Manufacturing division	4.8	16.4
Imported materials Domestic materials	5.5 4.5	13.0 19.0

JUNE QTR KEY POINTS

MANUFACTURING DIVISION

• Crude oil price rises and the falling value of the Australian dollar were the main reasons for the increase in the index during the June quarter.

MAJOR MOVEMENTS

- Crude oil prices continued to rise world-wide.
- Prices for synthetic resins and plastic materials increased.
- Beef cattle prices rose.

 For further information about these and related statistics, contact Peter Sturgeon on Canberra
 02 6252 5348, or the National Information Service on
 1300 135 070.

8 ABS • MATERIALS USED IN MANUFACTURING INDUSTRIES • 6411.0 • JUNE QUARTER 2000

1 This publication presents index numbers that are based on materials used by establishments classified to designated 'sectors' of Australian manufacturing industry—the <i>Price Indexes of Materials Used in Manufacturing Industries (MUMI)</i> . They are calculated on the reference base 1989–90 = 100.0.
2 The indexes are on a 'net sector' basis; that is, each relates only to those materials which are used in the defined 'sector' of Australian manufacturing industry and which have been produced by establishments outside that 'sector'. These establishments are either Australian manufacturing establishments classified to other manufacturing 'sectors' or to other divisions of Australian industry (e.g. 'Agriculture, Forestry and Fishing' or 'Mining') or are overseas producers (including overseas manufacturing establishments).
3 The Manufacturing Division index measures changes in the prices of materials used by establishments classified to Australian and New Zealand Standard Industrial Classification (ANZSIC) Division C, Manufacturing, which have been purchased or transferred in from establishments outside the Manufacturing Division. It excludes semi–processed materials which have been produced by establishments within the Manufacturing Division and sold or transferred to other establishments within the Manufacturing Division. The index reflects purchases of materials at the point of entry to the Manufacturing Division.
4 The indexes for ANZSIC Subdivisions and Groups measure changes in prices of materials used by establishments classified to each defined ANZSIC manufacturing 'sector' which have been purchased or transferred in from establishments outside that 'sector'. These exclude semi–processed materials which have been produced by establishments within the specific 'sector' and sold or transferred to establishments in the same 'sector'. The pricing and weights for these net 'sector' indexes therefore reflect purchases and transfers in at the point of entry to the respective ANZSIC Subdivision or Groups .
5 The coverage of the ANZSIC Subdivision and Group price indexes shown in table 4 of this publication is as follows:
Food, beverages and tobacco—ANZSIC Subdivision 21 Food, Beverage and Tobacco Manufacturing;
 Textiles and textile products—ANZSIC Group 221 Textile, Fibre, Yarn and Woven Fabric Manufacturing and Group 222 Textile Product Manufacturing; Knitting mills and clothing—ANZSIC Group 223 Knitting Mills and Group 224 Clothing Manufacturing; Footwear—ANZSIC Group 225 Footwear Manufacturing; Leather and leather products—ANZSIC Group 226 Leather and Leather Product Manufacturing; Sawmilling and timber products—ANZSIC Group 231 Log Sawmilling and Timber Dressing and Group 232 Other Wood Product Manufacturing; Paper and paper products—ANZSIC Group 233 Paper and Paper Product Manufacturing; Printing and publishing—ANZSIC Subdivision 24 Printing, Publishing and Recorded Media;

.....

.

