NOTES

ABOUT THIS PUBLICATION

This publication presents estimates which are derived using a combination of data from the Australian Bureau of Statistics (ABS) annual Economic Activity Survey (EAS) and business income tax data provided to the Australian Taxation Office (ATO).

CHANGES TO THIS PUBLICATION

The series in this publication have been expanded to include Australian and New Zealand Standard Industrial Classification (ANZSIC) Subdivision 75 Services to finance and insurance. The remaining subdivisions within the Finance and insurance industry division are not included. The 1999–2000 EASTAX estimates included Services to agriculture; hunting and trapping, however, estimates for this subdivision are not available for 2000–01.

The estimates in this publication are recorded exclusive of the Goods and Services Tax, introduced on 1 July 2000.

FUTURE CHANGES

In April 2000, the ABS released an *Information Paper: ABS Statistics and The New Tax System* (cat. no. 1358.0), which foreshadowed changes in the statistical infrastructure supporting the compilation of ABS economic series. The changes will allow better use of data available from the taxation system to improve efficiency, coverage and sample design of ABS surveys.

In future releases of this publication, estimates will be compiled on a new basis. An *Information Paper: Improvements in ABS Economic Statistics [Arising from The New Tax System]* (cat. no. 1372.0), was released on the 6th May 2002, which describes the forthcoming changes in more detail and provides information about the treatment of statistical impacts of the changes across ABS economic series.

COMMENTS

The ABS welcomes feedback from readers regarding the usefulness, range and quality of the data presented and explanations provided.

Please send any comments to: The Director, Economic Activity Surveys Section, Australian Bureau of Statistics, Locked Bag 10, Belconnen ACT 2616. Alternatively, email <clem.tozer@abs.gov.au>.

CHAPTER 1

INTRODUCTION

OVERVIEW

For a number of years, the ABS has been expanding the range of data sources it uses in order to decrease the statistical reporting load placed on providers, while continuing to increase the range of information available. A major alternate source of data is the Australian Taxation Office (ATO), which collects key economic data for business income tax purposes. Under taxation law, data may be passed by the Commissioner for Taxation to the ABS for statistical purposes. The estimates in this publication have been sourced from a combination of data from the annual Economic Activity Survey (EAS) conducted by the ABS, business income tax data provided to the ATO and information from a range of other ABS direct collections.

This publication is comprised of three Chapters. Chapter one, Introduction, contains an overview of information relating to the production of the EASTAX estimates. Chapter two, Selected industries, contains estimates at the national level, while the third Chapter contains national and state experimental estimates. The experimental state estimates do not include the same detailed level of industry information or data items due to confidentiality restrictions and relative sampling error issues.

This publication contains information for a subset of industries referred to as 'Selected industries'. The 'Selected industries' are made up of 'Selected goods producing industries' and 'Selected service industries'.

'Selected goods producing industries' comprise: Mining; Manufacturing; and Electricity, gas and water supply.

'Selected service industries' comprise: Construction; Wholesale trade; Retail trade; Accommodation, cafes and restaurants; Transport and storage; Communication services; Property and business services; Cultural and recreational services, Services to finance, Health, and Personal services.

The remaining industries, which are excluded from the estimates in this publication, are:

- OTHER SERVICE INDUSTRIES comprised of: EDUCATION, COMMUNITY SERVICE AND RELIGIOUS ORGANISATIONS, INTEREST GROUPS (trade unions, industry associations etc.) and Public Order and Safety Services. Analysis of the Other Service Industries has shown that there is very little gain from using ATO business income tax data to substitute/supplement the data from the directly collected survey, because these types of organisations generally have minimal taxation obligations
- From the Finance and insurance industry, only Services to finance and Insurance (subdivision 75) has been included. Because of the complex business structures in this industry, other areas of this division require further investigation by the ABS before being included
- AGRICULTURE, FORESTRY AND FISHING has been excluded, but it is intended to reintroduce estimates for this industry in 2002–03.

OVERVIEW continued

The ABS is committed to a program of continual improvement in the statistics it produces. It strives to increase the range and quality of data it provides to users while at the same time reducing the reporting burden placed on businesses. In recent years this has been achieved with the help of data from the ATO.

The ABS and ATO have been working closely together for many years in an effort to improve the quality of Australia's economic statistics. While the legislation under which the ABS operates (the *Census and Statistics Act 1905*) does not allow it to provide the ATO with data reported by individual businesses, the *Income Tax Assessment Act 1986* enables the ATO to provide the ABS with such data. These data are used for statistical purposes only.

EXPERIMENTAL ESTIMATES

Some tables in this publication are presented as experimental estimates. These tables show business characteristics at a detailed industry level for Australia and business characteristics at industry division by state and territory. The estimates are based on a relatively small ABS sample survey of businesses combined with business income tax data provided to the ATO and are subject to both sample and non-sample error.

Chapter three, Experimental estimates, contains three experimental national tables. These are tables 3.1, 3.2 and 3.3 which are presented to illustrate the level of detail available and to give readers an indication of data available on request. They are considered experimental and should be used with caution. The ANZSIC groups detailed in tables 3.2 and 3.3 were selected as these industries were considered to have sufficient data quality at the level of detail presented. More details regarding quality can be found in the Explanatory and Technical Notes. Relative standard errors are included to give a measure of sampling error associated with the estimates.

