| ABOUT THIS PUBLICATION | This publication presents estimates of the economic and financial performance of Australian industry for 2011-12. These estimates are compiled from Economic Activity Survey (EAS) conducted by the Australian Bureau of Statistics (ABS) and from Business Activity Statement (BAS) data reported to the Australian Taxation Office (ATO). <br> The estimates in this publication are based on the Australian and New Zealand Standard Industrial Classification (ANZSIC), 2006 edition (cat. no. 1292.0). |
| :---: | :---: |
| OFF-JUNE YEAR REPORTING IN EAS | The 2011-12 EAS has a reference period ending 30 June 2012 and the majority of businesses report for this reference period. In some industries though, a substantial proportion report for a different reference period, for example the reference period ending 31 May 2012. "Off-June year reporting" is more prevalent in industries with a high degree of foreign ownership, such as Mining and Manufacturing. <br> Experimental estimates on the impacts of off-June year reporting have been released in Experimental Estimates for Australian Industry adjusted for Off-June Year reporting 2010-11 (cat.no.8169.0). Estimates for 2011-12 will be released in late 2013. |
| CHANGES IN THIS ISSUE | Previous issues of Australian Industry were accompanied by a Mining Commodities data cube. This data cube will now appear in Mining Operations, Australia, 2011-12 (cat. no. 8415.0) along with other detailed Mining Industry data. Mining Operations, Australia, 2011-12 will be released on 31 May, 2013. |
| INDUSTRY PROFILES | The ABS conducts a rotating program of detailed industry surveys. For the 2011-12 financial year, the ABS undertook surveys into the Construction industry (ANZSIC Division E) and Film, Television and Digital Games industries (part ANZSIC Division J). The data from these surveys will be released by the ABS (in cat. nos. 8772.0 and 8679.0 respectively) during June, 2013. For 2012-13, the ABS will be conducting surveys into Wholesale and Retail Industries (ANZSIC Divisions F and G respectively), and these results are expected to be released in mid 2014 (cat. no. 8622.0). |
| COMMENTS | The ABS welcomes comments and suggestions from users regarding future releases of Australian Industry. These comments should be addressed to the Director, Annual Integrated Collections Business Statistics Centre, Australian Bureau of Statistics, GPO Box 2796Y, Melbourne, VIC 3001. |
| INQUIRIES | For further information about these and related statistics, contact the National Information and Referral Service on 1300135070. |

## chapter 1

## INTRODUCTION

KEY DATA

LABOUR COSTS

INDUSTRY VALUE ADDED

This chapter contains summary information about selected key data, labour costs and industry value added (IVA). Chapter 2 presents selected key data by business size, together with measures of the performance of Australian industries. Chapter 3 presents information on employment, wages and salaries, and sales and service income by industry in Australian states and territories.

Between 2010-11 and 2011-12 for Total selected industries, total income and total expenses increased by $6.4 \%$ (or $\$ 176.9 \mathrm{~b}$ ) and $6.7 \%$ (or $\$ 163.0 \mathrm{~b}$ ) respectively. IVA increased by $7.3 \%$ (or $\$ 68.9$ b) over the same period. Operating profit before tax (OPBT) increased by $5.0 \%$ (or $\$ 17.0 \mathrm{~b}$ ).

Only one industry in Total selected industries recorded a decrease in total income, Information, media and telecommunications, which declined by $2.1 \%$ (or \$1.6b). Wholesale trade and Construction recorded the largest absolute increases in total income, with $\$ 45.9 \mathrm{~b}$ and $\$ 21.0 \mathrm{~b}$ respectively.

All eighteen selected industries recorded increases in total expenses. Mining recorded the largest percentage increase with $16.5 \%$ (or by $\$ 22.2 \mathrm{~b}$ ).

OPBT for Total selected industries increased by $\$ 17.2$ b between 2010-11 and 2011-12. Accommodation and food services recorded a $44.7 \%$ (or $\$ 2.9$ b) increase, while Administrative and support services experienced a $37.0 \%$ (or $\$ 3.2 \mathrm{~b}$ ) drop in OPBT. Mining was the largest contributor to OPBT in 2011-12, accounting for 23.0\% (or \$83.7b).

Employment for Total selected industries increased by 185,557 persons (or $1.8 \%$ ). Professional, scientific and technical services increased by 80,000 employees (or 8.7\%), whereas Retail trade experienced a decrease of 46,000 persons. The largest contributors to employment were Retail trade and Construction, accounting for 12.1\% (or 1,300,148 persons) and $9.7 \%$ (or 1,042,714 persons) respectively.

