Population benchmarks used in the estimation of Labour Force Survey data are compiled according to place of usual residence. An explanation of the place of usual residence conceptual basis for population estimates is given in Demographic Estimates and Projections: Concepts, Sources and Methods (3228.0) which is available on the ABS web site www.abs.gov.au under Statistical Concepts Library.

HISTORY OF THE SURVEY

14 National surveys were conducted in February, May, August and November each year from 1964 to February 1978. The survey has been conducted on a monthly basis since February 1978.

QUESTIONNAIRE CHANGES

15 The questionnaire used in the survey for the collection of labour force data has been revised from time to time. Details of these changes have been published in Information Paper: Questionnaires Used in the Labour Force Survey (6232.0) in March 1978, December 1981, August 1984, June 1986, June 1991 and March 1993. The most recent change was in February 1998, to include references to Centrelink.

INCLUSION OF **CONTRIBUTING FAMILY WORKERS** 

- 16 In April 1986, the questionnaire was revised following the extension of the definition of employed persons to include persons who worked without pay between 1-14 hours per week in a family business or on a farm (i.e. contributing family workers). This definition aligned the Australian labour force concepts with the set of definitions adopted by the 13th International Conference of Labour Statisticians in October 1982.
- **17** Previously, contributing family workers who worked 1–14 hours, or who had such a job but were not at work, were defined as either unemployed or not in the labour force, depending on whether they were actively looking for work. In order to assist users to assess the impact of the change, estimates for March 1986 based on the new definition were shown in footnotes to tables 1 and 2 of the February, March and April 1987 issues of this publication.

COMPARABILITY OF SERIES

- **18** As a result of changes in coding methods, estimates classified by industry, occupation and status in employment data from February 2000 onwards are not strictly comparable with earlier periods. For details on the changes to industry and occupation refer to the article in the November 1999 issue of this publication. For details of the change to status in employment see the article in the May 2000 issue of this publication.
- **19** As noted in paragraph 12, estimates from January 1995 to January 2000 were revised to conform to revised population estimates following the 1996 Census of Population and Housing, and are thus not strictly comparable with estimates for periods prior to January 1995. An examination of the revised population estimates showed that the effects on Labour Force Survey estimates for the period before January 1995 were inconsequential, and that no meaningful purpose would be served by publishing revised estimates for that period.

COMPARABILITY OF SERIES continued

- **20** Comparability with estimates produced from the quarterly Survey of Employment and Earnings is affected by the use of a different survey methodology and definitions. The Labour Force Survey provides estimates of people in jobs whereas the Survey of Employment and Earnings provides an estimate of the number of jobs held by employees. A more detailed description of the differences between these two series is available on request.
- 21 From December 1989 onwards, the category 'other families' was split into 'one-parent families' and 'other families'. Therefore estimates of other families were not strictly comparable with estimates in previous issues. However, in November 1989, 97% of other families with dependants were one-parent families. In March 1994, a new families classification was introduced which also affected comparability (see paragraphs 47 to 49).

SURVEY SAMPLE REDESIGN

- **22** Following each Population Census, the ABS reselects the Labour Force Survey sample to take into account the new information which is obtained from the Census. The sample that was used in the Labour Force Survey from September 1992 to August 1997 has been replaced by a new sample selected using information collected in the 1996 Census. The new sample was phased in over the period September 1997 to April 1998. For additional information, see Information Paper: Labour Force Survey Sample Design (6269.0).
- 23 The sampling fractions for each State/Territory differ in order to yield reliable estimates of the main labour force aggregates for each State and Territory. The sampling fractions for the current sample together with the sampling fractions determined from the 1991 Census are:

	1991 Census redesign	1996 Census redesign
New South Wales	1 in 277	1 in 300
Victoria	1 in 242	1 in 257
Queensland	1 in 195	1 in 222
South Australia	1 in 139	1 in 147
Western Australia	1 in 146	1 in 160
Tasmania	1 in 75	1 in 83
Northern Territory	1 in 75	1 in 85
Australian Capital Territory	1 in 75	1 in 85

RELIABILITY OF THE **ESTIMATES** 

- **24** Estimates in this publication are subject to two sources of error:
- sampling error: since the estimates are based on information obtained from occupants of a sample of dwellings they, and the movements derived from them, may differ from the figures that would have been produced if all dwellings had been included in the survey. More information on this topic is given in the Technical Notes; and

RELIABILITY OF ESTIMATES continued

non-sampling error: inaccuracies may occur because of imperfections in reporting by respondents and interviewers and errors made in coding and processing data. These inaccuracies may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

