## DECEMBER QTR KEY POINTS

### TREND ESTIMATES

- The trend estimate for the number of lambs slaughtered in December quarter 1999 was 4.2 million, slightly higher than the September quarter estimate. This was the highest quarterly figure since December quarter 1989.
- The trend estimate for the number of pigs slaughtered was 1.2 million in December quarter 1999, a fall of 2% on September quarter 1999. This was the fifth consecutive quarterly decrease.
- The trend estimate for chicken meat production rose 1% to a record level of 145,000 tonnes in December quarter 1999.

- For further information about these and related statistics, contact Nadine Cole on Hobart 03 6222 5939, or Client Services in any ABS office as shown on the back cover of this publication.

CHANGES IN THIS ISSUE There are no changes in this issue.

FORTHCOMING CHANGES There are no forthcoming changes.

Dennis Trewin  
Acting Australian Statistician

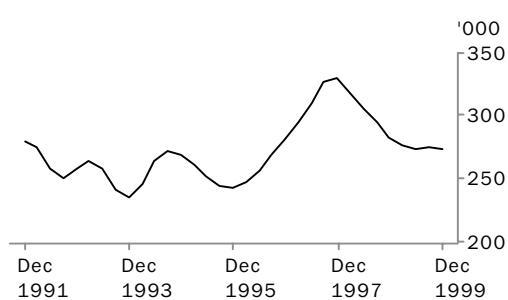

## LIVESTOCK SLAUGHTERED: Trend

CATTLE (EXCLUDING CALVES)

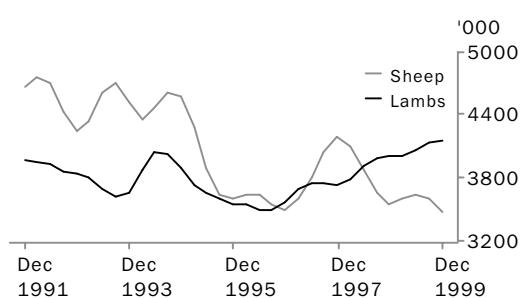

The trend estimate for cattle slaughterings remained steady in December quarter 1999 at 1.9 million. This reflects continued herd rebuilding activities which have kept beef supplies tight, especially for cows and heifers.

CALVES

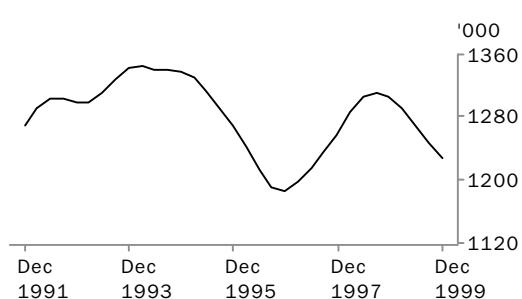

The trend estimate for calf slaughterings fell slightly to 273,000 in December quarter 1999.

SHEEP AND LAMBS

The trend estimate for sheep slaughterings fell by 3% in December quarter 1999 to 3.5 million due to weakened domestic demand. There was a continued rise in the trend estimate for lamb slaughterings, up slightly to 4.2 million with strong demand for lamb in both domestic and export markets.

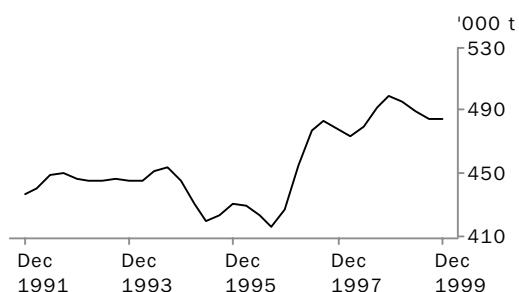

PIGS

The trend estimate for pig slaughterings fell 2% in December quarter 1999 to 1.2 million, with sow numbers remaining low. This was the fifth consecutive quarterly decrease.

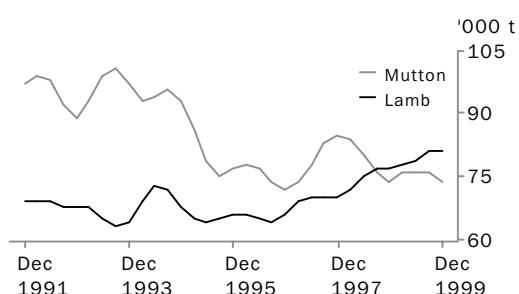

## M E A T P R O D U C T I O N : Trend

### BEEF

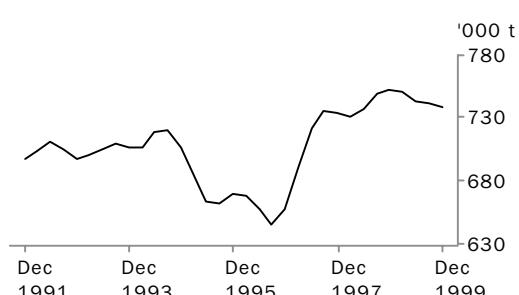

The trend estimate for beef production remained steady at 485,000 tonnes in December quarter 1999 as supply remained tight due to herd rebuilding.