During 2011-12, total labour costs for Total selected industries were $\$ 543.8 \mathrm{~b}$ of which wages and salaries accounted for $87.1 \%$ (or $\$ 473.9$ b). The industries with the highest total labour costs were Professional, scientific and technical services (\$69.5b) and Manufacturing (\$64.3b).

IVA for Total Selected industries increased by $7.3 \%$, or $\$ 68.9$ b, between 2010-11 and 2011-12.

The largest contributing industry in 2011-12 was Mining, accounting for 13.1\% (or $\$ 133.0 \mathrm{~b}$ ) of the estimate for Total selected industries, followed by Professional, scientific and technical services ( $10.2 \%$ or $\$ 103.7 \mathrm{~b}$ ) and Manufacturing ( $10.1 \%$ or $\$ 102.1 \mathrm{~b}$ ).

## CHAPTER 2

INDUSTRY PERFORMANCE

## INTRODUCTION <br> INCOME AND <br> EXPENDITURE

PROFITABILITY AND
EARNINGS

NDUSTRY ANALYSIS

Mining

Statistics in this chapter relate to the performance of Australian industry at the industry division level, as defined by the Australian and New Zealand Standard Industrial Classification (ANZSIC), 2006 edition. ANZSIC Division K Financial and insurance services is excluded from the scope of the statistics. Division $K$ data can be found in the Appendix. Aggregates excluding this industry are presented at the Total selected industries level. Please note that Public administrative and safety, Education and training, and Health care and social assistance, where shown (or included in totals) in this publication, exclude any public sector components.

The data presented include all activities of businesses classified to each industry, some of which may be activities other than those normally associated with that industry. Explanatory Notes paragraphs 14-15 provide further details

During 2011-12, total income for Total selected industries was $\$ 2960.5$ b of which small businesses accounted for $30.7 \%$ (or $\$ 909.9$ b), medium businesses $26.2 \%$ (or $\$ 775.4 \mathrm{~b}$ ) and large businesses $43.1 \%$ (or $\$ 1275.2 \mathrm{~b}$ ).

Sales and service income accounted for 94.2\% (or \$2789.1b) of total income.
For the same period, total expenses of Total selected industries was $\$ 2607.7 \mathrm{~b}$ of which total purchases accounted for $\mathbf{4 5 . 2 \%}$ (or $\$ 1,177.8$ b) and selected labour costs (excluding the drawings of working proprietors) accounted for a further 20.1\% (or \$524.3b).

Operating profit before tax (OPBT) for Total selected industries in 2011-12 was $\$ 363.5 \mathrm{~b}$. The percentage contribution by small businesses was $44.6 \%$ (or $\$ 161.9$ b). This result can be explained by the inclusion of non-employing businesses in the small business population. Specifically, these non-employing businesses are large in number and include working proprietors and partners for which the salaries and/or drawings are not reflected in estimates of business expenses.

An analysis of performance for a selection of industries follows.

In 2011-12, Mining was the largest contributor to Total selected industries OPBT and IVA, accounting for $23.0 \%$ (or $\$ 83.7 \mathrm{~b}$ ) and $13.1 \%$ (or $\$ 133.0 \mathrm{~b}$ ) respectively.

Between 2010-11 and 2011-12, the industry's OPBT decreased by $1.8 \%$ (or $\$ 1.6 \mathrm{~b}$ ) while IVA increased by $5.0 \%$ (\$6.3b).

During 2011-12, Mining had the highest profit margin with $38.3 \%$, and the highest levels of capital expenditure ( $\$ 86.8 \mathrm{~b}$ or $32.3 \%$ ) of all the selected industries.

During 2011-12, Manufacturing accounted for $10.1 \%$ (or $\$ 102.1 \mathrm{~b}$ ) of Total selected industries IVA

```
CHAPTER 2 • INDUSTRY PERFORMANCE
```

Manufacturing continued Between 2010-11 and 2011-12, total income in Manufacturing increased by 2.2\% (from $\$ 395.8 \mathrm{~b}$ to $\$ 404.5 \mathrm{~b}$ ) while total expenses increased by $3.6 \%$ (from $\$ 369.8 \mathrm{~b}$ to $\$ 383.3 \mathrm{~b}$ )

For the same period, OPBT decreased by $16.4 \%$ (from $\$ 28.2 \mathrm{~b}$ to $\$ 23.5 \mathrm{~b}$ )

Electricity, gas, water and WASTE SERVICES

Construction

Wholesale trade

Retail trade

INFORMATION MEDIA AND
ELECOMMUNICATIONS

Between 2010-11 and 2011-12, Total income for Electricity, gas, water and waste services increased by $5.7 \%$ (from $\$ 101.6 \mathrm{~b}$ to $\$ 107.5 \mathrm{~b}$ ) while total expenses increased by $7.4 \%$ (from $\$ 89.4 \mathrm{~b}$ to $\$ 96.0 \mathrm{~b}$ )

Construction employed 1,042,714 persons during 2011-12, which represented $9.7 \%$ of Total selected industries employment.