DIFFERENCES BETWEEN CENSUS AND LABOUR FORCE SURVEY ESTIMATES

- 25 The results of the 1996 Census of Population and Housing show that labour force estimates derived from the Census differ from those derived from the Labour Force Survey.
- 26 The broad concepts underlying the measures of the labour force and its components, employment and unemployment, are similar in the Census and the survey.
- **27** There are considerable differences in both the collection methodology adopted (including the detailed questions asked) and estimation procedures. Factors contributing to differences in estimates include under-enumeration in the Population Census for which census labour force estimates have not been adjusted, the use in the Labour Force Survey of population benchmarks derived from incomplete information about population change (see paragraph 11), the inclusion of permanent defence forces in census estimates, the personal interview approach adopted in the survey as opposed to self-enumeration of census schedules, differing questions used to determine labour force characteristics and differing methods of adjustment for non-response to the survey or Census.
- 28 The Labour Force Survey provides detailed and up-to-date estimates of employment and unemployment for Australia, States and regions, whereas the Census of Population and Housing provides counts for small areas but in less detail than is available from the survey.
- 29 These considerations should be borne in mind when comparisons are made between Population Census and Labour Force Survey estimates.

SEASONAL ADJUSTMENT

**30** Seasonally adjusted series are published in tables 2, 8, 24 and 39. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be recognised more clearly. Seasonal adjustment does not remove the irregular or non-seasonal influences which may be present in any particular month. This means that month-to-month movements of the seasonally adjusted estimates may not be reliable indicators of trend behaviour. For example, irregular factors unrelated to the trend account for more than half the seasonally adjusted movement in series at the Australia level, with the following frequency:

## SEASONAL ADJUSTMENT continued

Series	Monthly movements				
Employment	6 in 10				
Unemployment	8 in 10				
Unemployment rate	7 in 10				
Participation rate	9 in 10				

31 The seasonal factors for all seasonally adjusted series are reviewed annually to take account of each additional year's original data. The latest review, in February 2000, revised the Australian and State seasonally adjusted and trend monthly series back to February 1978. For information about the method of adjustment, please refer to the feature article in the February 2000 issue of this publication. Revised seasonally adjusted and trend estimates for all months for Australia and the States are available on request. Inquiries concerning this data should be directed to Michael Johnson on Canberra 02 6252 6525.

#### TREND ESTIMATION

- **32** Smoothing seasonally adjusted series produces a measure of trend by reducing the impact of the irregular component of the series. The monthly trend estimates are derived by applying a 13-term Henderson-weighted moving average to all months except the last six. The last six monthly trend estimates are obtained by applying surrogates of the Henderson average to the seasonally adjusted series. Quarterly trend estimates (e.g. employment by industry) are derived by applying a 7-term Henderson moving average to the seasonally adjusted series. The 7-term Henderson average also uses surrogate forms of the average as the end of a time series is approached. Unlike the surrogate weights of the 13-term Henderson used on monthly data, the weights employed here are tailored to suit the particular characteristics of individual series. These trend series are used to analyse the underlying behaviour of the series over time. Trend series graphs are shown on pages 4 to 7 with the trend series published in tables 3, 9, 24 and 40. Long term data are available on the ABS on-line data dissemination service, PC Ausstats.
- 33 While this smoothing technique enables estimates to be produced which include the latest month, it does result in revisions to the most recent months as additional observations become available. Generally, subsequent revisions become smaller, and after three months or two quarters have a negligible impact on the series. There will also be revisions as a result of the annual review of seasonal factors mentioned above in paragraph 31.