Chapter three, Experimental estimates, also contains two experimental state and territory tables. It is intended to remove this experimental tag in the future once further investigations have been carried out on the methodology used to produce the state estimates. In compiling the state estimates, for the majority of multi-state businesses, state dissections for items were available either from existing ABS business collections or from the ATO and the data were used to dissect the variables included in this publication by state. The majority of businesses (approximately two-thirds by value) operate in a single state. Sales data obtained for multi-state businesses were used to dissect Total operating income, Total operating expenses and Operating profit before tax (OPBT) at the state level. Wages data was used to dissect Labour costs. More details of the methodology and assumptions used to identify and allocate state dissections in this publication are outlined in Technical Note 1: Methodology, on page 49.

CAVEATS

All tables within Chapter three, are considered experimental and should be used with caution.

Some of the assumptions that have been relied upon in the production of these estimates cannot be directly tested easily. Users are advised to review the assumptions and methodology for themselves before deciding on fitness for purpose. Details regarding the quality of the estimates and assumptions can be found in the Explanatory Notes and Technical Note 2 on pages 45 and 53.

CAVEATS continued

Differences between data presented in this publication and other ABS publications may be due to differences in scope, reference period, statistical units and the definition of data items. More details on these differences and comparisons can be found in Technical Note 2, Limitations of financial data analysis, on page 53.

In the future, it is expected that the methodology used to produce these experimental estimates will be improved to a point where the ABS will remove the 'experimental' tag.

SPECIFIC AREAS OF CONCERN

Part of the validation process adopted by the ABS in preparing economic statistics involves the comparison of results across similar statistical series that are available. When comparing the 1999–2000 and 2000–01 EASTAX results with results from collections such as the Monthly Retail Trade survey and the Quarterly Business Indicator Survey (QBIS) we find that the growth as measured in the EASTAX survey for the Retail Trade industry over this period was significantly stronger than levels indicated by the other collections. Taking into account other factors influencing economic activity in the retail industry over this period, the ABS holds some concern for the level of growth shown in the EASTAX estimates for some components of the division. Users are advised that care should be taken in conducting analysis on the Retail Trade industry using these data.

Stronger than expected growth is also evident in EASTAX wages and salaries estimates over the period 1999–2000 to 2000–01. Other sources such as QBIS and the Survey of Employment and Earnings are showing overall growth in wages and salaries of about 6%, while EASTAX shows growth of 11% over the same period. Again, users are advised that care should be exercised in conducting any detailed analysis using wages and salaries data from this release.

The ABS is continuing to investigate a number of factors which may be contributing to the apparent differences in the data, including changed reporting to the ATO resulting from the introduction of the New Tax System. As a result, some revisions are likely to be reflected in 2000–01 estimates to be released in the next edition of this publication.

The ABS is undertaking different streams of development work in order to improve the quality and range of information available. Changes in the external environment provide additional opportunities to improve the national statistical service. For example, changes under The New Tax System (TNTS) have potential to offer the ABS more opportunities, however it may still be some time before the benefits of these opportunities are realised.

The coverage of EASTAX estimates is to be expanded to eventually provide a complete picture across the whole economy. In addition, the ABS will continue to refine the methods outlined in this publication to expand the range, detail and quality of information provided at the national and state level.

FUTURE PLANS

CHAPTER 2

SELECTED INDUSTRIES

SUMMARY OF FINDINGS
Selected goods producing
industries

In 2000–01, the total operating income of the Selected goods producing industries was \$357,901m an increase of \$27,675m (8%) over the 1999–2000 levels. The most significant component of operating income was sales of goods which was \$320,969m, up \$26,420m (9%). Total operating expenditure, increased \$20,353m to \$320,844m driven mainly by increased purchases expenditure up \$14,382m to \$163,503m. As a result of these changes the OPBT of the Selected goods producing industries increased \$7,322m (25%) to \$37,057m, over the twelve month period.

The Mining industry was the main driver of the increase in OPBT for the Selected goods producing industries. Total operating income increased \$13,902m (31%) to \$58,804m, of which the Oil and gas extraction subdivision contributed an increase of \$8,966m (81%). Operating expenditure also increased, but to a lesser extent, up \$5,824m (16%). As a result, OPBT for the Mining industry nearly doubled in value from 1999–2000 levels to \$16,175m.

Offsetting this increase were declining profits in the Manufacturing and the Electricity, gas and water supply industries. OPBT in the Manufacturing industry decreased \$683m (4%). Operating income increased \$12,373m (5%) to \$261,464m, driven by increased income in the Petroleum, coal, chemical and associated product manufacturing subdivision, up \$7,294m (18%). These increases were offset by an increase in operating expenditure of \$13,057m (6%), which led to the decline in profits. The Electricity, gas and water supply industry recorded a decrease over the same period of \$74m (2%).

