ABOUT THIS PUBLICATION

This publication, prepared by the Australian Bureau of Statistics on behalf of the Forest Products Commission Western Australia and the Forest Industries Federation (WA) Inc, presents index numbers measuring changes in prices of Western Australian sawn hardwood timber.

The Price Index of Western Australian Produced Hardwoods (WAPHI) measures the change in prices of Western Australian sawn hardwoods. Individual price indexes are also published for each of the major hardwood timbers produced and sold by the Western Australian timber industry, namely:

- Green jarrah
- Green karri
- Dry jarrah

SUMMARY OF FINDINGS

KEY FIGURES

PRICE INDEX NUMBERS

	Sept qtr 01	Dec qtr 01	Sept qtr 01 to Dec qtr 01
	Index number	Index number	% change
WA Produced Hardwoods	119.1	119.4	0.2
Green Jarrah	114.6	114.1	-0.4
Green Karri	110.1	109.8	-0.3
Dry Jarrah	128.0	129.3	1.0

PRICE INDEXES

PRICE INDEX OF WESTERN AUSTRALIAN PRODUCED HARDWOODS

The Western Australian Produced Hardwoods Index (WAPHI) increased by 0.2% between the September quarter 2001 and December quarter 2001 and follows a decrease of 0.5% for the previous quarter. For the year ending December quarter 2001, the index decreased by 0.5%.

Price index of WAPHI

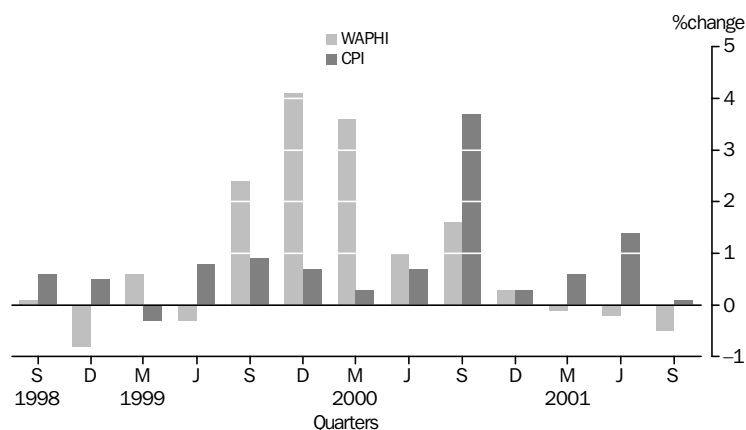

SUMMARY OF FINDINGS *continued*

The Consumer Price Index (CPI) is commonly used as a general indicator of inflation/deflation. The WAPHI, covering prices of selected timber items only, does not always display the same trends as the CPI. By way of example, the CPI for Perth, All Groups, increased 1.4% for the June quarter 2001 while the WAPHI decreased 0.2%. However, for the December quarter 2000, both indexes increased by 0.3%.

The graph below shows a comparison between the quarterly percentage changes for the CPI, All Groups, for Perth and the WAPHI since September quarter 1998. A major contributor to the different trends displayed in the September quarter 2000 was the treatment of The New Tax System in each of the indexes (eg in the WAPHI, prices used in compiling the index were exclusive of GST, whereas prices in the CPI included the GST).

Comparison of WAPHI with CPI

PRICE INDEXES OF GREEN JARRAH AND GREEN KARRI

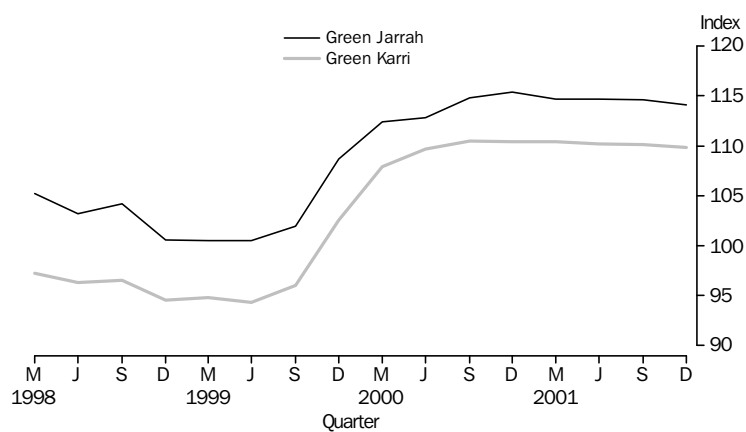

From the September quarter 2001 to the December quarter 2001, both the green karri and green jarrah indexes decreased by 0.3% and 0.4% respectively. Over the twelve months ended December quarter 2001, the indexes for green jarrah and green karri have decreased by 1.1% and 0.5% respectively. Major uses for green hardwoods are roofing frames, railway sleepers and crossing timber.