For the same period, Construction total income was $\$ 324.9 \mathrm{~b}$ which represented $11.0 \%$ of Total selected industries total income.

During 2011-12, Wholesale trade was the largest contributor of all selected industries to total income accounting for $16.2 \%$ (or $\$ 478.3 \mathrm{~b}$ ) and total expenses with $17.8 \%$ (or \$463.1b).

Between 2010-11 and 2011-12, total income in Wholesale trade increased by 10.6\% (from $\$ 432.5$ b to $\$ 478.3 \mathrm{~b}$ ). For the same period, total expenses increased $10.9 \%$ (from $\$ 417.5 \mathrm{~b}$ to $\$ 463.1 \mathrm{~b}$ )

Wholesale trade was the largest contributor to sales and service income accounting for $17.0 \%$ (or $\$ 473.2 \mathrm{~b}$ ) of Total selected industries.

Retail Trade employed 1,300,148 persons in 2011-12 and was the highest contributor to Total selected industries employment, accounting for 12.1\%.

Between 2010-11 and 2011-12 employment in Retail Trade decreased 3.4\% (or 45,429 persons).

For the same period, total income and total expenses in Retail trade increased by $2.4 \%$ (or \$9.1b) and 2.0\% (or \$7.0b) respectively

Information media and telecommunications employed 176,058 persons during 2011-12 which was a decrease of $2.4 \%$ ( 4,255 persons) from 2010-11.

Between 2010-11 to 2011-12, total income in Information media and telecommunications decreased by $2.1 \%$ (from $\$ 77.2 b$ to $\$ 75.6 b$ ).

## CHAPTER 3

STATES, TERRITORIES AND AUSTRALIA

STATE AND TERRITORY ESTIMATES

The map below illustrates each state or territory's share of employment (at end June 2012), wages and salaries and sales and service income, relative to Total selected industries in 2011-12. In addition, the population share for each state and territory has also been provided (as at 30 June 2012). Whilst the key economic indicators for most states and territories were commensurate with the population distribution, the exception was Western Australia, where sales and service income accounted for $16.3 \%$ (or $\$ 454.8 \mathrm{~b}$ ) of the national total relative to a population share of $10.7 \%$. In nominal terms, sales and service income in Western Australia grew from $\$ 353.3 \mathrm{~b}$ in 2009-10 to $\$ 454.8$ b in $2011-12$, an increase of $28.7 \%$ (or $\$ 101.5$ b). The industries driving this growth included Mining (up $62.0 \%$ or $\$ 46.4 \mathrm{~b}$ ) and Wholesale trade (up $37.6 \%$ or $\$ 16.5 \mathrm{~b}$ ).

STATE / TERRITORY CONTRIBUTION TO TOTAL SELECTED INDUSTRIES(a), 2011-12

(a) See Technical Note 1 paragraph 9.
(b) As at 30 June 2012, Australian Demographic Statistics, Sep 2012, (cat. no. 3101.0)

The Mining industries in New South Wales and Queensland also experienced growth over the 2009-10 to 2011-12 period, with sales and service income increasing by $39.4 \%$ (or $\$ 8.1 b)$ and $24.7 \%$ (\$9.5b) respectively.

```
CHAPTER 3 • STATES, TERRITORIES AND AUSTRALIA
```

STATE AND TERRITORY
ESTIMATES continued

Retail trade continued to be the biggest employer in most states, although decreases were recorded in all jurisdictions except South Australia and the Australian Capital Territory between June 2011 and June 2012. Similarly, overall employment in the Construction industry was down on June 2011. However, employment growth was recorded in Queensland, Western Australia, Northern Territory and Australian Capital Territory.