### MUTTON AND LAMB

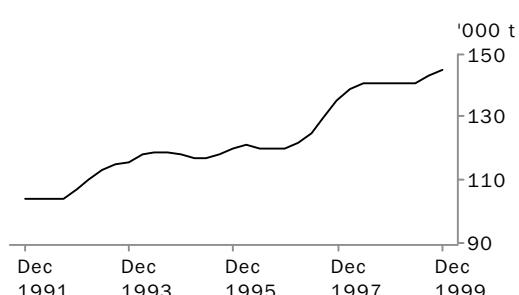

The trend estimate for mutton production fell by 2% in December quarter 1999 to 74,400 tonnes. The trend estimate for lamb production increased slightly to 81,500 tonnes in December quarter 1999, the highest quarterly lamb production on record.

### TOTAL RED MEAT

The trend estimate for total red meat production fell slightly to 738,000 tonnes in December quarter 1999.

### CHICKEN MEAT

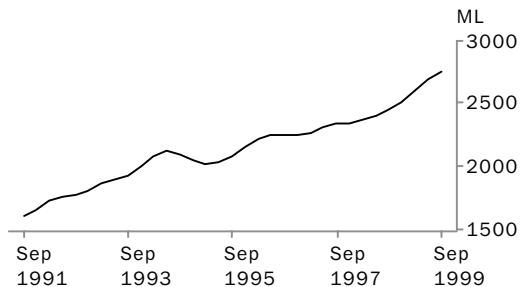

The trend estimate for chicken meat production rose 1% in December quarter 1999 to 145,000 tonnes. Production remained high due to low feed costs.

## LIVESTOCK PRODUCTS: Trend

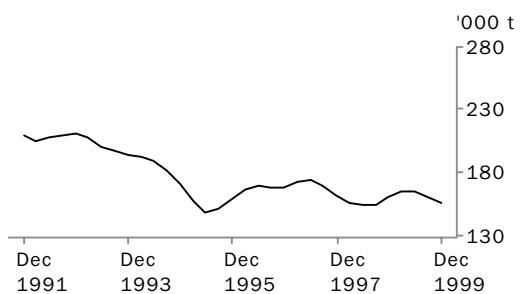

---

WHOLE MILK INTAKE BY FACTORIES

The trend estimate for whole milk intake by factories rose by 2% in September quarter 1999 to 2.8 billion litres.

BROKERS AND DEALERS RECEIVALS OF TAXABLE WOOL

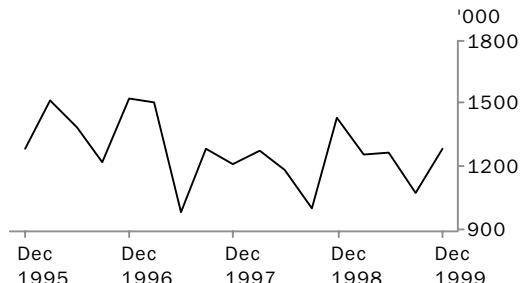

The trend estimate for wool receivals by brokers and dealers for September quarter 1999 was revised upwards by 4%. The December quarter 1999 trend estimate of 156,000 tonnes was 3% below the September quarter 1999 revised figure.

## L I V E S T O C K   E X P O R T S : Original

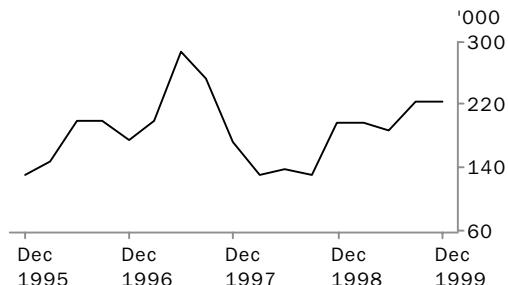

---

### EXPORTS OF LIVE SHEEP

Live sheep exports rose 20% in December quarter 1999 to 1.3 million with strengthened demand from the Middle East. Although the unit value (\$36.53) fell 5% from the previous quarter the increased quantity saw the gross value rise 14% to \$47.1 million.

