NOTES

ABOUT THIS PUBLICATION

This publication contains results relating to the Survey of Preferred Working Hours of Wage and Salary Earners conducted throughout Queensland in October 2006.

Information was obtained from wage and salary earners about the hours they usually work, the reasons they usually worked those hours, whether payment or compensation was received for additional hours, whether they would prefer to work more hours or fewer hours and, where applicable, the reasons they do not do so. Membership of a trade union, educational qualifications, income level and sources of income were also collected.

NOTES ABOUT THE ESTIMATES

Table 1 of this publication provides a comparison between selected data items from the 2006 survey and a similar survey conducted in 1999 (*Working Hours of Wage and Salary Earners, Queensland*, (cat. no. 6344.3). Owing to a difference in scope between these two surveys, the 2006 data has been adjusted to enable comparisons with 1999 data. For this reason there may be some small differences in the 2006 data between table 1 and the remainder of the tables in this publication. See Explanatory Notes, paragraph 12 for details on scope and other changes between the 1999 and 2006 surveys.

ROUNDING

Where figures have been rounded, discrepancies may occur between sums of the component items and totals. Published percentages are calculated prior to rounding of the figures and therefore some discrepancy may occur between these percentages and percentages calculated from the rounded figures.

SUMMARY OF FINDINGS

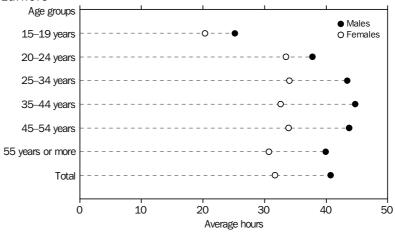

USUAL HOURS OF WORK

In October 2006, an estimated 1.6 million wage and salary earners resided in private dwellings in Queensland. Of these, 842,500 were male wage and salary earners who usually worked an average of 40.7 hours per week compared with 786,800 female wage and salary earners who usually worked an average of 31.7 hours per week.

In total, 505,000 (31.0%) wage and salary earners in Queensland usually worked more than 40 hours per week.

Across age groups, male wage and salary earners in the 35-44 years age group reported usually working the highest average hours per week (44.7 hours), while for female wage and salary earners, average hours usually worked per week were the highest for the 25-34 years age group (34.0 hours).

AVERAGE HOURS PER WEEK USUALLY WORKED, Wage and Salary Earners

Wage and salary earners with lower annual incomes tended to work fewer average usual hours per week than those with higher incomes.

Compared with wage and salary earners in other industries, those employed in Mining reported usually working the highest average weekly hours (50.3 hours). Of all occupation groups, Managers reported the highest number of average hours usually worked per week (45.4 hours).

MAIN REASON FOR USUAL HOURS OF WORK

The most common reason given by wage and salary earners for working their usual number of hours was that they were 'standard, award or contract hours'. Just over one-quarter (27.9%) of those working less than 16 hours per week reported 'study commitments' as a main reason, and 63.6% of those working more than 40 hours reported 'to get the job done' or 'expectation of the job'. Almost half (45.3%) of those who usually worked unpaid hours reported 'to get the job done' as the main reason for working their usual hours.

UNPAID HOURS OF WORK

One in five (19.9% or 323,600) wage and salary earners reported that they usually worked unpaid hours. Of male wage and salary earners, 19.5% (164,000) reported an average of 8.2 unpaid weekly hours and 20.3% (159,600) of female wage and salary earners reported an average of 7.0 unpaid weekly hours

UNPAID HOURS OF WORK continued

Education and Training was the industry with the highest proportion of wage and salary earners who reported usually working unpaid hours (47.0%), followed by Rental, Hiring and Real Estate Services (33.0%).

Of all occupation groups, Managers represented the highest proportion of wage and salary earners that usually worked unpaid hours (41.7% or 49,900) closely followed by Professionals (40.8% or 102,200).

Most wage and salary earners who usually worked unpaid hours (62.7% or 203,000) received neither an allowance in their pay for unpaid hours worked nor time off in lieu.