Between 2010-11 and 2011-12, increases in expenditure on wages and salaries were led by Northern Territory (up $18.8 \%$ or $\$ 771 \mathrm{~m}$ ), Western Australia (up $14.4 \%$ or $\$ 8.6 \mathrm{~b}$ ) and Queensland (up $10.1 \%$ or $\$ 8.5$ b). Mining industry expenditure on wages and salaries in these jurisdictions increased by $15.5 \%$ (or $\$ 60.0 \mathrm{~m}$ ), $30.4 \%$ (or $\$ 2.6 \mathrm{~b}$ ) and $25.5 \%$ (or $\$ 1.2 \mathrm{~b}$ ) respectively.

## EXPLANATORY NOTES

1 This publication presents estimates of the economic and financial performance of Australian industry in 2011-12. The estimates are produced annually using a combination of directly collected data from the annual Economic Activity Survey (EAS), conducted by the Australian Bureau of Statistics (ABS), and Business Activity Statement (BAS) data provided by businesses to the Australian Taxation Office (ATO).

2 The period covered by the collection is, in general, the 12 months ended 30 June. Where businesses are unable to supply information on this basis, an accounting period for which data can be provided is used for data other than those relating to employment. Such businesses make a substantial contribution to some of the estimates presented in this publication. As a result, the estimates can reflect trading conditions that prevailed in periods outside the twelve months ended June in the relevant year.

3 Although financial estimates relate to the full 12 months, employment estimates relate to the last pay period ending in June of the given year. As a result, estimates of wages and salaries per person employed may be affected by any fluctuations in employment during the reference period.

4 Financial data incorporate all units in scope of the EAS that were in operation at any time during the year. They also include any temporarily inactive units, i.e. those units which were in the development stage or were not in operation, but still existed and held or acquired assets and liabilities and/or incurred some non-operating expenses (e.g. depreciation, administration costs).

5 The businesses that contribute to the statistics in this publication are classified:

- by institutional sector, in accordance with the Standard Institutional Sector Classification of Australia (SISCA), which is detailed in Standard Economic Sector Classifications of Australia (SESCA) (cat. no. 1218.0)
- by industry, in accordance with the Australian and New Zealand Standard Industrial Classification (ANZSIC), 2006 edition (cat. no. 1292.0)
- by state and territory
- by business size.

6 The scope of the collection consists of all business entities operating in the Australian economy during 2011-12, except for:

- in most industries, entities classified to SISCA Sector 3 General government. This exclusion particularly affects data presented for Public administration and safety, Education and training and Health care and social assistance (anZZIC Divisions O, P and Q respectively), in that the estimates relate only to private sector businesses. Note, however, that SISCA Sector 3 General government businesses classified to Water supply, sewerage and drainage services (ANZSIC Subdivision 28, within Division D) are included - that is, data for relevant local government organisations (for example) are included in the estimates.
- entities classified to ANZSIC Subdivisions 62 Finance and 63 Insurance and superannuation funds. Note that estimates included in this publication for Total selected industries exclude ANZSIC Subdivision 64 Auxiliary finance and insurance services. Experimental estimates for this subdivision are presented in the Appendix of this issue.
- entities classified to ANZSIC Subdivisions 75 Public administration, 76 Defence and 96 Private households employing staff and undifferentiated goods- and service- producing ACTIVITIES OF HOUSEHOLDS FOR OWN USE.

7 Government-owned or controlled Public Non-Financial Corporations are included.
8 This section discusses frame, statistical units, coverage issues and improvements to coverage.

9 Businesses contributing to the estimates in this publication are sourced from the ABS Business Register (ABSBR), which has two components as described below.

10 The ABS uses an economic statistics units model on the ABSBR to describe the characteristics of businesses and the structural relationships between related businesses. Within large and diverse business groups, the units model is used to define reporting units that can provide data to the ABS at suitable levels of detail.
11 In mid 2002, the ABS commenced sourcing its register information from the ABR and at that time changed its business register to a two population model. The two populations comprise what is called the Profiled Population and the Non-Profiled Population. The main distinction between businesses in the two populations relates to the complexity of the business structure and the degree of intervention required to reflect the business structure for statistical purposes.

NON-PROFILED POPULATION
12 The majority of businesses included on the ABS Business Register are in the Non-Profiled Population. Most of these businesses are understood to have simple structures. For these businesses, the ABS is able to use the ABN as the basis for a statistical unit. One ABN equates to one statistical unit.