### EXPORTS OF LIVE CATTLE

Live cattle exports remained steady in December quarter 1999 at 225,000. The unit value (\$511.95) rose 8% over the previous quarter. With numbers remaining constant the gross value (\$115.1 million) also rose 8%.

## WHAT IF...? REVISIONS TO TREND ESTIMATES

### EFFECT OF NEW SEASONALLY ADJUSTED ESTIMATES ON TREND ESTIMATES

Each time new seasonally adjusted estimates become available, trend estimates are revised (see paragraph 21 of the Explanatory Notes).

#### TREND REVISIONS

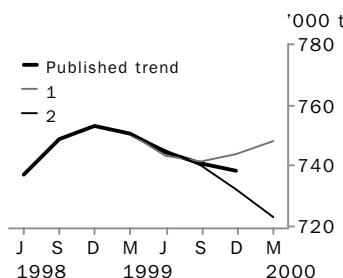

The graphs and tables which follow present the effect of two possible new seasonally adjusted estimates on the previous trend estimates:

**1** The March Quarter 2000 seasonally adjusted estimate is higher than the December Quarter 1999 estimate by the percentage shown.

**2** The March Quarter 2000 seasonally adjusted estimate is lower than the December Quarter 1999 estimate by the percentage shown.

These percentages were chosen because they represent the average absolute quarterly percentage change for these series over the last ten years.

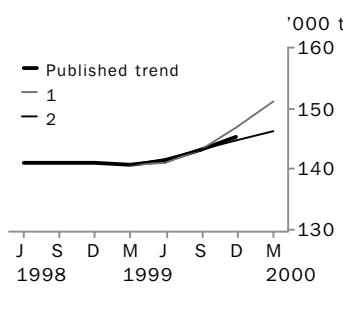

#### RED MEAT PRODUCTION

#### WHAT IF NEXT QUARTER'S SEASONALLY ADJUSTED ESTIMATE:

	TREND AS PUBLISHED		rises by 3% on Dec Qtr 1999		falls by 3% on Dec Qtr 1999

## WHAT IF...? REVISIONS TO TREND ESTIMATES

---

### EFFECT OF NEW SEASONALLY ADJUSTED ESTIMATES ON TREND ESTIMATES

Readers should exercise care when interpreting trend estimates. The last three trend estimates, in particular, are likely to be revised when new seasonally adjusted estimates become available.

#### TREND REVISIONS

The graph and tables which follow present the effect of two possible scenarios on the previous trend estimates:

**1** The December Quarter 1999 seasonally adjusted estimate is higher than the September Quarter 1999 estimate by:

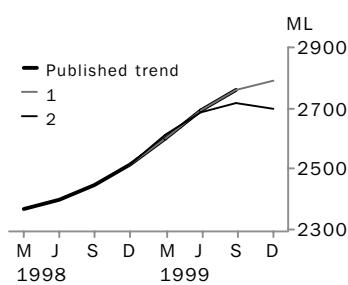

- +2% for whole milk intake by factories.

**2** The December Quarter 1999 seasonally adjusted estimate is lower than the September Quarter 1999 estimate by:

- 2% for whole milk intake by factories.

These percentages were chosen because they represent the average absolute quarterly percentage change for these series over the last ten years.

WHOLE MILK INTAKE BY FACTORIES

WHAT IF NEXT QUARTER'S SEASONALLY ADJUSTED ESTIMATE:

	TREND AS PUBLISHED		rises by 2% on Sep Qtr 1999		falls by 2% on Sep Qtr 1999

Dec Qtr 1999	—	—	2 792	1.2	2 699	-0.6

## EXPLANATORY NOTES

---

### INTRODUCTION

- 1** This publication contains information on livestock slaughterings, meat production, stocks of frozen meat, exports of live sheep and live cattle, exports of fresh, frozen and processed meat, and whole milk intake by factories, market milk sales by factories and receivals of taxable wool by wool brokers and dealers.
- 2** The figures shown in this publication have been revised where necessary and as a consequence may not agree with similar data shown in previous publications.
- 3** Where figures have been rounded, discrepancies may occur between sums of the component items and totals.
- 4** Unless indicated otherwise, Australian totals include data for all States and both Territories.