CLASSIFICATION continued	 Petroleum and coal products—ANZSIC Group 251 Petroleum Refining and Group 252 Petroleum and Coal Product Manufacturing n.e.c.; Chemicals—ANZSIC Group 253 Basic Chemical Manufacturing and Group 254 Other Chemical Product Manufacturing; Rubber and plastics—ANZSIC Group 255 Rubber Product Manufacturing and Group 256 Plastic Product Manufacturing; Non—metallic mineral products—ANZSIC Subdivision 26 Non–Metallic Mineral Product Manufacturing; Basic metal products—ANZSIC Group 271 Iron and Steel Manufacturing; Group 272 Basic Non–Ferrous Metal Manufacturing and Group 273 Non–Ferrous Basic Metal Product Manufacturing; Fabricated metal products—ANZSIC Group 274 Structural Metal Product Manufacturing; Group 275 Sheet Metal Product Manufacturing and Group 276 Fabricated Metal Product Manufacturing; Transport equipment and parts—ANZSIC Group 281 Motor Vehicle and Part Manufacturing and Group 282 Other Transport Equipment Manufacturing; Electronic equipment and other machinery—ANZSIC Group 283 Photographic and Scientific Equipment Manufacturing; Group 285 Electrical Equipment and Appliance Manufacturing and Group 286 Industrial Machinery and Equipment Manufacturing; Other manufacturing—ANZSIC Subdivision 29 Other Manufacturing.
ITEMS AND WEIGHTS	 6 The indexes are fixed weights indexes. The items included in the indexes were selected on the basis of the values of materials used in 1989–90. The selected items were allocated weights in accordance with the estimated value of manufacturing usage. 7 Many of the selected items carry not only the weight of directly priced materials but also the weight of unpriced materials whose prices are considered to move similarly to
	those of directly priced materials. 8 Materials have been grouped on the basis of ANZSIC industry of origin (i.e. the industry in which, in accordance with the classification rules of ANZSIC, the materials are primarily produced in Australia or the industry in which the materials would be classified had the materials been produced in Australia). Percentage contributions, in 1989–90, of individual materials to the Manufacturing Division as a whole and to the ANZSIC Subdivision and Group indexes are shown in Appendix A of the July 1996 issue of this publication.
PRICE MEASUREMENT	9 Prices of these materials are generally obtained from suppliers (producers and wholesalers). Prices of imported materials are generally obtained from importers and relate to shipments arriving in Australia in the quarter.
	10 In concept, pricing for these indexes is at the point at which the material physically enters the defined manufacturing 'sector'. Therefore, as far as possible prices are on a 'delivered into store' basis. For the manufacturing industry, both intermediate and capital inputs directly used in the manufacturing processes are exempt of wholesale sales tax.

.....

.

PRICE MEASUREMENT continued	11 Transfers which do not take place on the open market present problems for the measurement of price change. An example is where a vertically integrated enterprise extracts a mineral (mining activity) and also processes it (manufacturing activity). Since material is transferred from one part of the enterprise to another there is usually no transaction price. In such instances, various methods of imputing changes in market prices have been adopted. Depending on circumstances and the availability of data, these methods include using changes in opportunity cost (based, for example, on the price of the material in an established market) or changes in the cost (based on expenses actually incurred in obtaining the material). Imputations of this kind, for example, enter partly into price series for ores used in the manufacture of metal concentrates.				
	12 In the case of some seasonal madeliveries do not occur over the who for the quarters outside the selling stoperative.	ole year, the previous	season's prices are repeated		
	13 For some items, where prices ar sometimes not known until the releve partly completed. Estimates of the cuindex calculations until the final price.	vant season or contra urrent season or cont	ct period has been at least		
INDEX NUMBERS	14 Index numbers for financial years are simple averages of quarterly index numbers.				
REVISIONS	15 In cases where more complete i period have been published, or it is compiling the indexes, revisions to it this publication.	discovered that incor	rect prices have been used in		
ANALYSIS OF INDEX CHANGES	16 Care should be taken when interpreting quarter–to–quarter movements in the indexes as short–term movements do not necessarily indicate changes in trend.				
	17 Movements in indexes from one period to another can be expressed as either changes in 'index points' or as percentage changes. The following example illustrates the method of calculating index points changes and percentage changes between any two periods:				
	Manufacturing Division index n	umbers —			
	June Quarter 2000 June Quarter 1999 Change in index points Percentage change	123.5 106.1 17.4 17.4 106.1 x 100	(see Table 1) (see Table 1) 0 = 16.4		
	18 Table 3 provides an analysis of t industry of origin) make to the total sheep and beef cattle farming contri Manufacturing division index number points to the net change of 4.8 index	Manufacturing Divisi buted 16.54 index po er of 123.5 for June Q	on index. For example, Grain pints to the total