PROFILED POPULATION
13 For a small number of businesses, the ABN unit is not suitable for ABS economic statistics purposes and the ABS maintains its own units structure through direct contact with businesses. These businesses constitute the Profiled Population. This population consists typically of large or complex groups of businesses. The statistical units model below caters for such businesses:

- Enterprise group: This is a unit covering all the operations in Australia of one or more legal entities under common ownership and/or control. It covers all the operations in Australia of legal entities which are related in terms of the current Corporations Law (as amended by the Corporations Legislation Amendment Act 1991), including legal entities such as companies, trusts and partnerships. Majority ownership is not required for control to be exercised.
- Enterprise: The enterprise is an institutional unit comprising:
- a single legal entity or business entity, or
- more than one legal entity or business entity within the same enterprise group and in the same institutional subsector (i.e. they are all classified to a single Standard Institutional Sector Classification of Australia (SISCA) subsector).
- Type of activity unit (TAU): The TAU is comprised of one or more business entities, sub-entities or branches of a business entity within an enterprise group that can report production and employment data for similar economic activities. When a minimum set of data items is available, a TAU is created which covers all the operations within an industry subdivision (and the TAU is classified to the relevant subdivision of the ANZSIC). Where a business cannot supply adequate data for each industry, a TAU is formed which contains activity in more than one industry subdivision.

14 The ANZSIC-based industry statistics presented in this publication are compiled differently from activity statistics. Each ABN unit or TAU on the ABSBR has been classified (by the ATO and the ABS respectively) to its single predominant industry class, irrespective of any diversity of activities undertaken.

15 Some businesses engage, to a significant extent, in activities which are normally carried out by different industries. For example, a predominantly mining business may also undertake significant amounts of manufacturing. Similarly, a mining business may produce significant volumes of goods which are normally produced in different mining industries. Where a business makes a significant economic contribution to industries classified to different ANZSIC subdivisions, the ABS includes the business in the Profiled Population, and 'splits' the TAU's reported data between the industries involved. Significance is determined using total income.

16 A TAU's reported data are split if the inclusion of data relating to the secondary activity, in the statistics of the industry of the primary activity, distorts (by overstating or understating) either the primary or secondary industry statistics at the ANZSIC subdivision level by:

- $3 \%$ or more, where the industries of the primary and secondary activities are in the same ANZSIC division
- $2 \%$ or more, where the industries of the primary and secondary activities are in different ANZSIC divisions.

17 The ABS attempts to maintain a current understanding of the structure of the large, complex and diverse business groups that form the Profiled Population on the ABSBR, through direct contact with those businesses. Resultant changes in their structures on the ABSBR can affect:

- the availability of such businesses (or units within them) for inclusion in the annual economic collections
- the delineation of the units, within those groups, for which data are to be reported.

18 The ABS attempts to obtain data for those businesses selected for direct collection and which ceased operation during the year but it is not possible to obtain data for all such businesses.

19 Data in this publication have been adjusted to allow for lags in processing new businesses to the ABSBR, and the omission of some businesses from the register. The majority of businesses affected, and to which the adjustments apply, are small in size. As an example, the effect of these adjustments is generally $4 \%$ or less for most ANZSIC industry divisions and for most states and territories.

20 Adjustments have been made to include new businesses in the estimates for the period in which they commenced operation, rather than when they were processed to the ABSBR. Adjustments of this type will continue to be applied in future periods.

21 For more information on these adjustments, please refer to the ABS publication Information Paper: Improvements to ABS Economic Statistics, 1997 (cat. no. 1357.0).

22 Selected key terms are described below.
23 This publication presents a wide range of data that can be used to analyse business and industry performance.

24 Differences in accounting policy and practices across businesses and industries can lead to some inconsistencies in the data input to the statistics. Although much of the accounting process is subject to standards, there is still a great deal of flexibility left to individual managers and accountants through the accounting policies and practices they adopt. For example, the way profit is measured is affected by management policy about such issues as depreciation rates, bad debt provisions and write off, and goodwill write

Industry performance
measures continued

Industry value added

AUSTRALIAN INTERNATIONAL FINANCIAL REPORTING STANDARDS
off. The varying degree to which businesses consolidate their accounts may also affect any industry performance measures calculated.

25 A range of performance measures, usually referred to as ratios, can be produced from the data available from businesses' financial statements. The performance measures presented in this publication comprise:

- profitability ratios, which measure rates of profit on sales
- debt ratios, which indicate the ability of businesses to meet the cost of debt financing
- investment ratios, which indicate the capacity of business to invest in capital assets
- labour measures, which relate output, labour costs and employment.