A quarter of wage and salary earners who worked unpaid hours (24.5% or 79,300) received only time off in lieu for these hours and 6.4% (20,800) received only an allowance in their pay.

PAID OVERTIME

In October 2006, 206,400 (12.7%) wage and salary earners reported that they usually worked paid overtime hours.

Of all male wage and salary earners, 18.9% (159,500) worked an average of 7.6 hours of paid overtime per week while 6.0% (47,000) of female wage and salary earners worked an average of 4.5 hours of paid overtime per week.

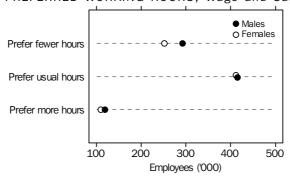

Manufacturing (27.6%) and Construction (27.2%) were the industries with the highest proportions of wage and salary earners working paid overtime.

Of all occupation groups, 'Machinery Operators and Drivers' and 'Technicians and Trades Workers' had the highest proportions of wage and salary earners who reported usually working some paid overtime each week (29.2% and 26.4%, respectively). In comparison, Managers (5.3%) and Sales Workers (5.1%) had the lowest proportion of wage and salary earners who reported usually working some paid overtime each week.

PREFERRED WORKING HOURS

Just over half of all wage and salary earners preferred their usual hours per week (50.8% or 828,000) while one-third (33.4% or 545,300) reported that they would like to work fewer hours. The remainder (14.1% or 229,500) reported that they would like to work more hours per week.

PREFERRED WORKING HOURS, Wage and Salary Earners

Prefer fewer hours

Of those who usually work some unpaid hours (323,600 or 19.9%), most (58.1%) preferred to work fewer hours per week.

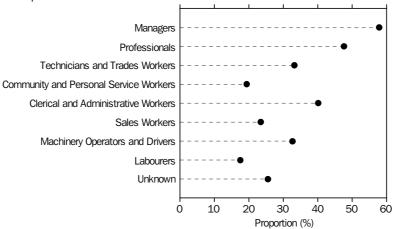

SUMMARY OF FINDINGS continued

Prefer fewer hours continued

The Financial and Insurance Services industry had the highest proportion of wage and salary earners who would prefer to work fewer hours (48.3%). Of these, 24.0% were willing to work fewer hours for less pay.

More than half of Managers (57.8%) reported that they would prefer to work fewer hours per week with 22.3% of these wage and salary earners willing to work fewer hours for less pay. Similarly, almost half of Professionals (47.6%) reported that they would prefer to work fewer hours with 24.0% of these wage and salary earners being willing to work fewer hours for less pay.

EMPLOYEES WHO WOULD PREFER TO WORK FEWER HOURS, by Occupation

The most common reasons given for preferring to work fewer hours was 'leisure/ more time for self/ lifestyle' (50.4%) and 'prefer to spend more time with family' (28.2%).

The most common reason reported by wage and salary earners (who preferred fewer hours) for <u>not</u> working fewer hours was 'income needs' (37.4%).

Prefer more hours

The Accommodation and Food Services industry had the highest proportion of wage and salary earners who would prefer to work more hours (25.8%). Of all the occupation groups, Labourers had the highest proportion of wage and salary earners who would prefer to work more hours (23.3%).

COMPARISON BETWEEN 1999 AND ADJUSTED 2006 DATA This section provides a comparison between selected data items from the 2006 survey and a similar survey conducted in 1999 (Working Hours of Wage and Salary Earners, Queensland). Owing to a difference in scope between these two surveys, the 2006 data has been adjusted to compare with 1999 data.

In October 2006, the proportion of wage and salary earners who reported that they usually worked more than 40 hours (31.0%) was similar to that reported in 1999 (30.7%).

From 1999 to 2006, the proportion of male wage and salary earners working paid overtime increased from 16.8% to 19.0% while the proportion of female wage and salary earners working paid overtime remained relatively stable over the same time period, 6.1% in 1999 and 6.0% in 2006.