Selected service industries

In 2000–01, the operating income of the Selected service industries was \$979,592m, an increase of \$75,905m (8%) over that recorded in 1999–2000. Sales of goods contributed most to the increase, up \$37,244m (7%) to \$550,369m, while income from services increased \$33,215m (10%) to \$365,126m. Total operating expenditure increased \$80,091m (10%) to \$919,520m driven mainly by increased purchases expenditure up \$29,477m (7%) to \$443,785m. As a result of these changes the OPBT of the Selected service industries decreased \$4,186m (7%) to \$60,072m, over the twelve month period.

The Service industries that had the largest increases in operating income and operating expenditure were the Retail trade, Wholesale trade and Property and Business services industries.

In 2000–01, operating income in the Retail trade industry increased \$21,679m (10%) to \$229,726m over 1999–2000 levels. This increase was mainly driven by an increase in operating income of the Motor vehicle retailing and services subdivision up \$8,881m (14%) and the Food retailing subdivision up \$7,890m (12%). However, the OPBT in the Retail trade industry fell \$2,477m (31%), mainly due to a fall in OPBT of \$2,797m (57%) in the Personal and household good retailing subdivision.

7

Selected service industries continued

Operating income in the Wholesale trade industry increased

\$19,940m (8%) to \$256,376m in 2000–01. Increases in operating income were recorded for each subdivision within the Wholesale trade industry, with the largest percentage increase recorded in the Basic material wholesaling subdivision up \$6,710m (10%). Despite the increases in operating income, the industry overall experienced a decline in OPBT in 2000–01, with the Machinery and motor vehicle wholesaling subdivision recording the largest decline of \$629m (23%).

In 2000–01, operating income in the Property and Business services industry increased \$17,373m (13%) over the 1999–2000 levels. The Business services subdivision recorded the strongest growth with operating income increasing \$14,258m (13%).

The Construction industry was the only Selected service industry to record a fall in operating income in 2000–01 with a decrease of \$5,809m (6%). This decrease was mainly driven by a fall in the General construction subdivision of \$5,331m (9%). Operating expenditure for the Construction industry also fell in 2000–01, down \$3,376m (4%).

Non-employing businesses

For the industries covered in this publication, non-employing businesses account for 5% of total operating income, however, this contribution differed between industries. Industries in which the contribution of non-employing businesses is above 10% of operating income are Personal services, Services to Finance, Construction, Health services and Property and Business services.

In terms of growth in total operating income between 1999–2000 and 2000–01, employing businesses recorded an increase of 101,263m (9%), while non-employing businesses increased 2,317m (4%).

Non-employing businesses have a relatively high contribution to OPBT (17%). However, it should be noted that much of this profit is attributable to the OPBT of sole proprietors and partnerships, which comprise 78% of non-employing businesses. The drawings and/or labour costs of these persons are not reflected in total operating business expenses, but are recorded as drawings from profits, and as such are not reflected in the EASTAX estimates.

CHAPTER 3

EXPERIMENTAL ESTIMATES

INTRODUCTION

This Chapter presents a selection of experimental estimates using detailed results from the collection. Table 3.1 provides statistics at the ANZSIC Class level for economic indicators. Tables 3.2 and 3.3 provide a more complete range of financial data for a small group of selected industry classes. Tables 3.4 and 3.5 provide a state and territory dissection of key economic indicators by employing status and industry. The final three tables of the Chapter, tables 3.6, 3.7 and 3.8, provide an indication of the sampling error associated with the estimates. Note that the estimates are also subject to non-sampling error, which is discussed in Technical Note 2.

The data presented in this Chapter are presented as experimental estimates, because they provide detailed industry level data and state and territory data based on a relatively new methodology (see Technical Note 1: Methodology for more details). Because of the experimental nature of these estimates, caution should be exercised with any analysis.

STATE ESTIMATES

In 2000–01, businesses in the two largest states (New South Wales and Victoria) accounted for 55% of the Total operating income of businesses in the Selected goods producing industries and 65% of Total operating income of businesses in the Selected service industries. Businesses in those two states also accounted for 57% and 65% of the Total operating expenses, 40% and 65% of Operating profit before tax (OPBT) and 61% and 67% of the Labour costs of businesses in the Selected goods producing and the Selected service industries respectively.

Employing businesses in New South Wales accounted for 27% of the Total operating income of employing businesses in the Selected goods producing industries and 38% of the Total operating income of employing businesses in the Selected service industries. The proportions for the other states were; Victoria 28% and 27%, Queensland 18% and 16%, South Australia 8% and 6%, Western Australia 15% and 9%, Tasmania 2% and 2%, Northern Territory 1% and 1% and Australian Capital Territory 0% and 1%.

Over the 12 month period 1999–2000 to 2000–01, growth rates in total income varied between the Selected goods producing industries and the Selected service industries.

For Total Selected goods producing industries, the Northern Territory recorded the strongest growth (26%). Western Australia also recorded strong growth (21%) for the Goods producing industries, but by contrast, recorded the lowest growth rate (2%) for the Selected service industries.

Similarly, South Australia recorded the strongest growth for the Selected service industries (13%), but recorded the lowest growth rate for the Goods producing industries (1%).