### LIVESTOCK SLAUGHTERINGS AND MEAT PRODUCTION

- 5** The statistics on slaughterings and meat production are based on a monthly collection from abattoirs and other major slaughtering establishments and include estimates of animals slaughtered on farms and by country butchers and other small slaughtering establishments.
- 6** Cattle slaughterings in the Australian Capital Territory and the Northern Territory (including domesticated buffaloes) and the respective meat produced, are included in the Australian totals in tables 1-9 and 11-17. Red meat is shown in carcass weight and excludes offal.
- 7** Care should be taken when using this information as the figures only relate to slaughterings for human consumption and do not include animals condemned or those killed for boiling down.
- 8** Poultry slaughterings and meat produced statistics have been compiled from returns supplied by commercial poultry slaughtering establishments and comprise boilers, fryers and roasters. Many small producers are excluded from the collection; however, the statistics represent a high level of coverage. Tasmanian data are excluded from the Australian total.
- 9** Chicken meat is shown in dressed weight of whole birds, pieces and giblets. Some slaughterings and meat production statistics for 'Ducks and Drakes' and 'Other Fowls and Turkeys' are available by contacting the ABS on Hobart 03 6222 5939 or by writing to GPO Box 66a, Hobart TAS 7001 (Attention: Agriculture Section).

### STOCKS OF FROZEN MEAT

- 10** Table 20 shows stocks of frozen meat held in cold stores registered to handle meat for export and includes meat passed for export, canning and other purposes. It also includes boneless and carcass meat. Buffalo meat is included in beef (Source: Department of Agriculture, Fisheries and Forestry (formerly Primary Industries and Energy)).

### EXPORTS OF FRESH, FROZEN AND PROCESSED MEAT

- 11** Table 21 shows exports of fresh, frozen and processed meat, excluding offal. Factors can be applied to beef, veal, mutton and lamb bone-out figures to derive bone-in carcass weight which, when added to bone-in figures, shows total exports in carcass weight. The factor for beef and veal is 1.5 and for mutton and lamb, 2.0 (Source: Department of Agriculture, Fisheries and Forestry (formerly Primary Industries and Energy)).

- 12** Beef also includes buffalo meat. Bacon and ham shown is the cured carcass weight of smoked or cooked bacon and ham. It also includes the stated net weight of packs of canned bacon and ham. Canned meat is shown as the canned weight and excludes canned bacon and ham.

## EXPLANATORY NOTES

---

### LIVE SHEEP AND CATTLE EXPORTS

**13** Table 22 contains statistics of the number of live sheep and cattle exported, the gross weight, gross value and unit value. The unit value is obtained by dividing the gross value by the number of animals exported. Sheep and cattle exported for breeding are excluded.

### MILK

**14** Tables 2, 23, 24 and 26 contain statistics collected by the Australian Dairy Corporation (ADC). Whole milk intake by factories includes the whole milk equivalent of farm cream intake. Market milk sales includes white, flavoured, high and low fat milk and uht milk.

### WOOL RECEIVALS

**15** The statistics in Tables 25 and 26 show the amount of taxable wool received by brokers and purchased by dealers from wool producers. It excludes wool received by brokers on which tax has already been paid by other dealers (private buyers) or brokers.

**16** The information shown is on the basis of the State in which wool has actually been received and does not necessarily reflect the production of wool in that State.

### SEASONAL ADJUSTMENT

**17** Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences can be more clearly recognised.

**18** In the seasonal adjustment of the livestock estimates, account has been taken of both normal seasonal factors and 'trading-day' effects, where significant, (arising from the varying length of each quarter and the varying numbers of Sundays, Mondays, Tuesdays etc. in the quarter). Adjustments are also made for the effects of change in the date of Easter holidays, again, where significant. Seasonal adjustment does not remove from the series the effect of irregular influences (e.g. abnormal weather, industrial disputes).

**19** The State component series have been seasonally adjusted independently. Therefore, the adjusted components may not add to the Australian Group totals.

**20** As happens with all seasonally adjusted series, the seasonal factors are reviewed annually to take account of each additional year's data.

### TREND ESTIMATES

**21** A trend estimate is obtained by reducing the irregular component from the seasonally adjusted series. In this publication trend estimates are generally derived by applying a seven term Henderson moving average to the seasonally adjusted series. The seven term Henderson, (like all Henderson averages) is symmetric, but as the end of a time series is approached, asymmetric forms of the average are applied. Unlike the weights of the standard seven term Henderson moving average, the weights employed here have been tailored to suit the particular characteristics of individual series. While the asymmetric weights enable the trend to be calculated for recent quarters, it does result in revisions to the estimates for the most recent three quarters as additional observations become available. Revisions of trend estimates will also occur with revisions to the original data and re-estimation of seasonal factors.

**22** Sensitivity analysis indicates the potential magnitude and direction of revisions created to the last three estimates. It aims to show how a specified movement in the seasonally adjusted data in the next period will affect the trend path of the time series. By showing how sensitive the trend estimates are to the addition of new data, the analysis provides information which can be used in the assessment of the trend's stability.