SUMMARY OF FINDINGS continued

COMPARISON BETWEEN
1999 AND ADJUSTED
2006 DATA continued

From 1999 to 2006, the proportion of female wage and salary earners working unpaid hours increased by 2.0 percentage points (18.3% to 20.3%). This compares to a decrease of 0.9 percentage points for male wage and salary earners working unpaid hours over the same time period (20.2% to 19.3%).

From 1999 to 2006, the proportion of male wage and salary earners who preferred to work fewer hours increased 0.7 percentage points to 34.5% while the proportion for females rose 3.1 percentage points to 31.9%.

EXPLANATORY NOTES

INTRODUCTION

- **1** This publication summarises the results of the survey of Preferred Working Hours of Wage and Salary Earners. This survey was conducted throughout Queensland during October 2006 as a supplement to the Australian Bureau of Statistics (ABS) Monthly Population Survey (MPS) which is described in Labour Force, Australia (cat. no. 6203.0).
- **2** Information was obtained only for persons who were usual residents of private dwellings within Queensland, and satisfied either of the following job characteristics:
 - persons who had only one job were required to be a wage and salary earner in that iob
 - persons with more than one job were required to be a wage and salary earner in their main job.
- **3** The survey collected information on characteristics of wage and salary earners, such as usual hours worked, unpaid overtime, paid overtime, preferred working hours and related socio-demographic characteristics such as highest non-school qualification.

SURVEY METHODOLOGY

4 The MPS is based on a multi-stage area sample of private dwellings (houses, flats, etc.) and a list sample of non-private dwellings (hotels, motels, etc.). The survey was conducted using seven-eighths of the full sample of private dwellings in Queensland that were included in the MPS. Sparsely populated areas were excluded. Information was obtained from the occupants of the selected dwellings by specially trained interviewers.

SCOPE

- **5** The survey questions were asked of all persons within the selected households who were aged 15 years or over and were wage or salary earners, with the following exceptions:
 - visitors to the selected dwelling;
 - members of permanent defence forces;
- certain diplomatic personnel of overseas governments, customarily excluded from censuses and surveys;
- overseas residents in Australia; and
- members of non-Australian defence forces (and their dependents) stationed in Australia.
- **6** Information was sought from approximately 5,400 persons of whom about 5,000 (93%) responded.

COVERAGE

7 For the survey, coverage rules were applied which aimed to ensure that each person was associated with only one dwelling, and hence had only one chance of selection in the survey.

DATA COLLECTION

- **8** Information was obtained for the occupants of selected dwellings by personal or telephone interviews, conducted during the two weeks commencing 9 October 2006. Interviewers for the survey were obtained from a panel of trained interviewers who have extensive experience in conducting household surveys.
- **9** One responsible adult member of each selected household was interviewed, answering questions regarding themselves and/or other persons in scope within that household. It is possible that some answers supplied by the responding person may be different to what would have been answered by the in-scope person themselves. Therefore, care should be taken when interpreting the results of this survey, for although it has been estimated that the error resulting from this occurrence is small, its impact has not been quantified. See Technical Note paragraph 2 regarding non-sampling error.

INDUSTRY AND OCCUPATION

10 Industry and occupation of employment were not collected in this survey nor in the October 2006 labour force survey. However, records from this supplementary survey were matched with the November 2006 labour force survey when questions regarding the industry and occupation of employment were asked. Where there was no matching November record, industry and occupation were coded as 'unknown'.

EXPLANATORY NOTES continued

EFFECTS OF ROUNDING

11 Figures have been rounded and discrepancies may occur between totals and the sums of the component items.

COMPARABILITY WITH 1999 DATA

- **12** This survey was a repeat of a similar survey conducted in 1999 (Working Hours of Wage and Salary Earners, Qld, October 1999 (cat. no. 6344.3)). The 2006 survey used some reworded questions (mainly those relating to educational qualifications), and a different scope compared to the 1999 survey. The difference in scope was:
 - the 2006 survey includes persons who were wage and salary earners in their <u>main</u> job
 - the 1999 survey includes persons who were wage and salary earners in <u>all</u> of their jobs.