TREND ESTIMATION continued

- 34 Trend estimates for the Australian Capital Territory and the Northern Territory are published in table 9. Original estimates for the two Territories have shown, historically, a high degree of variability, which can lead to considerable revisions to the seasonally adjusted estimates after each annual seasonal factor re-analysis. Seasonally adjusted estimates are not currently published for the two Territories. The most recent six months trend estimates are subject to revision. For the three most recent months, the revision may be relatively large. Inferences about trends drawn from smoothed seasonally adjusted (trend) estimates for months earlier than the latest three months are unlikely to be affected by month-to-month revisions. They may, however, be revised as a result of the annual re-analysis of seasonal factors.
- **35** Users may wish to refer to the ABS publication A Guide to Interpreting Time Series — Monitoring 'Trends' an Overview (1348.0) for further information about trend estimates. Details of the trend weighting patterns are available on request from the Assistant Director, Time Series Analysis on Canberra 02 6252 6345.
- **36** Care should be taken in the interpretation of month-to-month movements in these estimates. Survey estimates are subject to sampling and non-sampling variability as explained in paragraph 24.
- 37 In order to minimise respondent load and at the same time maintain continuity within the population survey sample, one-eighth of the dwellings are replaced after each survey. Adoption of this rotation procedure, whereby about seven-eighths of the sample remains unchanged from one month to the next, enables more reliable measurements of changes in the labour force characteristics of the population to be made than would be possible if a new sample were introduced each month.
- **38** Because a high proportion of private dwellings selected in one survey remains in the sample for the following survey, it is possible to match the characteristics of most of the persons in those dwellings from one month to the next, to record any changes that occur, and hence to produce estimates of flows between the different categories of the population and labour force.
- **39** The procedures used to select persons in non-private dwellings preclude the possibility of matching any of them who may be included in successive surveys. The mobility of the population and non-response in either or both surveys means that about 10% of persons in private dwellings which are included in the sample in successive months cannot be matched. The introduction of the new sample means less persons will be common between August, September and October 1997. Normally those who can be matched represent about 80% of all persons in the survey.

MONTH-TO-MONTH **MOVEMENTS** 

**GROSS FLOWS** 

GROSS FLOWS continued

- **40** Changes in the characteristics of this latter group are shown in the gross flows table (table 28). About two-thirds of the remaining (unmatched) 20% of persons in the survey are likely to have characteristics similar to those in the matched group, but the characteristics of the other third are likely to be somewhat different.
- 41 Gross flow estimates relate only to those persons in private dwellings for whom information was obtained in successive surveys. The expansion factors used in calculating the estimates were those applying to the second of each pair of months. Note that the estimates have not been adjusted to account for the unmatched sample component.
- **42** Although it is not possible to provide gross flow estimates for all persons in the survey it is considered that the estimates derived from matched records will be a useful guide to the proportions of the movements between categories which underlie the changes in monthly levels. When comparing flows for different periods it is important to take into account the population represented by the matched sample, as shown in the last line of the table.
- 43 While every effort is made to reduce non-sampling errors to a minimum, any such errors affecting labour force status will tend to accumulate in the gross flow statistics rather than to cancel out. The estimates are also subject to sampling variability, as explained in the Technical Notes. For these reasons the estimates of flows should be used with caution. The standard errors may be obtained from table A of the Technical Notes.

LABOUR FORCE STATUS AND OTHER CHARACTERISTICS OF **FAMILIES** 

- 44 As a part of survey procedures, family relationships are determined each month, enabling both the estimation of persons cross-classified by their relationship in the household and the estimation of families. This publication contains tables showing the labour force status and family status of individuals and families classified by family type, number of family members, the labour force status of persons within families, the number of children under 15 present and the number of dependants present.
- **45** Because of the coverage rules, persons who usually live with other members of their family may, at the time of the survey, be enumerated as not living with all the usual members of their family. This situation is more likely for persons who are enumerated as visitors to other private dwellings or as persons staying in non-private dwellings (hotels, hospitals, etc.). The determination of family structure and family characteristics in such cases is difficult.

LABOUR FORCE STATUS AND OTHER CHARACTERISTICS OF **FAMILIES** continued

Thus for survey questions used to determine family relationships, scope was further restricted to usual residents of private dwellings and the following persons were excluded:

- all persons enumerated in non-private dwellings (including hotels, motels, hospitals and other institutions); and
- persons enumerated as visitors to (rather than usual residents of) private dwellings.

46 In addition, in those households where it was not possible to obtain information relating to all the usual residents, no family information was recorded. Thus persons living in households which include a member of the permanent defence forces, who is outside the scope of the population survey, are excluded from survey questions used to determine family relationships because family information could not be obtained from each usual resident. Similarly households which, at the time of the survey, have one or more of their usual residents away for more than six weeks, are excluded from the family survey. This also applies to households from which an incomplete or inadequate questionnaire was obtained for any usual resident in on scope and coverage. A summary of those persons for whom family information is obtained as well as those usual residents of private dwellings for whom complete family information cannot be obtained, and those persons specifically excluded from the family determination procedures is contained in the family tables. Generally, relationship in household is determined for more than 90% of all civilians aged 15 and over.