EXPLANATORY NOTES

INTRODUCTION

- 1 The estimates presented in this publication have been derived using a combination of directly collected data from the annual Economic Activity Survey (EAS), conducted by the Australian Bureau of Statistics (ABS), and business income tax data provided to the Australian Taxation Office (ATO). To produce estimates at the state and territory level, this combined dataset was then matched to a number of ABS direct collections to obtain further state dissections.
- **2** Since 1996–97 the ABS has combined data from the EAS collection and business income tax data provided to the ATO. For information on how the ABS has been using ATO data over recent years to compile economic statistics, refer to the ABS *Information Paper: Experimental Estimates, Australian Industry, a State Perspective, 1998–99* (cat. no. 8156.0), Appendix 1—Use of ATO Data in Economic Statistics.
- **3** The national ANZSIC class and the state and territory estimates in Chapter three are considered to be experimental and should be used with care. For discussion and analysis regarding these estimates users should refer to the Technical Note 2: Limitations of Financial Data Analysis.
- **4** The estimates presented in this publication are for selected industries, and have been sourced from both employing and non-employing business entities. The estimates supplement the relatively small scale EAS collection conducted by the ABS.

5 The estimates presented in this publication are based, where possible, on a June-end financial year.

- **6** The EAS estimates are based on details obtained from statements of financial performance and position collected from selected businesses, mainly by mail out questionnaires. For 2000–01, businesses were asked to provide data in respect of the financial year ended June 2001. In a minority of cases, where businesses did not account on a June-year basis, details were reported in respect of an accounting year which ended between October 2000 and September 2001.
- **7** The ATO data are based on business income tax returns lodged with the ATO for the financial year ended June 2001.

SCOPE AND COVERAGE

REFERENCE PERIOD

- **8** The scope of the EASTAX estimates in this publication consists of all business entities in the Australian economy, except for:
 - Finance and insurance businesses (Note: Services to finance is included in the set of estimates)
 - Businesses classified as Agriculture, Education, Community services, Religious organisations, Interest groups (trade unions, industry associations etc.) or Public order and safety services industries
 - Businesses classified as being in the General Government sector
 (Note: government-owned Public Trading Enterprises are included).

STATISTICAL UNIT

- **9** The business unit about which information is collected and published for the EAS collection is termed the management unit. This is the highest level unit within a business for which a set of management accounts is maintained. In most cases it coincides with the legal entity owning the business (i.e. company, partnership, trust, sole operator, etc.). However, in the case of large diversified businesses there are often a number of management units, each coinciding with a 'division' or 'line of business'. A division or line of business is recognised where separate and comprehensive accounts are compiled for it.
- **10** For the ATO, business income tax returns are submitted for legal entities. Management units are generally made up of one or more legal entities, but it is possible for legal entities to be made up of one or more management units.
- **11** The ABS Business Register provided the population frame from which management units were selected for inclusion in the EAS. It also provided a multi-state indicator which was used as a starting point in the methodology to derive state level estimates from the EASTAX data.
- **12** For non-employing businesses, which were not included on the ABS Business Register, ATO business income tax records were used as the population frame. All non-employing businesses were assumed to operate in a single state.
- **13** Since the data in this publication are the result of combining ABS directly collected data with ATO data, the statistical unit has been referred to as a 'business entity'. As the ABS unit and the ATO unit are not always comparable, to provide a count of the number of business entities is not simply a matter of summing the legal entities in the ABS collected data and the ATO data. Any legal or other entities that are not included in ABS or ATO data files (e.g. shelf companies) are not included in the estimates shown in this publication.
- **14** Estimates in this publication from the directly collected businesses have been adjusted to allow for lags in the processing of new businesses to the *ABS Business Register*, and the omission of some businesses from the register.
- **15** A sample of approximately 20,000 management units was selected for the directly collected part of the EASTAX collection. Stratified random sampling techniques were used. All management units with employment of 200 or more persons were automatically selected in the sample.
- **16** To supplement the directly collected data, the survey population was matched to the business income tax file, (refer to Technical Note 1: Methodology).
- **17** The EASTAX sample was not selected on the basis of state for single state businesses. As a result, an increase in sampling error in some states may have occurred. To some extent, any increase in sampling error will have been offset by the expanded use of business income tax data, which provides an increase in sample size across each state. The sampling error may become more significant at the ANZSIC division and subdivision levels, depending on the number of businesses that each business in the sample represents in that particular state. Refer to Technical Note 2: Limitations of Financial Data Analysis on page 53 and the relative standard errors for further details.

SAMPLING

CLASSIFICATION BY INDUSTRY

18 This publication presents industry estimates classified according to the *Australian and New Zealand Standard Industrial Classification (ANZSIC), 1993* (cat. no. 1292.0), commonly known as ANZSIC. Each business unit is classified to a single industry class, even where it operates across more than one state. The industry allocated is based on an estimate of the primary activity of the management unit, irrespective of whether the management unit undertakes a single activity or a range of activities. For example, a management unit which derives most of its income from construction activities would have all of its operations included in estimates for the Construction division, even if significant secondary activities (e.g. quarrying) were undertaken by the management unit. This differs from the approach that might be taken to the collection of statistics on an activity basis.

