KEY POINTS

IMPORT PRICE INDEX

■ The Import Price Index fell by 4.1 % in the March quarter 2004 to its lowest level since June quarter 1997. The decrease was predominantly driven by the appreciation of the Australian dollar against most major currencies Falls were registered for prices of most commodities, with machinery and transport equipment, miscellaneous manufactured articles and petroleum and related products being the major contributors. There were no significant offsetting price increases.

EXPORT PRICE INDEX

■ The Export Price Index was unchanged in the March quarter 2004, following four consecutive quarters of negative movement. The nil movement this quarter is due to increases in a number of world commodity prices, offset by the appreciation of the Australian dollar against most major currencies. The main commodities registering price falls were coal, iron ores and petroleum gases. The most significant price increases were observed for alumina, pharmaceutical products and copper ores.

NOTES

FORTHCOMING ISSUES ISSUE (Quarter) RELEASE DATE

 June 2004
 23 July 2004

 September 2004
 22 October 2004

CHANGES IN THIS ISSUE The ABS has adopted a new methodology for imputing missing prices in the

International Trade Price Indexes. Rather than carrying forward the previously observed price (so that no movement is imputed), from March quarter 2004 missing prices are

imputed based on price movements of similar commodities.

ROUNDING Any discrepancies between totals and sums of components in this publication are due to

rounding.

⁽a) Reference base of each index: 1989-90 = 100.0.

EXPLANATORY NOTES

INTRODUCTION

- **1** This publication contains indexes measuring changes in the prices of imports of merchandise that are landed in Australia each quarter—the import price index (tables 1–6), and exports of merchandise that are shipped from Australia each quarter—the export price index (tables 7–11).
- **2** The indexes are calculated on the reference base 1989-90=100.0.

SCOPE

- **3** The import price index excludes the following items (representing approximately 5% of the value of merchandise imported during the weighting period) because of the inherent difficulties in pricing the items to constant quality (see paragraph 15 below):
 - live animals (not for food)
 - jewellery and other articles of precious metal n.e.s.
 - military equipment
 - commodities not classified according to kind
 - works of art, collectors' pieces, antiques
 - ships of various types.
- **4** The export price index includes re-exports of merchandise (i.e. goods which are imported into Australia and exported at a later date without physical transformation).

CLASSIFICATIONS

- **5** Index numbers for selected sections of the Standard International Trade Classification (SITC) are provided in table 3 (import price index) and table 9 (export price index).
- **6** The import price index is also presented by End Use Class of the United Nations' Classification by Broad Economic Categories (BEC) in tables 4–6. These have been disaggregated into balance of payments groupings.
- **7** The export price index is also presented by balance of payments export groupings in tables 10 and 11.

ITEMS AND WEIGHTS

- **8** The import price index and export price index are annually reweighted chained Laspeyres indexes. This method of weighting was introduced in the September quarter 2000 and replaces the "fixed-base" method of weighting in which the weighting patterns are updated infrequently (generally once every 5 or 10 years).
- 9 The annual reweighting and chaining process involves a number of steps in order to provide new weights each year. The current weighting basis for the import price index was derived from the average value of import items during 2002–03. This differs slightly from the export price index which has used the average value of export items during 2001–02 and 2002–03, due to the greater volatility associated with the value of export items. These weights were revalued to reflect link period (June quarter 2003) price levels. Indexes derived by using the new weights for the September quarter 2003 were then linked to the already published June quarter 2003 (link period) levels which were derived using the previous series weights. Using this methodology, long–term chain linked series can be constructed over time on a consistent reference base for continuity and user convenience, but using annually refreshed weights. The reference base for each index series continues to be 1989–90=100 even though the weights are being updated each year. The current series weighting patterns (in link period prices) are contained in the Appendix to this issue.
- 10 The commodities directly represented in each index (the index items) were selected on the basis of the significance of their import and export values in the period 1999–00 for imports and 1998–99 & 1999–00 for exports. All significant commodities were selected for pricing. The weights for minor commodities which are not directly priced are included with those of comparable directly priced items whose prices are likely to move in a similar way.