SUMMARY OF FINDINGS *continued*

Generally, suppliers revise the prices of jarrah and karri to the local market at the same time, usually applying a uniform percentage price change to the same size, length and stress grade of hardwood timber, irrespective of variety. Prices for interstate sales and exports of green jarrah and green karri, however, are sometimes independently determined and this can affect the price movements of the two species in the index.

Below is a graph comparing green jarrah and karri price movements since March quarter 1998.

Comparison of green jarrah and green karri price movements

PRICE INDEX OF DRY JARRAH

The index for dry jarrah increased by 1.0% between September quarter 2001 and December quarter 2001 following a decrease of 0.8% the previous quarter. In the twelve months to December quarter 2001, prices have increased 0.1%.

PRICE INDEX OF DRY KARRI

An index of dry karri is compiled by the ABS and the price movements are included in the compilation of the Price Index of Western Australian Produced Hardwoods. However, because of the limited number of producers and the small volumes sold, the ABS does not release the index numbers.

(a) Base Index 1992-93 = 100.0

EXPLANATORY NOTES

INTRODUCTION

1 This publication presents index numbers measuring changes in prices for sawn timber produced from Western Australian produced hardwoods. They are calculated on the reference base 1992–93 = 100.0

SCOPE

2 The scope of the index is Western Australian produced sawn hardwood timber sold by Western Australian mills and merchants within Western Australia, interstate and overseas. Timber used for veneer, woodchips, particle board and posts and poles is not included.

ITEMS AND WEIGHTS

3 The indexes are fixed weight indexes. For the period prior to March quarter 1997, the items included in the index were selected and allocated value weights on the basis of sawn timber sold during 1992–93 to final users in Western Australia and merchants interstate and overseas. From March quarter 1997, the items included in the index and their value weights were based on sawn timber sold during 1995–96 valued at December 1996 prices.

4 Many of the selected items carry not only the weight of directly priced timbers, but also the weight of other timbers whose prices are considered to move similarly to those of the directly priced timbers.

COMPOSITION AND WEIGHTING IN REFERENCE YEAR 1995–96

<i>Item</i>	<i>Contribution</i>	
		<i>%</i>
Green jarrah		27
Green karri		27
Dry jarrah		44
Dry karri		2
Total		100

PRICE MEASUREMENT

5 Most prices used in these indexes related to the mid-point of each month of the quarter up until the June quarter 1997. From the September quarter 1997 prices relate to the mid-point of the quarter. Prices are obtained from a representative sample of sawmills and timber merchants (including exporters). The point of pricing is the last sale before final use; handling and delivery costs are included for local sales, if incorporated in the merchant's or sawmill's price. For example, the price of timber sold to builders is the delivered on site price. Interstate sales are normally priced ex-mill and for exports, the price is generally free on board (fob).

6 As far as possible, actual transaction prices are used in the indexes and exclude the GST introduced in Australia from 1 July 2000. These are the prices *actually* received by sawmills and merchants from builders, joinery workshops, furniture manufacturers and other purchasers of the timber. The actual price paid can be described in various ways. For example, a price for a sawmill's or merchant's product may be described in terms of the components that make up the price, such as 'list price less (particular types of) discount'. It is these *net* prices that buyers pay to sellers that the ABS aims to use in compiling these price indexes.

EXPLANATORY NOTES *continued*

7 Price series relate to goods of fixed specifications with the aim of incorporating in the index, price changes for representative articles of constant quality (eg. size, dimensions, stress grade). Consistent with this approach, prices in general relate to a standard representative set of transactions (in terms of quantity, delivery arrangements, destination, etc.) in order to avoid variations in price that are attributable solely to a changing mix of transactions over time.

INDEX NUMBERS

8 The index numbers for financial years are simple averages of the relevant quarterly index numbers.

REVISIONS

9 Index numbers for the current quarter and the previous quarter are preliminary and subject to revision. From time to time, index numbers for earlier periods may also be revised. This will occur whenever the ABS obtains more complete information or discovers that incorrect prices have been used.

ANALYSIS OF INDEX CHANGE

10 Care should be exercised when interpreting quarter-to-quarter movements in the indexes as short term movements do not necessarily indicate changes in trend.

11 Movements in indexes from one period to another can be expressed either as changes in 'index points' or as percentage changes. The following example illustrates the method of calculating index points changes and percentage changes between any two periods.

DRY
JARRAH

September quarter 2001	128.0
<i>minus</i> June quarter 2001	<u>129.0</u>
<i>equals</i> Change in index points	-1.0

Change in index points x 100	<u>-1.0 x 100</u>
<i>divided by</i> June quarter 2001	129.0
<i>equals</i> Percentage change	-0.8
