

Dear Subscriber

Contained in this package is the first release of the ABS publication: *International Trade Price Indexes, Australia* (Cat. no. 6457.0) for the June quarter 2001. This replaces the previous publications: *Export Price Index, Australia* (Cat. no. 6405.0); and *Import Price Index, Australia* (Cat. no. 6414.0).

This new publication contains the key series from the previous publications, and includes new tables on a balance of payments classification basis. Some tables from the former publications are not included in the new publication. However, these are contained in the attached publication supplement. To locate the tables you require, please see the attached concordance which lists where all tables from the previous publications can be found in either the new publication or supplement.

Commencing with the release of the December quarter 2001 publication in January 2002, it is expected that adhoc and regular access to ABS electronic products will be available via the ABS Website <www.abs.gov.au> at low cost. Users will then be expected to access from this new Internet based service, any tables no longer published which they still require. Information on accessing this service and the costs involved will be provided to 2001 subscribers with their September quarter 2001 issue of *International Trade Price Indexes*, *Australia* (Cat. no. 6457.0).

A special telephone service has been set up to assist users with this transition. If you have any queries or requests for data, please contact Lee Taylor on 1800 155 106.

Miscellanous manufactured articles	1.6	3.9

JUNE KEY POINTS

IMPORT PRICE INDEX

A decline in the value of the Australian dollar against the major currencies, particularly the US dollar, in the June quarter resulted in price rises for a range of items. World price rises for inorganic chemicals, crude oil (affecting the prices of petroleum and related products) and, to a lesser extent motor vehicles and parts, were also major contributors to the 4.4% increase in the import price index for the June quarter.

EXPORT PRICE INDEX

■ A large increase in the price of coal, due to the signing of new contracts during the June quarter primarily for the Japanese market, and higher world prices for beef, crude oil, wool and iron ore were the main contributors to the 4.3% increase in the export price index for the June quarter. The decline in the value of the Australian dollar in the June quarter also had a slight upward impact on Australian export prices in general.

NOTES

FORTHCOMING ISSUES ISSUE (Quarter)

September 2001 19 October 2001 December 2001 18 January 2002

RELEASE DATE

NEW ISSUE

This is the first issue of this quarterly publication, which replaces the *Export Price Index*, *Australia* (Cat no. 6405.0) and *Import Price Index*, *Australia* (Cat no. 6414.0) publications. Classifications for the import and export price indexes have been standardised, and tables for both indexes are also presented using ABS balance of payments classifications. Not all tables from the previous catalogues are produced in this issue; however they are available on AusStats or can be obtained by contacting the National Information Service on 1300 135 070. A concordance between tables in the old and new publications is also available with these services.

For other enquiries specifically related to this new publication and those it has replaced, please contact Glyn Prichard on 1800 155 106.

RELATED STATISTICS

For more information about statistics in this publication and about other 'ABS data available on request', contact Glyn Prichard on (02) 6252 6257, or email <glyn.prichard@abs.gov.au>.

⁽a) Reference base of each index: 1989-90 = 100.0.

EXPLANATORY NOTES

INTRODUCTION

SCOPE

- **1** This publication contains indexes measuring changes in the prices of imports of merchandise that are landed in Australia each quarter—the import price index (tables 1–6), and exports of merchandise that are shipped from Australia each quarter—the export price index (tables 7–11).
- **2** The indexes are calculated on the reference base 1989-90 = 100.0.
- **3** The import price index excludes the following items (representing approximately 5% of the value of merchandise imported during the weighting period) because of the inherent difficulties in pricing the items to constant quality (see paragraph 15 below):
 - live animals (not for food)
- jewellery and other articles of precious metal n.e.s.
- military equipment
- commodities not classified according to kind
- works of art, collectors' pieces, antiques
- ships of various types.
- **4** The export price index includes re-exports of merchandise (i.e. goods which are imported into Australia and exported at a later date without physical transformation).

CLASSIFICATIONS

- **5** Index numbers for selected sections of the Standard International Trade Classification (SITC) are provided in table 3 (import price index) and table 9 (export price index).
- **6** The import price index is also presented by End Use Class of the United Nations' Classification by Broad Economic Categories (BEC) in tables 4–6. These have been disaggregated into balance of payments groupings.
- **7** The export price index is also presented by balance of payments export groupings in tables 10 and 11.

ITEMS AND WEIGHTS

- **8** The import price index and export price index are annually reweighted chained Laspeyres indexes. This method of weighting was introduced in the September quarter 2000 and replaces the "fixed-base" method of weighting in which the weighting patterns are updated infrequently (generally once every 5 or 10 years).
- 9 The annual reweighting and chaining process involves a number of steps in order to provide new weights each year. The current weighting basis for the import price index was derived from the average value of import items during 1999–2000. This differs slightly from the export price index which has used the average value of export items during 1998-99 and 1999-2000, due to the greater volatility associated with the value of export items. These weights were then revalued to reflect link period (June quarter 2000) price levels. Indexes derived by using the new weights for the September quarter 2000 were then linked to the already published June quarter 2000 (link period) levels which were derived using the previous series weights. Using this chain linking methodology, long-term chain linked series can be constructed over time on a consistent reference base for continuity and user convenience, but using annually refreshed weights. The reference base for each index series continues to be 1989-90 = 100even though the weights are being updated each year. The current series weighting patterns (in link period prices) are shown in the September 2000 issues of the former publications Import Price Index, Australia (Cat. no. 6414.0) and Export Price Index, Australia (Cat. no 6405.0).

