## ALL GROUPS INDEX

- The appreciation of the Australian dollar against most other currencies, along with lower prices for petroleum products contributed to the fall in the index in the March quarter.

## MAJOR MOVEMENTS

- Prices for crude petroleum and related products decreased.
- Office and ADP equipment prices continued to fall.
- The combined effect of small price decreases for a wide range of goods including chemicals and equipment also had a downward influence on the All Groups index number.
- Your attention is drawn to the Note on page 2.
- For further information about these and related statistics, contact Peter Sturgeon on Canberra 026252 5348, or any ABS office shown on the back cover of this publication.

## N O T E S

FORTHCOMING ISSUES

PLEASE NOTE

| ISSUE (Quarter) | RELEASE DATE |
| :--- | :--- |
| June 1999 | 23 July 1999 |
| September 1999 | 22 October 1999 |

- The ABS has commenced work on the latest periodic review of the international trade price indexes - the Import Price Index and the Export Price Index (ABS Catalogue No. 6405.0). While an important objective of the review is to update item weights, it also provides an opportunity to reassess more fundamental issues such as the principal purpose of the indexes, scope and coverage. As part of this review a discussion paper will be distributed outlining these issues and possible implications for the indexes and will invite user input to the review.
- The ABS will provide preliminary estimates of movements in the March quarter chain price index for merchandise goods imports and goods import volumes in the March issue of International Trade in Goods and Services (ABS Catalogue No. 5368.0), due for release on 3 May 1999. These estimates will be derived using price information both contained in this publication and obtained from other sources.

T. J. Skinner Acting Australian Statistician

## EXPLANATORYNOTES

INTRODUCTION

SCOPE

1 This publication presents index numbers measuring changes in the prices of imports of merchandise landed in Australia-the Import Price Index. It is calculated on a reference base of $1989-90=100.0$.

2 The Import Price Index, either directly or indirectly, covers about 95\% of merchandise imported during 1988-89 and 1989-90.

3 The remaining imports are not represented because of the inherent difficulties in pricing the items to a constant quality. These unrepresented items include:

- live animals (not for food)
- jewellery and other articles of precious metal n.e.s.
- military equipment
- special transactions
- commodities not classified according to kind
- works of art, collectors' pieces, antiques
- ships of various types.

4 The index numbers for each quarter relate to prices of those imports of merchandise that are physically landed in Australia during that quarter.

5 Index numbers for sections and selected divisions of the Standard International Trade Classification (SITC), Revision 3 are provided in tables 3 and 4, while index numbers for selected sections of the Combined Australian Customs Tariff and Statistical Nomenclature (ATSN) are provided in table 5.

6 Tables 6 and 7 contain index numbers for selected Divisions and Subdivisions, on an 'industry of origin' basis, of the Australian and New Zealand Standard Industrial Classification (ANZSIC). The 'industry of origin' is the industry in which the imported commodity would be classified as primarily produced had it been produced in Australia, determined in accordance with the classification rules of the ANZSIC.

7 Table 8 contains index numbers for categories of the United Nations' Classification by Broad Economic Categories (BEC). Table 9 contains index numbers for these categories rearranged to form the broader end use classes: Capital goods, Intermediate goods and Consumption goods. Each category has been allocated wholly to one of these classes except for:

- category 321, Motor spirit (which has been allocated in part to Intermediate goods and in part to Consumption goods)
- category 51, Passenger motor cars (which has been allocated in part to Capital goods and in part to Consumption goods).

8 The index is a fixed weights index. The commodities directly represented in the index (the index items), were selected on the basis of their import values during 1988-89 and 1989-90. They constituted approximately $95 \%$ of the total value of imports of merchandise to Australia during these years. The selected items were allocated weights in accordance with the average value of imports for each item during 1988-89 and 1989-90. These weights were then revalued to reflect 1989-90 price levels. Many of the items carry not only their own weight but also the weight of unpriced commodities whose prices are considered to move in a similar manner. The weighting pattern of the Import Price Index, i.e. the percentage contributions for index items and groups, was shown in the September 1991 issue of this publication.

## EXPLANATORY NOTES

## REVISIONS

9 Prices of individual shipments are obtained from importers of the selected items and relate to the quarter in which the goods arrive in Australia. Imports are priced on a 'free on board' (f.o.b.), country of origin basis. Freight and insurance charges involved in shipping goods from foreign to Australian ports are therefore excluded from the prices used in the index, as are Australian import duties.

10 As the prices used in the index are expressed in Australian currency, changes in the relative value of the Australian dollar and overseas currencies can have a direct impact on price movements for the many commodities that are bought in currencies other than Australian dollars. Prices reported in a foreign currency are converted to Australian dollars using the relevant exchange rates. Where imports are purchased at prices expressed in terms of a foreign currency and forward exchange cover is used, the prices in the index exclude the forward exchange cover.

11 The price series used relate to specified standards, grades, types, etc. of each commodity. The aim is to incorporate in the index price changes for imports of representative goods of constant quality. Wherever possible, prices from predominant countries of origin are used for each of the specified goods priced in order to lessen the impact of price variations attributable solely to changes, over time, in the mix of countries of origin. In most cases prices are combined using fixed weights between markets. Weights between countries are reviewed from time to time and revised where necessary.

12 Index numbers for financial years are simple averages of quarterly index numbers.

13 In cases where more complete information is obtained after index numbers for a period have been published, or it is discovered that incorrect prices have been used in compiling the indexes, revisions to index numbers may occur in subsequent issues of this publication.

14 Care should be exercised when interpreting quarter-to-quarter movements in the indexes as short-term movements do not necessarily indicate changes in trend.

15 Movements in indexes from one period to another can be expressed either as changes in 'index points' or as percentage changes. The following example illustrates the method of calculating index points changes and percentage changes between any two periods:

All groups index numbers -

| March Quarter 1999 | 119.1 (see Table 1) |
| :--- | :---: |
| less March Quarter 1998 | 116.7 (see Table 1) |
| Change in index points | 2.4 |
| Percentage change $=$ | $\frac{2.4}{116.7} \times 100=2.1$ |

16 Table 2 provides an analysis of the contribution which selected categories of imports make to the All groups index. For example, Road vehicles contributed 16.24 index points to the All groups index number of 119.1 for March Quarter 1999 and -0.04 index points to the net change of -2.6 index points.

## EXPLANATORYNOTES

| FURTHER INFORMATION | 17 The September 1991 issue of this publication contains a more detailed description of the index. A detailed description of the previous Import Price Index is contained in the December Quarter 1982 issue of this publication. <br> 18 Further information on the index is presented in the publication Producer and Foreign Trade Price Indexes: Concepts, Sources and Methods (Cat. no. 6419.0). |