CHANGES IN FAMILIES **CLASSIFICATIONS** 

- **47** Relationship in household and Family type classifications were introduced in the March 1994 issue of this publication to align with ABS standards. Most categories in the two classifications remain comparable with categories in the previous classifications. The cases in which there are breaks in comparability are discussed in the following paragraphs.
- **48** Relationship in bousehold. This classification was previously referred to as Family status.
- Lone parents (previously referred to as Sole parents) now includes parents with non-dependent children (provided those children are without a spouse or children of their own). These Lone parents without dependants are shown separately in table 30 and there were 205,800 such persons in March 1994.
- Dependent students (previously Full-time students aged 15–24) now comprise sons or daughters (of a couple or a lone parent) aged 15-19 attending school or aged 15-24 attending a tertiary educational institution full time. Other related full-time students, who were also previously classified as Full-time students aged 15-24 are now included in Other family persons. There were 24,200 such persons in March 1994.

CHANGES IN FAMILIES CLASSIFICATIONS continued

- Other family persons now comprises the previous groups Other family head, excluding those now counted as Lone parents (79,200 persons in March 1994), the other related full-time students previously classified as Full-time students aged 15-24 (see above; 24,200 in March 1994) and Other relative of married couple or family head (218,100 in March 1994).
- **49** Family type. This classification was previously referred to as Type of family. There are three types of families in the new classification, as follows:
- Couple families is the term used to describe families previously referred to as Married-couple families. Apart from the name change, the new category is otherwise exactly comparable with the old category.
- One-parent families now includes those families in which there is a lone parent with only non-dependent children present. Such families were previously included in Other families. There were 208,400 of these families in March 1994.
- Other families now excludes those families in which there is a lone parent with only non-dependent children present (see above).
- **50** Estimates of the number of families in this publication differ from those in publications prior to the April 1986 issue. This is due to the adoption of a weighting procedure where the weight for a family is determined using an average of the weights for all family members responding to the Labour Force Survey. Previously, the weight used to derive estimates of the number of families was determined by nomination of a proxy 'head of household' as representative of the family. Additional tables were included in the April 1986 issue of this publication to show the impact of this new procedure.
- 51 From April 1991, labour force birthplace data are aggregated according to major groups of the Standard Australian Classification of Countries (SACC) (1269.0) and its predecessor. The SACC was developed by the ABS for use whenever demographic, labour and social statistics are classified by countries.
- **52** The SACC major groups are based on the concept of geographic proximity. They differ from the country groups presented in this publication prior to April 1991. For example, African countries are now covered by 'The Middle East and North Africa' and 'Africa (excluding North Africa)', while Asia has been split into 'Southeast Asia', 'Northeast Asia' and 'Southern Asia'. Data for selected individual countries will continue to be available in this publication.

**BIRTHPLACE** 

**INDUSTRY** 

53 From August 1994, Labour Force Survey industry data are classified according to the Australian and New Zealand Standard Industrial Classification (ANZSIC), a detailed description of which appears in ANZSIC 1993 (1292.0). Like the previous Australian Standard Industrial Classification (ASIC), ANZSIC classifies businesses according to their economic activities, in a structure consisting of 4 levels (Division, Subdivision, Group and Class). Labour Force Survey data are coded at the Group level, as was the practice under ASIC.

**54** To enable the conversion of historical data from ASIC to ANZSIC for the period November 1984 to May 1994, a concordance was published in the August 1994 issue of this publication and in the Information Paper — Labour Force Survey: Introduction of ANZSIC for Industry Data (Replacement Publication) (6259.0). It has been found that the concordance, which was based on preliminary investigations, did not provide the most appropriate conversion for certain Group level industries. An improved concordance has now been applied to historical Labour Force Survey estimates. This concordance was published in an appendix to the May 1996 issue of this publication, and in a further issue of the above Information Paper. For further information about the new concordance or the availability of data, contact Mark Webb on Canberra 02 6252 6525.

**OCCUPATION** 

55 From August 1996, Labour Force Survey occupation data are classified according to the Australian Standard Classification of Occupations (ASCO) Second Edition, a detailed description of which appears in ASCO — Australian Standard Classification of Occupations, Second Edition (1220.0). The new version of the classification replaces ASCO First Edition, which was adopted in the survey in August 1986. Like ASCO First Edition, ASCO Second Edition is a skill-based classification of occupation. However, the structure of ASCO Second Edition comprises five hierarchical levels (Major Group, Sub-Major Group, Minor Group, Unit Group and Occupation) compared with four levels in ASCO First Edition (Major Group, Minor Group, Unit Group and Occupation). Under ASCO Second Edition, Labour Force Survey data are coded to the Unit Group level, as was the practice under ASCO First Edition.