ACKNOWLEDGEMENT

13 ABS publications draw extensively on information provided freely by individuals, businesses, governments and other organisations. Their continued cooperation is very much appreciated. Without it, the wide range of statistics published by the ABS would not be available. Information received by the ABS is treated in strict confidence as required by the *Census and Statistics Act, 1905*.

RELATED PUBLICATIONS

14 Other ABS publications which include information on Wage and Salary Earners include:

Working Hours of Wage and Salary Earners, Queensland, October 1999 (cat. no. 6344.3)

Working Arrangements, Australia, November 2003 (cat. no. 6342.0)

Wage and Salary Earners, Public Sector, Australia, December 2006 (cat. no. 6248.0.55.001)

Underemployed Workers, Australia, September 2006 (cat. no. 6265.0) Labour Force, Australia, November 2006 (cat. no. 6302.0)

15 Current publications and other products released by the ABS are listed in the Catalogue of Publications and Products (cat. no. 1101.0). The Catalogue is available from the ABS web site <www.abs.gov.au>. The ABS also issues a daily Release Advice on the web site which details products to be released in the week ahead.

ADDITIONAL DATA AVAILABLE

- **16** In addition to the statistics provided in this publication, the ABS can produce customised tabulations on request. Subject to confidentiality and sampling variability constraints, tabulations can be produced by cross-classifying data items for the relevant survey populations.
- **17** Additional available data for this survey of Preferred Working Hours of Wage and Salary Earners include:
 - number of hours prefer to work;
 - sources of income (multiple response possible);
 - main source of income; and
 - type of post-school qualification.
- **18** Subject to confidentiality and data quality restrictions, all data items can be cross-classified with person items available from the Monthly Population Survey, such as labour force region, household type and country of birth.
- **19** This additional data is available on a fee-for-service basis. For further information about this service, please contact ABS Queensland Statistical Consultancy Unit on 07 3222 6012.

TECHNICAL NOTE DATA RELIABILITY

RELIABILITY OF THE ESTIMATES

NON-SAMPLING FRROR

- **1** The estimates provided in this publication are based on information obtained from the occupants of a sample of dwellings and may be subject to two types of error: sampling error and non-sampling error.
- **2** Non-sampling errors may arise as a result of errors in the reporting, recording or processing of data and can occur even if there is complete enumeration of the population. Non-sampling error can be introduced through inadequacies in the questionnaire, non-response, inaccurate reporting by respondents, error in the application of survey procedures, incorrect recording of answers and errors in data entry and processing.
- **3** It is difficult to measure the size of the non-sampling error. The extent of these errors can vary considerably from survey to survey and even from question to question. Every effort is made during the design and development of the survey to minimise the effect of these errors.
- **4** The methodology employed for this survey of asking questions of one adult only within a household, who answers for all in-scope members of the household, is one possible source of non-sampling error. Every effort is made in the design of the survey and the development of survey procedures to minimise the effect of this type of error.

SAMPLING ERROR

ESTIMATES OF SAMPLING ERROR

- **5** This is the difference which would be expected between the estimate and the corresponding figure that would have been obtained if all dwellings in Queensland had been included in the survey, using the same questionnaires and procedures.
- **6** One measure of the sampling error which occurs as a result of surveying only a sample of the population is the standard error (SE) (see Table T1).
- **7** There are about two chances in three (67%) that the survey estimate will differ by less than one SE from the figure that would have been obtained if all persons in Queensland had been included in the survey and about nineteen chances in twenty (95%) that the difference will be less than two standard errors.
- **8** The standard error can also be expressed as a percentage of the estimate. This is known as the relative standard error (RSE) and is determined by dividing the standard error of the estimate SE(x) by the estimate x and expressing it as a percentage. That is: RSE(x) = 100 * SE(x)/x (where x is the estimate). The RSE is a measure of the percentage error likely to have occurred due to sampling.
- **9** The following table gives approximate SEs and RSEs for this survey, for general application to estimates of counts. These figures will not give a precise measure of the SE of a particular estimate, but will provide an indication of its magnitude.