STATE PROPORTIONS

- **19** Refer to Technical Note 1: Methodology, for details on the process used to derive state proportions from EASTAX data. Outlined below are some of the assumptions users should be aware of when using the state level estimates presented in this publication.
- **20** Differences in scope, coverage and business classifications exist between the ABS collections used to obtain state dissection information for businesses. In some instances, state dissections have been based on quarterly rather than annual data due to the unavailability of annual state estimates.
- **21** Sales-based proportions obtained for each multi-state business have been used to apportion EASTAX estimates of Total income, Total expenses and Operating profit before tax (OPBT) data across the states for that business. Similarly, Wages-based proportions have been used to apportion Labour costs across states.
- **22** ABS collections used to obtain state proportions for multi-state businesses are not always consistent in the wording of the state-based questions. For example, the Wholesale Industry Survey collects estimates of income from the sales of goods and services on the basis of the state or territory from which the goods were despatched, while the Retail Industry Survey collects estimates of income from the sales of goods and services on the basis of where the final purchase occurred. These different treatments are necessary depending on the industries in scope of each collection. Wherever possible, the state dissections for a particular industry have used the data source best suited to that industry. In some cases employment has been used as a proxy for obtaining state proportions.
- 23 Due to the nature of their activity, some businesses find it difficult to respond to state-based questions. Examples include businesses in the Communication Services industry, and to a lesser extent the Transport and Storage industry, where the activity of the business is not necessarily confined by state boundaries. As much state information as possible was collected for each selected business, however, it is recognised that some identified single state businesses may actually operate across more than one state. In most cases, the effect on the estimates due to this factor is minimal refer to Technical Note 1: Methodology.
- **24** Where figures have been rounded, discrepancies may occur between the sums of the component items and totals. Published percentages are calculated prior to rounding of figures and therefore some discrepancy may occur between those percentages and those that could be calculated from rounded figures.
- **25** There are small changes in totals from those in *Australian Industry, 1999–2000* (cat. no. 8155.0) and *Experimental Estimates, Australian Industry, a State Perspective* (cat. no. 8156.0) due to revisions in estimates. The 1998–99 and 1999–2000 estimates have been revised due to improved editing practices and additional information from providers.

- **27** A range of individual service industry publications are also produced by the ABS. In general, these publications contain considerable detail about the employing sector of each industry.

ADDITIONAL PRODUCTS

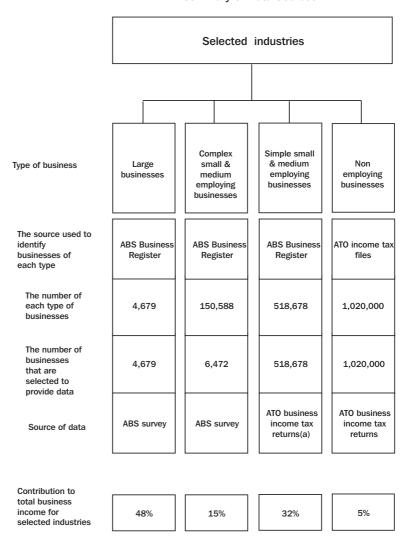

- Summary of Industry Performance, Australia, Data Report Electronic Delivery (cat. no. 8140.0.55.002) provides a one page summary of each industry's structure, income statement, balance sheet, economic values, business averages and performance ratios to the ANZSIC subdivision (two digit) level. For most ANZSIC subdivisions, separate tables are also available by size of business.
- Industry Concentration Statistics, Data Report Electronic Delivery (cat. no. 8140.0.55.001) provides the proportions of sales, persons employed and industry value added that are concentrated among the 20 largest enterprise groups operating in each industry. The 'largest 20' are further subdivided by groups of four, grouping the first four enterprise groups, the second four and so on.
- **28** Both the Summaries of Industry Performance and Industry Concentration Statistics can either be purchased separately as a product, or accessed through the ABS web based information service, AusStats. AusStats is a subscription service, providing access to a comprehensive range of ABS material. It is available online, via the World Wide Web, and is a part of the ABS web site where both free and charged data are integrated.

TECHNICAL NOTE 1 METHODOLOGY

PRODUCING EASTAX ESTIMATES

1 The estimates in this publication are the result of combining ABS directly collected data with business income tax data sourced from the ATO. The diagram below is a summary of the different data sources used for businesses in producing these estimates.

Summary of Data Sources

⁽a) Approximately 3,700 of these businesses also receive an EAS survey form.

Source: ABS, Economic Activity Survey, 2000–2001; ATO, Business Income Tax Files, 2000–2001.

Large businesses

- **2** Information for large employing businesses was sourced from the EAS collection. The two main reasons for this approach were:
 - the majority of large employing businesses (management units with 200 or more employees) have more than one legal entity, making it difficult to identify all legal entities for that business on the business income tax files

Large businesses continued

ABS requires from large businesses.

Complex small and medium employing businesses

3 Information for complex small and medium employing businesses was also sourced from the EAS collection. There are two main types of businesses that are collectively termed 'complex small and medium employing businesses', and there are difficulties in sourcing business financial data from the business income tax files for these businesses. These businesses are:

• business income tax data does not include all of the detailed information that the

- small and medium businesses with more than one legal entity
- 'tax exempt' businesses such as charities that are not required to complete business income tax returns.