ADDITIONAL DATA

- **56** Estimates for employed persons classified by industry, occupation and status in employment are available each February, May, August and November. For these months, additional tables containing the following data are included in this publication:
- Employed persons by industry:
  - Original, seasonally adjusted and trend;
  - Full-time and part-time workers;
  - Status in employment;
  - Age and birthplace;
  - Hours worked;
  - Divisions and subdivisions;
  - Industry by occupation;
- Employed persons by occupation:
  - Full-time and part-time workers;
  - Status in employment;
  - Age and birthplace;
  - Hours worked;
  - Major, sub-major, and selected minor groups;
- Unemployment rate by industry of last full-time job;
- Unemployment rate by occupation of last full-time job.

Seasonally adjusted estimates of employed persons by industry have been published in this bulletin since February 1993. Trend estimates have been published since August 1994.

#### **TECHNICAL NOTES**

1 A new sample for the Labour Force Survey has been phased in over the period September 1997 to April 1998. For information about the sample design see Information Paper: Labour Force Survey Sample Design (6269.0).

**ESTIMATION PROCEDURE** 

The labour force estimates are derived from the population survey by use of a complex ratio estimation procedure, which ensures that the survey estimates conform to an independently estimated distribution of the population by age and sex, rather than to the age and sex distribution within the sample itself.

RELIABILITY OF THE **ESTIMATES** 

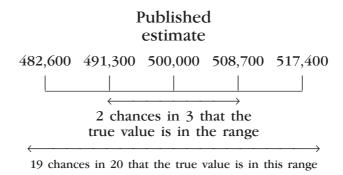

- Two types of error are possible in an estimate based on a sample survey: sampling error and non-sampling error. The sampling error is a measure of the variability that occurs by chance because a sample, rather than the entire population, is surveyed. Since the estimates in this publication are based on information obtained from occupants of a sample of dwellings they, and the movements derived from them, are subject to sampling variability; that is, they may differ from the estimates that would have been produced if all dwellings had been included in the surveys. One measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included. There are about two chances in three that a sample estimate will differ by less than one standard error from the estimate that would have been obtained if all dwellings had been included, and about nineteen chances in twenty that the difference will be less than two standard errors. Another measure of sampling variability is the relative standard error which is obtained by expressing the standard error as a percentage of the estimate to which it refers. The relative standard error is a useful measure in that it provides an immediate indication of the percentage errors likely to have occurred due to sampling, and thus avoids the need to refer also to the size of the estimate.
- The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by respondents, errors made in collection such as in recording and coding data, and errors made in processing the data. Inaccuracies of this kind are referred to as the non-sampling error and they may occur in any enumeration, whether it be a full count or a sample. It is not possible to quantify non-sampling error, but every effort is made to reduce it to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures. For the examples on page 65 it is assumed to be zero. In practice, the potential for non-sampling error adds to the uncertainty of the estimates caused by sampling variability.

## RELIABILITY OF THE **ESTIMATES** continued

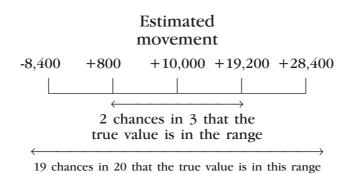

- Space does not allow for the separate indication of the standard errors of all estimates in this publication. Standard errors of estimates for the latest month and of estimates of movements since the previous month are shown in table 1. Standard errors of other estimates and other monthly movements should be determined by using tables A and B.
- The size of the standard error increases with the level of the estimate, so that the larger the estimate the larger is the standard error. However, it should be noted that the larger the sample estimate the smaller will be the standard error in percentage terms. Thus, larger sample estimates will be relatively more reliable than smaller estimates.
- As the standard errors in table A show, the smaller the estimate the bigher is the relative standard error. Very small estimates are subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In the tables in this publication, only estimates with relative standard errors of 25% or less, and percentages based on such estimates, are considered sufficiently reliable for most purposes. However, estimates and percentages with larger relative standard errors have been included and are preceded by an asterisk (e.g. \*3.4) to indicate they are subject to high standard errors and should be used with caution.
- The movement in the level of an estimate is also subject to sampling variability. The standard error of the movement depends on the levels of the estimates from which the movement is obtained rather than the size of the movement. An indication of the magnitude of standard errors of monthly movements is given in table B. The estimates of standard error of monthly movements apply only to estimates of movements between two consecutive months. Movements between corresponding months of consecutive quarters (quarterly movements), corresponding months of consecutive years (annual movements) and other non-consecutive months, will generally be subject to somewhat greater sampling variability than is indicated in table B. Standard errors of quarterly movements can be obtained by multiplying the figures in table A by 1.04. Standard errors of all six monthly movements can be obtained by multiplying the figures in table A by 1.28. When using table A or table B to calculate standard errors of movements, refer to the larger of the two estimates from which the movement is derived.