EXPLANATORY NOTES continued

ITEMS AND WEIGHTS continued

10 The commodities directly represented in each index (the index items) were selected on the basis of the significance of their import and export values in the weighting period (i.e. 1999–2000 for imports, 1998–1999 and 1999–2000 for exports). All significant commodities were selected for pricing. The weights for minor commodities which are not directly priced are included with those of comparable directly priced items whose prices are likely to move in a similar way.

PRICE MEASUREMENT

- **11** In general, prices of individual shipments are obtained from major importers and exporters of the selected items and relate to the quarter in which the imported goods physically arrive in Australia and the exported goods physically leave Australia.
- **12** Imports are priced on a 'free on board' (f.o.b), country of origin basis. Freight and insurance charges involved in shipping goods from foreign to Australian ports are therefore excluded from the prices used in the index, as are Australian import duties and taxes. Similarly, exports are priced on a f.o.b basis at the main Australian ports of export. Exports are exempt from taxes on products.
- **13** As the prices used in the indexes are expressed in Australian currency, changes in the relative value of the Australian dollar and overseas currencies can have a direct impact on price movements for the many commodities that are bought and sold in currencies other than Australian dollars. Prices reported in a foreign currency are converted to Australian dollars using relevant exchange rates. Where imports or exports are transacted in prices expressed in terms of a foreign currency and forward exchange cover is used, the prices in the indexes exclude the forward exchange cover.
- 14 The main pricing methodology used is specification pricing, under which a manageable sample of precisely specified products is selected, in consultation with each reporting business, for repeat pricing. In specifying the products, care is taken to ensure that they are fully defined in terms of all the characteristics which influence their transaction prices. As such, all the relevant technical characteristics need to be described (e.g. make, model, features) along with the unit of sale, type of packaging, conditions of sale (e.g. delivered, payment within 30 days), etc. The goods are also specified by country and market in order to lessen the impact of price variations attributable solely to changes over time in the mix of countries, or markets.
- **15** When the quality or specifications of an item being priced change over time, adjustments are made to the reported prices so that the index captures only pure price change. That is, any element of price change attributable to a change in quality is removed. If there is an increase (decrease) in the quality of an item, then the price index is adjusted downwards (upwards) to reflect the 'worth' of the quality change. This technique is known as *pricing to constant quality*.
- **16** Wherever possible, prices from volume selling products being traded with predominant countries, or markets, are obtained to ensure specifications have a good chance of being re-priced over time and index series are representative of overall price movements. Individual product weights and weights between markets and countries are regularly reviewed to keep the indexes up to date.
- **17** Index numbers for financial years are simple averages of the relevant quarterly index numbers.

18 Care should be exercised when interpreting quarter-to-quarter movements in the indexes as short-term movements do not necessarily indicate changes in trend

INDEX NUMBERS

ANALYSIS OF INDEX CHANGES

ANALYSIS OF INDEX CHANGES continued

19 Movements in indexes from one period to another can be expressed either as changes in 'index points' or as percentage changes. The following example illustrates the method of calculating index points changes and percentage changes between any two periods:

Import price index, All groups index number:

June quarter 2001 138.7 (see table 1) less March quarter 2000 132.9 (see table 1)

Change in index points 5.8

Percentage change $5.8/132.9 \times 100 = 4.4$

20 Tables 2 and 8 provide analyses of the contribution which SITC sections and divisions make to the All groups import price index and export price index, respectively. For example, mineral fuels, etc. contributed 11.97 index points to the All groups import price index number of 138.7 for June quarter 2001 and 1.06 index points to the net change of 5.8 index points between March and June quarters 2001.

FURTHER INFORMATION

21 Further information on recent price index developments in the ABS is presented in the following publications:

An Analytical Framework for Price Indexes in Australia (Cat. no. 6421.0) Producer Price Index Developments (Cat. no. 6422.0)

Review of the Import Price Index and Export Price Index, Australia (Cat. no. 6424.0)

Price Indexes and The New Tax System (Cat. no. 6425.0)

RELATED PUBLICATIONS

22 Users may also wish to refer to the following related publications, which are available from ABS bookshops:

Producer Price Indexes, Australia (Cat. no. 6427.0)

Consumer Price Index, Australia (Cat. no. 6401.0)

Wage Cost Index, Australia (Cat. no. 6345.0)

Australian National Accounts, Input-Output Tables (Cat.no. 5209.0)

Balance of Payments and International Investment Position, Australia (Cat. no. 5302.0)

23 Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (Cat no. 1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (Cat no. 1105.0) which lists publications to be released in the next few days. The Catalogue and Release Advice are available from any ABS office.

ABS DATA AVAILABLE ON REQUEST

24 As well as the statistics included in this and related publications, the ABS has other international trade price index series (many at detailed commodity levels) which are available on request. Inquiries should be made to Glyn Prichard on 02 6252 6257.

NOTES

IMPORTANT NOTE

This document has been provided exclusively to 2001 subscribers of the former publications: *Export Price Index, Australia* (Cat. no. 6405.0) and *Import Price Index, Australia* (Cat. no. 6414.0); in conjunction with the new compendium publication, *International Trade Price Indexes, Australia* (Cat. no. 6457.0). It contains tables from these former publications which have not been included in the new publication, to ensure 2001 subscribers continue to receive all data previously published. This document is not intended for separate sale or distribution, and will be discontinued in 2002 when the tables contained within become available at low cost through accessing the ABS website <www.abs.gov.au>.

A special telephone service has been set up to assist users with this transition. If you have any queries or requests for data, please contact Lee Taylor on 1800 155 106.