Simple small and medium employing businesses

- **4** Small and medium employing businesses that have simple structures (i.e. management units with one legal entity) had their data sourced from the business income tax files.
- **5** Matching the ATO business income tax files to ABS sources for 'Simple small and medium employing' businesses.
- **6** Business entities must be matched to the business income tax files to obtain their business financial data. Given the complex nature of reconciling businesses on the business income tax files with the ABS Business Register, a complete match for all businesses is not possible. However, it is expected that for future years the number of records matched will increase as a result of the introduction of the Australian Business Number (ABN) and its inclusion on both the business income tax files and the ABS Business Register.
- **7** The ABS was able to identify 78% of selected businesses on the business income tax files. There are several reasons why there is not a 100% match rate:
- the ABS uses business income tax files that are generated 12 months after the end of the financial year
- a proportion of businesses that are included on the ABS Business Register would not have traded for the year in question.
- **8** The sampling and estimation methods used by the ABS take into account selected businesses that are not able to be identified on the business income tax files.
- **9** For 'matched businesses', the information is extracted from the business income tax files.

Non-employing businesses

- **10** Data for non-employing businesses were sourced from the business income tax files. Up until June 2001, the ABS Business Register excluded non-employing businesses, but the business income tax files provides a rich source of data for businesses in the non-employing sector.
- **11** For non-employing businesses, the ABS used a definition based on reported values for wages and salaries, employee superannuation expenses and size of reported income and expenses. In this process some businesses may be included in both the population of employing businesses and the population of non-employing businesses, while other businesses may be excluded from both populations. Any overlaps or gaps between the two populations are not statistically significant.
- **12** Estimates for the non-employing sector of the selected industries were produced by aggregating unit record data obtained using the above methodology.

Aggregating estimates

13 Estimates for the whole of the selected industries were produced by adding together the components for each of the business types, that is Large businesses, Complex small and medium employing businesses, Simple small and medium employing businesses and non-employing businesses.

Aggregating estimates continued

STATE ESTIMATES

- **14** Further detailed information on the methodology used to compile these estimates is outlined in the ABS *Information Paper: The Expanded Use of Business Income Tax Data in ABS Economic Statistics—Experimental Estimates for Selected Industries,* 1994–95 and 1995–96 (cat. no..5672.0).
- **15** The methodology for producing state estimates separates business entities into two groups:
- those businesses identified as operating in one state or territory only (single state businesses)
- those businesses identified as operating across more than one state or territory (multi-state businesses).
- **16** For all employing businesses, a single state/multi-state indicator was obtained from the ABS Business Register. If up-to-date information regarding the state activities of a business was obtained from an ABS direct collection, the indicator information from the ABS Business Register was not used.
- **17** It was assumed that all non-employing businesses operated in a single state only.
- **18** The following diagram provides information on the number of businesses and per cent of contribution of all single state and multi-state businesses as identified on the ABS Business Register, and after allocation based on information from ABS direct collections.

	MULTI-STATE on ABS Business Register*	SINGLE STATE on ABS Business Register*		
STATE PROPORTIONS OBTAINED FROM DATA REPORTED TO AN ABS COLLECTION	Q1—(allocated to single and multiple states) no. of Businesses : 1,837 % contribution to Income : 29.2	Q3—(allocated to single and multiple states) no. of Businesses : 20,643 % contribution to Income : 25.2		
NO STATE PROPORTIONS AVAILABLE FROM ABS COLLECTIONS	Q2.1—(allocated to multiple states) Business contacted for an estimate (Total Income > = \$100m) no. of Businesses: 114 % contribution to Income: 6.0	Q4.1— (allocated to multiple states) Business contacted for an estimate (Total Income > = \$100m) no. of Businesses: 292 % contribution to Income: 1.7		
	Q2.2—(allocated to a single state) Postcode used to allocate data to a state (Total Income < \$100m) no. of Businesses: 97 % contribution to Income: 0.5	Q4.2—(allocated to a single state) Employing no. of Businesses: 394,955 % contribution to Income: 32.4 Non-employing no. of Businesses: 1,020,000 % contribution to Income: 5.0		

^{*} Identified using the multi-state indicator on the ABS Business Register

Single State Businesses

19 Non-employing businesses (Q4.2) were allocated to a single state using the business operations postcode obtained from the business income tax files. A small number of non-employing businesses had illegal or missing postcodes. These businesses were allocated across the states on a proportional basis.