ESTIMATES OF SAMPLING ERROR continued

T1: STANDARD ERRORS OF ESTIMATES

		Relative
	Standard	Standard
Size of	Error	Error
estimate		%
estimate	no.	,-
100	250	250.0
200	330	165.0
300	390	130.0
500	470	94.0
700	540	77.1
1,000	620	62.0
1,500	730	48.7
2,000	810	40.5
2,500	900	36.0
3,000	950	31.7
3,500	1 000	28.6
4,000	1 050	26.3
5,000	1 150	23.0
7,000	1 300	18.6
10,000	1 500	15.0
15,000	1 750	11.7
20,000	1 950	9.8
30,000	2 300	7.7
40,000	2 550	6.4
50,000	2 800	5.6
100,000	3 600	3.6
150,000	4 350	2.9
200,000	5 200	2.6
300,000	6 800	2.3
500,000	9 300	1.9
1,000,000	13 700	1.4
2,000,000	19 350	1.0
5,000,000	28 550	0.6
10,000,000	36 450	0.4

10 Linear interpolation can be used to calculate the SE of estimates falling between the sizes of estimates listed in Table T1 above, by using the following general formula:

SE of estimate = lower SE +
$$\left[\left(\frac{\text{upper SE - lower SE}}{\text{upper estimate - lower estimate}} \right) \times (\text{estimate - lower estimate}) \right]$$

11 Estimates derived from very small sample sizes are subject to high RSEs, which can detract seriously from their value for most reasonable uses. In this survey, estimates between 4,120 and 1,385 have a RSE between 25% and 50% and have been indicated with the symbol '*'. Estimates smaller than 1,385 have a RSE greater than 50% and have been indicated with the symbol '**'.

PROPORTIONS AND PERCENTAGES

12 Percentages formed from the ratio of two estimates of the same type (such as proportions) are also subject to sampling error. The size of the error depends on the accuracy of both the estimate used as the numerator (x) and the estimate used as the denominator (y). The formula for the relative standard error of a proportion or percentage is given below:

$$RSE\left(\frac{x}{y}\right) = \sqrt{\left[RSE(x)\right]^2 + \left[RSE(y)\right]^2}$$

MEANS

13 This publication contains means. The mean is a measure for locating the centre of a set of values and is calculated by obtaining the arithmetic average of those values.

TECHNICAL NOTE DATA RELIABILITY continued

MEANS continued

- **14** The RSE of an estimate of the mean number of hours usually worked can be obtained by firstly finding the RSE of the estimate of the total number of persons contributing to the mean (see Table T1), then multiplying the RSE by the relevant factor below:
 - average hours usually worked in a week: 0.74
 - average unpaid hours usually worked in week: 1.23
 - average overtime hours usually worked in week: 1.09
- **15** The following is an example of the calculation of RSEs where the use of a factor is required. Publication Table 5 (see page 13) shows that the estimated number of males in Queensland who usually worked unpaid hours was 164,000. Table 5 also shows that the average number of unpaid hours worked per week by males is 8.2 hours. The SE for this estimate of 164,000 males can be calculated from Table T1 by interpolation (see paragraph 10) as 4,588. To convert this to a RSE, the SE is expressed as a percentage of the estimate, or $4,588/164,000 \times 100 = 2.8\%$.
- **16** Therefore, the RSE of the estimate of the mean number of unpaid hours usually worked in a week by males who usually work unpaid hours is calculated by multiplying this number (2.8%) by the appropriate factor shown in paragraph 14 (in this case 1.23): $2.8 \times 1.23 = 3.4\%$. The SE of the estimate of the mean number of unpaid hours usually worked in a week by males is therefore 3.4% of 8.2 hours (i.e. about 0.3 hours). Therefore, if this mean estimate were obtained by a census of the population rather than a sample, then there are 2 chances in 3 that the mean number of unpaid hours usually worked in a week by males would have been within the range 7.9 hours to 8.5 hours (one standard error either side of the estimate), and about 19 chances in 20 that it would have been within the range 7.6 hours to 8.8 hours (two standard errors either side of the estimate).