## RELIABILITY OF THE **ESTIMATES** continued

- 9 Examples of the calculation and use of standard errors are given below:
- Consider an estimate for Australia of 500,000 employed persons aged 15-19. By referring to table A, in the row for an estimate of 500,000 and the column for Australia, a standard error of 8,700 is obtained. There are about two chances in three that the true value (the number that would have been obtained if the whole population had been included in the survey) is within the range 491,300 to 508,700. There are about nineteen chances in twenty that the true value is in the range 482,600 to 517,400.

• Consider estimates for females employed part time in Australia of 1,390,000 in one month and 1,400,000 in the next month. This represents an upward movement of 10,000. By referring to table B for the larger estimate of 1,400,000, a movement standard error of 9,200 is obtained (after applying linear interpolation and rounding). Therefore, there are about two chances in three that the true movement is in the range +800 to +19,200 and about nineteen chances in twenty that the true movement is in the range -8,400 to +28,400.

RELIABILITY OF THE **ESTIMATES** continued **10** The relative standard errors of estimates of aggregate hours worked, average bours worked, average duration of unemployment, and median duration of unemployment are obtained by first finding the relative standard error of the estimate of the total number of persons contributing to the estimate (see table A) and then multiplying the figure so obtained by the following relevant factors:

aggregate hours worked: 1.4;

average hours worked: 0.9;

average duration of unemployment: 1.5; and

median duration of unemployment: 1.7.

The levels at which these and other labour force estimates have a relative standard error of 25% are shown in table C.

11 The following is an example of the calculation of standard errors where the use of a factor is required:

- Consider a median duration of unemployment for Australia of 30 weeks, with an estimate of 1,000,000 persons unemployed. Table A gives the standard error as 11,350 which is 1.1% as a relative standard error. The factor of 1.7 (see paragraph 10) is applied to the relative standard error of 1.1% to obtain 1.9%. Therefore the standard error for the median duration of unemployment is 1.9% of 30 weeks, i.e. about half of one week. So there are two chances in three that the median duration of unemployment is between 29.5 and 30.5 weeks, and about nineteen chances in twenty that it is between 29 and 31 weeks.
- **12** Proportions and percentages (for example, unemployment rates) formed from the ratio of two estimates are also subject to sampling error. The size of the error depends on the accuracy of both the numerator and denominator. The formula for the relative standard error (RSE) of a proportion or percentage is given below:

RSE 
$$(x / y) = \sqrt{[RSE (x)]^2 - [RSE (y)]^2}$$

13 Standard errors contained in tables A and B are designed to provide an average standard error applicable for all monthly Labour Force Survey estimates. Analysis of the standard errors applicable to particular survey estimates has shown that the standard errors of estimates of employment are generally 5% lower than those shown in tables A and B, while standard errors for estimates of unemployment and persons not in the labour force are both approximately 4% higher than those shown in the tables.

### LEVELS AT WHICH LABOUR FORCE ESTIMATES HAVE A RELATIVE STANDARD ERROR OF 25%(a) FROM SEPTEMBER 1997(b)

	NSW	Vic.	Qld	SA	WA	Tas.	NT	ACT	Aust.
Estimates (c) of			-						
Aggregate hours worked	10 600	8 200	7 200	4 000	4 800	1 800	1 500	1 800	8 700
Average hours worked	4 600	3 800	3 700	2 000	2 400	800	700	1 000	3 500
Average duration of unemployment	10 400	9 600	7 300	4 100	5 000	1 800	1 100	1 900	10 400
Median duration of unemployment	16 800	12 700	10 800	6 000	7 200	2 800	2 500	2 600	14 300
All other estimates	5 900	4 500	4 100	2 400	2 800	1 100	1 000	1 100	4 400

<sup>(</sup>a) See Technical Notes, paragraph 10-11. (b) For standard errors for earlier periods, see previous issues of this publication. (c) The entries in this table refer to the number of persons contributing to the estimate.

### **GLOSSARY**

Actively looking for work

Includes writing, telephoning or applying in person to an employer for work; answering an advertisement for a job; checking factory noticeboards or the touchscreens at Centrelink offices; being registered with Centrelink as a jobseeker; checking or registering with any other employment agency; advertising or tendering for work; and contacting friends or relatives.

Aggregate hours worked

The total number of hours a group of employed persons has actually worked during the reference week, not necessarily hours paid for.

Attending school

Persons aged 15–19 who, during the reference week, were enrolled full time at secondary or high schools.

