MARCH QTR KEY FIGURES

	% change Dec Qtr 1999 to Mar Qtr 2000	% change Mar Qtr 1999 to Mar Qtr 2000
Weighted average of six State capital cities	0.9	1.0
Sydney	1.0	1.0
Melbourne	0.6	1.1
Brisbane	0.5	0.8
Adelaide	0.8	0.6
Perth	0.7	1.7
Hobart	0.7	0.6

MARCH QTR KEY POINTS

WEIGHTED AVERAGE INDEX

- The increase in the index was due to price increases for a wide range of materials. The main materials contributing to this increase were reinforcing steel bar, aluminium windows, built-in furniture, other precast concrete products, glass products, plastic pipes and fittings and clay bricks.
- These increases were partly offset by price decreases for ready mixed concrete.

CAPITAL CITIES INDEXES

- Prices for reinforcing steel bar increased in all cities except Adelaide and Hobart which showed decreases.
- Aluminium windows prices increased in all cities except Perth which recorded no change.
- Prices for built-in furniture increased in Sydney and Brisbane, fell in Hobart and showed no change in Melbourne, Adelaide and Perth.
- Other precast concrete products prices increased in all cities except Perth and Hobart which showed no change.
- Prices for glass products increased in all cities except Melbourne which remained unchanged.
- Plastic pipes and fittings prices increased in all cities.
- Prices for clay bricks rose in all cities except Perth which recorded a price decrease.
- Ready mixed concrete prices decreased in all cities except Adelaide which showed an increase.

- For further information about these and related statistics, contact Robert Adams on Canberra 02 6252 6198, or the National Information Service on 1300 135 070.

(a) Base of each index: 1989-90 = 100.0

EXPLANATORY NOTES

- INTRODUCTION **1** This publication presents index numbers measuring changes in prices of selected materials used in the construction of buildings other than houses—the *Price Index of Materials Used in Building Other than House Building*. It is calculated on the reference base 1989–90 = 100.0 for the six State capital cities.
- SCOPE **2** The index includes 63 items which are combined into 10 industry of origin groups and an ‘All groups’ total. Table 1 presents ‘All groups’ index numbers for the weighted average of the six State capital cities, for each of the cities separately. Although many of the selected materials are also used in house building, in building repair, maintenance and alteration work and in engineering construction work (e.g. projects such as roads, dams, bridges and the like), the weighting pattern of the index is not applicable to these other activities of the construction industry. In addition, since the weights are based on an average materials usage over a range of types of building within the defined area (building other than house building), the index is not necessarily applicable to any specific building or type of building.
- CLASSIFICATION **3** For the weighted average of the six State capital cities the selected materials have been combined into broad groups on an industry of origin basis. Table 4 presents index numbers for groups defined in terms of the Groups (3 digit level) of the 1993 *Australian and New Zealand Standard Industrial Classification* (ANZSIC); the percentage contributions for individual materials and groups are shown in table A1 of the Appendix of the October 1993 issue of this publication. The ‘industry of origin’ is not necessarily identical to the industry which supplies the materials to builders. The ‘industry of origin’ is the industry in which the material is *primarily produced*, determined in accordance with the classification rules of the ANZSIC. For instance, many of the materials are classified to the appropriate producing industries, rather than the wholesale trading industries. Some materials used in constructing buildings in Australia are imported. Imported materials are allocated to the similar industry of origin as Australian produced materials.
- ITEMS AND WEIGHTS **4** The index is a fixed weights index. The items were selected and allocated weights in accordance with the estimated average values of materials used in the construction of buildings other than houses completed in each of the seven capital cities in the five years ended June 1992. This same weighting pattern is used for each of the six capital cities. The weighting pattern for the ‘All groups’ index is set out in Appendix A of the October 1993 issue of this publication.
- PRICE MEASUREMENT **5** Prices relate to specific standards of each material and are obtained from representative suppliers of materials used in building. In general, the point of pricing is ‘delivered on site’ but in some cases it has been necessary to use the nearest realistic price available e.g. ‘delivered to electrical contractor’s store’. Local prices are used in the indexes for each capital city.
- 6** As far as possible, actual transactions prices are used in this index—that is, prices actually paid by building contractors or subcontractors to suppliers for materials delivered on building sites. The actual price paid for anything can be described in various ways. Instead of being described as a single price (as usually happens in retail shops) a price for a building material may be described in terms of the components which make up the price—for instance ‘list price plus sales tax’, ‘suppliers price plus freight’, ‘basic price less (particular types of) discount’ and so on. It is these *net* prices that buyers pay to sellers for materials that the ABS aims to use in compiling this index.