Single State Businesses continued

Multi-state businesses

- **20** Employing businesses identified as operating in only one state on the ABS Business Register and where no match was found to an ABS direct collection were divided into two groups (Q4.1 & Q4.2). Those businesses with income of less than \$100m (Q4.2) were allocated to a state using their business operations postcode on the ABS Business Register and those businesses with income of \$100m or more (Q4.1) were investigated to determine the state/s of operation and to obtain proportions across states.
- **21** One of the most difficult aspects of the production of state level estimates was the correct treatment of businesses that received income or paid wages in more than one state. In 2000–01, of the 417,938 employing businesses, 2,048 businesses (Q1, Q2.1 and Q2.2) were identified as multi-state businesses from the ABS Business Register. These businesses contributed 35.7% of the Total operating income estimate at the Australian level
- **22** ABS economic collections with similar concepts to the EAS collection ask businesses a variety of state-based questions. In order of relevance, the ABS collections used to obtain state proportions for Sales and Wages for employing businesses were:
 - Manufacturing Survey
 - Mining Survey
 - Quarterly Economic Activity Survey (QEAS)
 - Retail Industry Survey (RIS)
 - Wholesale Industry Survey (WIS)
 - Service Industries Survey (SIS)
 - Economic Activity Survey (EAS)
 - Survey of Business Expectations.
- **23** From the EASTAX collection, 22,480 employing businesses were matched to the ABS direct collections listed above. If a business matched to more than one direct collection, the source with the highest relevance was used.
- **24** Of the 2,048 multi-state businesses identified from the ABS Business Register, state dissections for 1,837 businesses (89.7%) were obtained from ABS direct collections. Of these businesses, the majority were matched to the Manufacturing, Mining and Quarterly Economic Activity Survey collections. The remaining units matched across the other listed collections.
- **25** Some bias may be present in relation to obtaining state dissections from various ABS collections with different reporting periods, definitions and scope. Please refer to the Explanatory Notes for further information.
- **26** Of the large multi-state businesses, 90% of these units were matched. Businesses identified as multi-state and single state businesses which did not match to an ABS direct collection were investigated (sometimes involving contact with the business) if the Total operating income of the business was \$100m or more (Q2.1 & Q4.1).
- **27** Multi-state and single state employing businesses, for which no match was found, with Total income less than \$100m were allocated to the state of their postcode on the ABS Business Register (Q2.2 & Q4.2).
- **28** Sales proportions obtained for each business were used to apportion EASTAX Total operating income, Total operating expenses and OPBT data across the states for that business. Similarly, wages proportions were used to apportion Labour costs across the states.

Matching multi-state businesses to ABS direct collections

TECHNICAL NOTE 2 LIMITATIONS OF FINANCIAL DATA ANALYSIS

RELATIVE STANDARD FRROR

- **1** Since the estimates in this publication are based on information obtained from a sample drawn from units in the surveyed population, the estimates are subject to sampling variability. That is, they may differ from the figures that would have been produced if all units had been included in the survey.
- **2** One measure of the likely difference is given by the standard error (SE), which indicates the extent to which an estimate might have varied by chance because only a sample of units was included. The relative standard error (RSE) provides an immediate indication of the percentage errors likely to have occurred due to sampling, and thus avoids the need to refer to the size of the estimate. Tables 3.1 on pages 21–33 and tables 3.6, 3.7 and 3.8 on pages 43–44, provide RSEs for a selection of estimates presented in this publication.
- 3 The relatively small sample size of the EAS (directly collected) collection does not allow for the compilation of reliable estimates generally below the ANZSIC subdivision level. However, by utilising the very large tax based sample it is possible to produce ANZSIC class level estimates. One of the measures of quality of the class level estimates are the relative standard errors (RSEs) contained in table 3.1. Approximately 88% of the ANZSIC class level estimates have RSEs of 25% or less. Some of the RSEs, are relatively large and therefore the estimates to which they relate should be used with extreme caution.
- 4 There are about two chances in three that the difference between the estimate shown and the true value will be within one SE, and about 19 chances in 20 that the difference will be within two SEs. Thus, for example, if the estimated value of a variable is \$12,000m and its RSE is 5%, its quality in terms of sampling error can be interpreted as follows. There are about two chances in three that the true value of the variable lies within the range \$11,400m to \$12,600m, and 19 chances in 20 that it lies within the range \$10,800m and \$13,200m.
- 5 The size of the RSE may be a misleading indicator of the quality of some of the estimates for Operating profit before tax (OPBT). This situation may occur where an estimate may legitimately include positive and negative values reflecting the financial positions of different business entities. In these cases the aggregate estimate can be small relative to the contribution of individual business entities, resulting in a SE which is large relative to the estimate.
- **6** The EASTAX sample is not selected on the basis of state and this could have an impact on the size of the sampling error at the state level. To some extent this is offset by the use of business income tax data which increases the sample size, resulting in a broader coverage of units for each state.

NON-SAMPLING ERROR

7 The imprecision due to sampling variability, which is measured by the SE, is not to be confused with inaccuracies that may occur because of inadequacies in available sources from which the population frame was compiled, imperfections in reporting by providers, errors made in collection such as in recording and coding data, and errors made in processing data. Inaccuracies of this kind are collectively referred to as non-sampling error and they may occur in any enumeration, whether it be a full count or a sample.