Attending tertiary educational institution full time

Persons aged 15–24 who, during the reference week, were enrolled full time at a TAFE college, university, or other tertiary educational institution.

Average duration of unemployment

For a group of unemployed persons, the aggregate duration of unemployment divided by the number of persons in the group.

Average family size

For any group of families, the total number of family members divided by the number of families in the group.

**Average hours worked** 

Aggregate hours worked by a group divided by the number of persons in that group.

Birthplace

From April 1991, classified according to the *Standard Australian Classification of Countries (SACC)* (1269.0).

**Contributing family worker** 

A person who works without pay, in an economic enterprise operated by a relative. (This category was formerly entitled unpaid family helper).

**Couple families** 

Families in which there are two married persons and these persons are husband and wife.

**Dependants** 

All family members under 15 years of age; all family members aged 15–19 attending school or aged 15–24 attending a tertiary educational institution full time (except those classified as husbands, wives or lone parents).

**Dependent student** 

In couple or one-parent families, sons or daughters aged 15–19 attending school or aged 15–24 attending a tertiary educational institution full time (except those classified as husbands, wives or lone parents).

**Duration of unemployment** 

The period from the time a person began looking for work or was stood down, to the end of the reference week. Thus the survey measures current (and continuing) periods of unemployment rather than completed spells. For persons who may have begun looking for work while still employed, the duration of unemployment is defined as the period from the time the person last worked full time for two weeks or more to the end of the reference week.

#### **Employed** Persons aged 15 and over who, during the reference week:

- worked for one hour or more for pay, profit, commission or payment in kind in a job or business, or on a farm (comprising employees, employers and own account workers); or
- worked for one hour or more without pay in a family business or on a farm (i.e. contributing family workers); or
- were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the reference week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the reference week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or
- were employers, own account workers or contributing family workers who had a job, business or farm, but were not at work.

#### **Employee**

An employee is a person who works for a public or private employer and receives remuneration in wages, salary, a retainer fee by their employer while working on a commission basis, tips, piece-rates or payment in kind, or a person who operates his or her own incorporated enterprise with or without hiring employees.

#### **Employer**

An employer is a person who operates his or her own unincorporated economic enterprise or engages independently in a profession or trade, and hires one or more employees.

## **Employment/population** ratio

For any group, the number of employed persons expressed as a percentage of the civilian population aged 15 and over in the same group.

#### **Family**

Two or more related persons (relationship includes relationships by blood, marriage or adoption) usually resident in the same household at the time of the survey. A family comprises a married couple or a family head as defined, together with any persons having any of the following relationships to them:

- sons or daughters of any age, if not married and with no children of their own present;
- other relatives if not accompanied by a spouse, sons or daughters, or parents of their own; or
- any children under 15 years of age who do not have a parent present.

Family head Any person without a spouse present:

- with a son or daughter aged under 15 present; or
- without a son or daughter aged under 15 present, but with a son or daughter aged 15 or over present (provided that the son or daughter has no spouse, son or daughter of his/her own present); or

Where a family has no person falling into either of these categories, the family head is generally defined to be the eldest person in the family.

No family head is determined for a couple family.

Former workers

Unemployed persons who have previously worked full time for two weeks or more but not in the past two years.

**Full-time workers** 

Employed persons who usually worked 35 hours or more a week (in all jobs) and others who, although usually working less than 35 hours a week, worked 35 hours or more during the reference week.

Household

A group of one or more persons in a private dwelling who consider themselves to be separate from other persons (if any) in the dwelling, and who make regular provision to take meals separately from other persons, i.e. at different times or in different rooms. Lodgers who receive accommodation but not meals are treated as separate households. Boarders who receive both accommodation and meals are not treated as separate households. A household may consist of any number of families and non-family members.

Industry

From August 1994, classified according to the Australian and New Zealand Standard Industrial Classification (ANZSIC) 1993 (1292.0).

Job leavers

Unemployed persons who have worked full time for two weeks or more in the past two years and left that job voluntarily, that is, because of unsatisfactory work arrangements/pay/hours; the job was seasonal, temporary or a holiday job and they left that job to return to studies; their last job was running their own business and they closed down or sold that business for reasons other than financial difficulties; or any other reasons.

Job losers

Unemployed persons who have worked full time for two weeks or more in the past two years and left that job involuntarily, that is, were laid off or retrenched from that job; left that job because of their own ill-health or injury; the job was seasonal, temporary or a holiday job and they did not leave that job to return to studies; or their last job was running their own business and the business closed down because of financial difficulties.