EXPLANATORY NOTES

PRICE MEASUREMENT *continued*

7 The ABS asks respondent businesses to report details of the discounts they offer so that actual transaction prices can be calculated. However, as building material suppliers offer many different types of discounts to buyers (e.g. trade discounts, settlement discounts, quantity discounts, competitive discounts), the identification of the discounts and the way in which they are applied by sellers pose considerable problems for the ABS. To the extent that discounts are identified and measured, their effects are taken into account in calculating the index. Sometimes new discounts, or changes in the way discounts are applied by sellers, are identified only after index numbers for a particular period have been published. In such cases, or in any other case where it is discovered that incorrect prices have been used in compiling the indexes, revisions to index numbers may occur in subsequent issues of this publication.

8 To minimise the incidence of revisions, the ABS has stringent procedures to verify that prices reported in its mail collections are transactions prices net of discounts.

9 Sales taxes levied on building materials are included in the prices used to compile the index. Materials used in the construction of Commonwealth, State and Local Government owned buildings are exempt from sales tax; materials used in most non-government 'health' and 'education' buildings and buildings for non-profit organisations such as religious and charitable institutions are also exempt. At any particular time, when there is a change in the rate of sales tax on building materials, the movement in the index takes into account the proportion of materials sold subject to sales tax and the proportion of materials exempt from sales tax.

10 On request, the ABS can provide further information on the treatment of sales tax in the index including details of factors to either include the full effects of sales tax changes or exclude entirely the effects of sales tax changes.

INDEX NUMBERS

11 Index numbers for financial years are averages of quarterly index numbers.

SELECTED MATERIALS

12 Table 5 contains index numbers for selected materials used in constructing buildings other than houses for the weighted average of the six State capital cities. In general these indexes relate to either single items or combinations of items as shown in the weighting pattern published in table A1 of the Appendix to the October 1993 issue of this publication. Tables 6 to 9 contain index numbers for selected major materials for each State capital city.

SPECIAL COMBINATIONS OF MATERIALS

13 Tables 10 to 12 contain index numbers for the following special combinations of materials, for the weighted average of the six State capital cities and each State capital city:

- All groups excluding electrical materials and mechanical service components
- Electrical materials
- Mechanical services components
- Plumbing materials

REVISIONS

14 In cases where more complete information is obtained after index numbers for a period have been published, or it is discovered that incorrect prices have been used in compiling the indexes, revisions to index numbers may occur in subsequent issues of this publication.

ANALYSIS OF INDEX CHANGES

15 Care should be exercised when interpreting quarter-to-quarter movements in the indexes as short-term movements do not necessarily indicate changes in trend.

16 The separate city indexes measure price movements over time in each capital city individually. They do not measure differences in price levels between cities.

EXPLANATORY NOTES

ANALYSIS OF INDEX CHANGES

continued

17 Movements in indexes from one period to another can be expressed either as changes in 'index points' or as percentage changes. The following example illustrates the method of calculating index points changes and percentage changes between any two periods:

Weighted average of six State capital cities index numbers —	
March Quarter 2000	116.4 (see Table 1)
less March Quarter 1999	115.2 (see Table 1)
Change in index points	1.2
Percentage change	$\frac{1.2}{115.2} \times 100 = 1.0$

18 Table 3 provides an analysis of the contribution which selected major building materials make to the All groups index for the weighted average of the six State capital cities. For example, Ready mixed concrete contributed 9.75 index points to the All groups index number of 116.4 for March Quarter 2000 and -0.13 index points to the net change of 1.0 index points.

FURTHER INFORMATION

19 Further information on the index is presented in the publication *Producer and Foreign Trade Price Indexes: Concepts, Sources and Methods* (Cat. no. 6419.0).

RELATED PUBLICATIONS

20 Users may also wish to refer to the following price index publications which are available from ABS Bookshops:

- *Price Index of Materials Used in House Building, Six State Capital Cities* (Cat. no. 6408.0)
- *Price Indexes of Materials Used in Manufacturing Industries, Australia* (Cat. no. 6411.0)
- *Price Indexes of Articles Produced by Manufacturing Industry, Australia* (Cat. no. 6412.0)
- *Price Indexes of Copper Materials, Australia* (Cat. no. 6410.0).

21 Other ABS publications that may be of interest include:

- *Average Weekly Earnings, States and Australia* (Cat. no. 6302.0).

UNPUBLISHED STATISTICS

22 Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (Cat. no. 1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (Cat. no. 1105.0) which lists publications to be released in the next few days. The Catalogue and Release Advice are available from any ABS office.

23 As well as the statistics included in this and related publications, the ABS may have other relevant unpublished data available. Inquiries should be made to Robert Adams on 02 6252 6198 or to any ABS office.