GLOSSARY

Dependent student A natural, adopted, step, or foster child who is 15-24 years of age and who attends a

secondary or tertiary educational institution as a full-time student and for whom there is no identified partner or child of his/her own usually resident in the same household.

Don't know On occasions when the 'any responsible adult' is unable to provide an answer to a

question on behalf of another resident in the household, 'don't know' is recorded.

Extra hours Hours worked in addition to what a person considers to be their standard working

hours. Equivalent to overtime.

Hours usually worked
Number of hours in total usually worked in a week, in all current jobs working for wages

and salary, including paid overtime, unpaid hours, work taken home, and weekend

work.

Husband, wife or partner with

dependants

Any persons living in a couple relationship with another person usually resident in the same household and has at least one dependent child. The couple relationship may be in either a registered or de facto marriage, and includes same-sex couples. The household may also include non-dependent children, other relatives and unrelated individuals.

Husband, wife or partner without dependants

Any persons living in a couple relationship with another person usually resident in the same household and does not have any dependent children. The couple relationship may be in either a registered or de facto marriage, and includes same-sex couples. The household may also include non-dependent children, other relatives and unrelated individuals.

Industry Classified according to the Australian and New Zealand Standard Industrial Classification

(ANZSIC) 2006 (cat. no. 1292.0)

Lone parent A lone parent is a person who has no spouse or partner usually resident in the

household, but who forms a parent-child relationship with at least one child usually resident in the household. The child may be either dependent or non dependent

resident in the household. The child may be either dependent or non-dependent.

Main job The job in which most hours were usually worked.

Non-dependent child A natural, adopted, step or foster child of a couple or lone parent usually resident in the

household, who is aged 15 years and over and is not a full-time student aged 15-24 years, and who has no identified partner or child of his/her own usually resident in the

household.

Non-family member A person for whom there is no identified couple relationship, parent-child relationship,

or other blood relationship with any of the other usual residents of the household. They may live within a family household, or they may form a non-family household either as a

lone person or a group household.

Occupation Classified according to the Australian and New Zealand Standard Classification of

OCCUPATIONS (ANZSCO) 2006 (cat. no. 1220.0)

Other family person An individual who is related to at least one other member of the household, but who

does not form an identified couple relationship or parent-child relationship according to the priority rules of family coding. He/she can be related through blood, step or in-law relationship and include any direct ancestor or descendant. Relatives beyond first cousin

are excluded.

Overtime Work undertaken which is outside, or in addition to, ordinary working hours of the

respondent, whether paid or unpaid.

Paid overtime Hours worked in excess of award, standard or agreed hours of work. Workers are

specially paid for these hours at either standard or penalty rates.

Person living alone Anyone at least 15 years of age living in a private dwelling in which they are the only

usual resident.

Reference Period The period of time for which the data are collected and/or compiled. In this survey, the

reference period refers to the first two weeks in October 2006.

GLOSSARY continued

Standard / award / contract Award, standard or agreed hours of work, paid for at the ordinary time rate.

hours

Time off in lieu Time off that must be made up in another work period or that has already been made up

by working extra hours.

Trade union An organisation consisting predominantly of employees, the principal activities of which

are the negotiation of rates of pay and conditions of employment for its members.

Unknown Industry and occupation of employment were not collected in this survey nor the

October 2006 labour force survey. However records from this supplementary survey were matched with the November 2006 labour force survey when questions regarding industry and occupation of employment were asked. Where there was no matching

November record, industry and occupation were coded as 'unknown'.

Unpaid hours Hours that an employee works in excess of his/her perception of what they should be

expected to work on a regular basis as a normal part of their job. They are not specifically paid for these hours, although they may receive an allowance in their salary package or

time off in lieu of these extra hours.

Usual hours Usual hours of work refers to a typical period rather than to a specified reference period.

Wage and salary earner Persons who worked for an employer for wages or salary. Multiple job holders were

included in this survey if they were a wage or salary earner in any of their jobs.