NON-SAMPLING ERROR continued

- **8** While it is not possible to quantify non-sampling error, every effort is made to reduce it to a minimum. Collection forms are designed to be easy to complete and assist businesses to report accurately. Efficient and effective operating procedures and systems are used to compile the statistics.
- **9** There are also non-sampling errors associated with the ATO business income tax file. For example, the ATO accounts for non-response in the business income tax file by either bringing forward the previous year's data for a non-responding business, or leaving the data as zero if the business does not have an ATO response history.
- **10** Differences in accounting policy and practices across businesses and industries can also lead to some inconsistencies in the data used to compile the estimates. While much of the accounting process is subject to standards, there remains a great deal of flexibility available to businesses in the accounting policies and practices they adopt.
- **11** Chapter 3: Experimental estimates, contains experimental estimates at the ANZSIC class level. This is the finest level of classification in the ANZSIC. It is only the incorporation of ATO business income tax data that has made it feasible to produce estimates at this level of detail.
- **12** The class level estimates in this publication can sometimes be different to the class level estimates produced by the Service Industries program of surveys which focus on fine level detail for a given ANZSIC class. In most cases the differences are due to differences in scope and coverage. However, differences can occur due to inconsistencies in ANZSIC coding on the *ABS Register of Businesses*, ANZSIC coding on the ATO Business Income Tax file and ANZSIC coding undertaken as part of the Service Industries program.
- 13 Chapter 3 also contains state experimental estimates. Users should be aware that because direct collection has not been used to apportion EASTAX estimates to states, some non-sampling error will result from the techniques used. For full details of the methodology used to allocate estimates to states please refer to the Technical Note 1: Methodology.
- **14** The above limitations are not meant to imply that analysis based on this data should be avoided, only that they should be borne in mind when interpreting the data presented in this publication.
- **15** This publication presents a wide range of data that can be used to analyse business and industry performance.
- **16** It is important that any analysis be based upon the range of data presented rather than focusing on one variable.

GLOSSARY

ANZSIC The Australian and New Zealand Standard Industrial Classification (cat. no. 1292.0).

Business entities A term used in this publication to describe the combination of business units from the

Economic Activity Survey and the business units provided by the ATO.

Business Register A list of businesses maintained by the ABS and used for creating survey frames for ABS

business surveys.

Economic Activity Survey (EAS) An annual business survey conducted by the ABS which is one of the sources of the

estimates presented in this publication.

EASTAX Estimates derived by combining (a) data directly collected via the ABS Economic Activity

Survey in respect of selected industries with (b) business income tax data provided by

the ATO.

Financial expenses Includes bad debts, interest expenses, bank charges other than interest and insurance

premiums.

Income from services Includes repair, maintenance and service income and fees, income from work done or

sales made on a commission basis, delivery or installation charges which are invoiced separately to customers, advertising income and management fees/charges from related or unrelated businesses. As a result of revised international standards, income from royalties from intellectual property are also a component of estimates of income from services commencing with estimates for 1997–98. Excluded are rent, leasing and hiring income, government bounties and subsidies, income from natural resource royalties,

interest income and dividends.

Interest income Includes interest received from bank accounts, loans and finance leases and earnings on

discounted bills.

Labour costs Wages and salaries plus employers contributions to superannuation funds plus workers'

compensation costs.

Management Unit The largest type of unit within an enterprise group which controls its productive

activities and for which separate accounts are kept.

Multi-state businesses Those businesses with operations in more than one state or territory.

Operating business See under Statistical unit in Explanatory Notes.

Operating profit before tax A measure of profit before extraordinary items are brought into account and prior to the

deduction of income tax and appropriations to owners (e.g. dividends paid). OPBT in this publication is simply calculated as Total operating income minus Total operating expenses. Other definitions include change in stocks, but this information was not

available for this report.

Total operating income

less Total operating expenses

less Opening stocks

plus Closing stocks

equals OPBT

(OPBT)

advertising, freight and cartage, repair and maintenance, other management and administrative, travelling and accommodation, sales commission, paper, printing and stationary, audit and other accounting, cleaning, royalties, legal, data processing and other expenses as well as commission expenses on own material and land tax and rates.

Other selected income Includes royalty income, insurance recoveries, subsidies, employee contributions for

fringe benefits tax, government assistance from all sources, distribution from

partnerships and trusts and gross dividends.

Other service industries Comprises Education, Community service and religious organisations, Interest groups (trade

unions, industry associations, etc.) and Public order and safety services.

Purchases Includes purchases of materials, components, containers, packaging, fuels, electricity

and water, and purchases of goods for resale.

Rent, leasing and hiring Costs for the rent, leasing (excluding finance leases) of vehicles, land, buildings,

machinery, equipment and any other property to other businesses or individuals.

Includes sales of goods whether or not manufactured by the business and sales or

Rent, leasing and hiring Includes income received from the renting, leasing or hiring of assets such as land,

income buildings, vehicles, machinery or equipment to other businesses or individuals.

transfers to related businesses.

expenses

Sales of goods

Selected industries Comprises the following industries: Mining; Manufacturing; Electricity, gas and water

SUPPLY; CONSTRUCTION; WHOLESALE TRADE; RETAIL TRADE; ACCOMMODATION, CAFES AND RESTAURANTS; TRANSPORT AND STORAGE; COMMUNICATION SERVICES; PROPERTY AND BUSINESS SERVICES; CULTURAL AND RECREATIONAL SERVICES and Selected ANZSIC classes in the Health, Personal Services and

FINANCE AND INSURANCE industries.

Single state businesses Those businesses with operations in one state or territory only.

Total operating expenses The total expenses of a business, excluding extraordinary items.

Total operating income The total income of a business, excluding extraordinary items.