EXPLANATORY NOTES continued

PRICE MEASUREMENT

- **11** In general, prices of individual shipments are obtained from major importers and exporters of the selected items and relate to the quarter in which the imported goods physically arrive in Australia and the exported goods physically leave Australia.
- **12** Imports are priced on a 'free on board' (f.o.b), country of origin basis. Therefore freight and insurance charges involved in shipping goods from foreign to Australian ports are excluded from the prices used in the index, as are Australian import duties and taxes. Similarly, exports are priced on a f.o.b basis at the main Australian ports of export. Exports are exempt from taxes on products.
- 13 As the prices used in the indexes are expressed in Australian currency, changes in the relative value of the Australian dollar and overseas currencies can have a direct impact on price movements for the many commodities that are bought and sold in currencies other than Australian dollars. Prices reported in a foreign currency are converted to Australian dollars using relevant exchange rates. Where imports or exports are transacted in prices expressed in terms of a foreign currency and forward exchange cover is used, the prices in the indexes exclude the forward exchange cover.
- 14 The main pricing methodology used is specification pricing, under which a manageable sample of precisely specified products is selected, in consultation with each reporting business, for repeat pricing. In specifying the products, care is taken to ensure that they are fully defined in terms of all the characteristics which influence their transaction prices. As such, all the relevant technical characteristics need to be described (e.g. make, model, features) along with the unit of sale, type of packaging, conditions of sale (e.g. delivered, payment within 30 days), etc. The goods are also specified by country and market in order to lessen the impact of price variations attributable solely to changes over time in the mix of countries, or markets.
- **15** When the quality or specifications of an item being priced change over time, adjustments are made to the reported prices so that the index captures only pure price change. That is, any element of price change attributable to a change in quality is removed. If there is an increase (decrease) in the quality of an item, then the price index is adjusted downwards (upwards) to reflect the 'worth' of the quality change. This technique is known as pricing to constant quality.
- **16** Wherever possible, prices from volume selling products being traded with predominant countries, or markets, are obtained to ensure specifications have a good chance of being re-priced over time and index series are representative of overall price movements. Individual product weights and weights between markets and countries are regularly reviewed to keep the indexes up to date.
- **17** Index numbers for financial years are simple averages of the relevant quarterly index numbers.
- **18** Care should be exercised when interpreting quarter-to-quarter movements in the indexes as short-term movements do not necessarily indicate changes in trend.
- **19** Movements in indexes from one period to another can be expressed either as changes in 'index points' or as percentage changes. The following example illustrates the method of calculating index points changes and percentage changes between any two periods:

Import price index, All groups index number:

March quarter 2004 108.0 (see table 1) less March quarter 2003 126.4 (see table 1)

Change in index points -18.4

Percentage change $-18.4/126.4 \times 100 = -14.6$

INDEX NUMBERS

ANALYSIS OF INDEX CHANGES

EXPLANATORY NOTES continued

ANALYSIS OF INDEX CHANGES continued

20 Tables 2 and 8 provide analyses of the contribution which SITC sections and divisions make to the All groups import price index and export price index, respectively. For example, imports of mineral fuels, etc. contributed 8.93 index points to the All groups import price index number of 108.0 for March quarter 2004 and -0.44 index points to the net change of -4.6 index points between December 2003 and March 2004 quarters.

FURTHER INFORMATION

21 Further information on recent price index developments in the ABS is presented in the following publications:

An Analytical Framework for Price Indexes in Australia, cat. no. 6421.0 Producer Price Index Developments, cat. no. 6422.0 Review of the Import Price Index and Export Price Index, Australia, cat. no. 6424.0 Price Indexes and The New Tax System, cat. no. 6425.0