Labour force

For any group, persons who were employed or unemployed, as defined.

Labour force status A classification of the civilian population aged 15 and over into

> employed, unemployed or not in the labour force, as defined. The definitions conform closely to the international standard definitions adopted by the International Conferences of Labour Statisticians.

Lone parent The head of a one-parent family.

Lone person A person who is the sole member of a household.

Long-term unemployed Persons unemployed for a period of 52 weeks or more.

Main English speaking The United Kingdom, Ireland, South Africa, Canada, the United States of countries America and New Zealand.

**Marital status** Persons are classified as married (husband and wife) if they are reported

as being married (including de facto) and their spouse was a usual resident of the household at the time of the survey. The not-married category comprises persons who have never married, or are separated, widowed or divorced, as well as those who, although reported as being

married, did not have a spouse who usually lived in the household.

Median duration of The duration which divides unemployed persons into two equal groups, unemployment one comprising persons whose duration of unemployment is above the

median and the other, persons whose duration is below it.

Non-dependent child In couple or one parent families, sons or daughters aged 15 and over,

other than those classified as dependent students, husbands, wives or

sole parents.

Non-family member A person who is not related to any other member of the household in

which they are living.

Not in the labour force Persons who were not in the categories employed or unemployed, as

> defined. They include persons who were keeping house (unpaid), retired, voluntarily inactive, permanently unable to work, persons in institutions (hospitals, gaols, sanatoriums, etc.), trainee teachers, members of contemplative religious orders, and persons whose only activity during the reference week was jury service or unpaid voluntary work for a

charitable organisation.

**Occupation** From August 1996, classified according to the Australian Standard

> Classification of Occupations, Second Edition 1996 (Cat. no. 1220.0). See Information Paper: ASCO – Australian Standard Classification of

Occupations (1221.0).

**One-parent families** Families in which there is a family head together with at least one son or

daughter of his/her own.

Other families Families which are not couple families or one-parent families, as defined.

They include families in which there is no parent, for example a family

head living with a brother or sister.

#### **Own-account worker**

A person who operates his or her own unincorporated economic enterprise or engages independently in a profession or trade, and hires no employees (this category was formerly entitled self employed).

#### **Participation rate**

For any group, the labour force expressed as a percentage of the civilian population aged 15 and over in the same group. Participation rates for persons classified by birthplace are calculated using population estimates which exclude those in institutions. Participation rates for persons classified by school or tertiary educational institution attendance are calculated using population estimates which include those in institutions.

#### Part-time workers

Employed persons who usually worked less than 35 hours a week and who did so during the reference week.

## Seasonally adjusted series

A time series of estimates with the estimated effects of normal seasonal variation removed. See paragraphs 30 and 31 of the Explanatory Notes for more detail.

#### State capital cities

The areas determining the six State capital cities are the Statistical Divisions for those capital cities defined in the *Statistical Geography: Volume 1 - Australian Standard Geographical Classification (ASGC)* (1216.0).

#### Status in employment

Employed persons classified by whether they were employers, own account workers, employees, or contributing family workers.

### **Trend series**

A smoothed seasonally adjusted series of estimates. See paragraphs 32 to 35 of the Explanatory Notes for more detail.

#### Unemployed

Persons aged 15 and over who were not employed during the reference week, and:

- had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week and:
- were available for work in the reference week, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the reference week); or
- were waiting to start a new job within four weeks from the end of the reference week and would have started in the reference week if the job had been available then; or
- were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the reference week (including the whole of the reference week) for reasons other than bad weather or plant breakdown.

# Unemployed looking for first full-time job

Unemployed persons looking for full-time work who had never worked full time for two weeks or more.

# Unemployed looking for first job

Unemployed persons who had never worked full time for two weeks or more.

Unemployed looking for Unemployed persons who actively looked for full-time work or were to full-time work resume a full-time job from which they had been stood down. **Unemployed looking for** Unemployed persons who had actively looked for part-time work only, or part-time work were to resume a part-time job from which they had been stood down.

**Unemployed persons** Unemployed persons who had worked full time for two weeks or more classified by industry and in the last two years are classified according to the industry and occupation occupation of their most recent full-time job.

**Unemployment rate** For any group, the number of unemployed persons expressed as a percentage of the labour force in the same group.

## SUPPLEMENTARY SURVEYS

The Monthly Population Survey program collects data on particular aspects of the labour force. The following is an historical list of supplementary surveys to the monthly labour force surveys. The data are available in publication form, by subscription or on request. It may be possible to order unpublished data from these surveys by contacting the ABS.