26 The above limitations are not meant to imply that analysis based on these data should be avoided, only that they should be borne in mind when interpreting the data presented in this publication.

27 Industry value added (IVA) is the measure of the contribution by businesses in each industry to gross domestic product. The IVA table presents estimates of the components of IVA for all industries that are within the scope of the collection.

28 There are two types of businesses: 'market' and 'non-market' producers. Market producers sell their output to achieve a profit, whereas non-market producers sell their output at economically insignificant prices. IVA is derived differently for market and non-market producers. The industries in which non-market producers make the most significant contribution to IVA are Health care and social assistance (private) and Other services. See the Glossary definition of IVA for further detail.

29 The new Australian equivalents to International Financial Reporting Standards (AIFRS) were progressively implemented in Australia from 1 January 2005. As a result, a number of items in the financial accounts of Australian businesses have been affected by changed definitions, which have in turn affected both income statements and balance sheets. A range of ABS economic collections source data from financial accounts of businesses and use those data to derive economic statistics. There have been no changes in the associated economic definitions.

30 Since the implementation of AIFRS, analysis of published time series data has indicated structural breaks in series. The magnitude of such breaks, however, cannot be determined without imposing a disproportionate load upon data providers to ABS surveys and other administratively collected data. The ABS will continue to monitor developments and report any significant identified impacts as a result of AIFRS.

31 In order to minimise the load placed on providers, the strategy for this survey was to use, as much as possible, information sourced from the ATO, thus reducing the size of the direct collect sample needed to maintain the range and quality of information available to users of statistical data. The frame (from which the direct collect sample was selected) was stratified using information held on the ABSBR. Businesses eligible for selection in the direct collect sample were then selected from the frame using stratified random sampling techniques.

32 Businesses were only eligible for selection in the survey (the direct collect sample) if their turnover exceeded a threshold level, or the business was identified as being an employing business (based on ATO information), as at the end of the reference period. Turnover thresholds were set for each ANZSIC class so that the contribution of surveyed businesses accounted for approximately $97.5 \%$ of total industry class turnover as determined by Business Activity Statement (BAS) data. A sample of 20,207 businesses was selected for the directly collected part of the 2011-12 EAS. Each business was asked to provide data sourced primarily from financial statements, mainly by mail out

Revisions

Related publications

Other information available
questionnaires. Businesses were also asked to supply key details of their operations by state and territory, enabling production of the state/territory estimates,

33 Businesses which met neither of these criteria are referred to as 'micro non-employing businesses'. These businesses were not eligible for selection in the sample. For these units, BAS data were obtained and annualised, then added to the directly collected estimates to produce the statistics in this publication.

34 Where figures have been rounded, discrepancies may occur between totals and the sums of the component items.

35 Proportions, ratios and other calculated figures shown in this publication have been calculated using unrounded estimates and may be different from, but are more accurate than, calculations based on the rounded estimates.

36 In some cases estimates given in this publication may differ slightly from those from other sources. These differences may be the result of sampling or non-sampling error, or may result from differences in scope, coverage, definitions or methodology.

37 Estimates for the 2009-10 and 2010-11 reference years have been revised since the previous issue of this publication. The revisions result from the review of the new information received from the businesses in the direct collect sample and from improvements of the methodology used for producing the estimates for micro non-employing businesses. The revisions are incorporated in this publication and in the extended data spreadsheets available free online. Note that the extent of revisions may differ for individual industries and/or between data items.

38 For more information on improvements of the methodology used for producing the estimates for micro non-employing businesses, please refer to Technical Note 1.

39 A range of further information is available, as described below.
40 The following ABS publications present economy-wide and industry specific data:

- Australian System of National Accounts, 2011-12 (cat.no.5204.0) - Annual publication
- Business Indicators, Australia, December 2012 (cat.no.5676.0)- Quarterly publication
- Private New Capital Expenditure and Expected Expenditure, Australia, March 2012 (cat.no.5625.0) - Quarterly publication
- Experimental Estimates for Australian Industry adjusted for Off-June Year reporting 2011-12 (cat.no. 8169.0)
- Mining Operations, Australia, 2011-12 (cat.no.8415.0)
- Private Sector Construction Industry, 2011-12 (cat.no.8772.0).

41 Subdivision level estimates are available in the industry by subdivision data cubes on the ABS website. <www.abs.gov.au>: select Statistics / By Catalogue Number / 8. Secondary Industry and Distribution / 81. Industry Wide Statistics / 8155.0 Australian Industry, 2011-12, then select the Downloads tab.

42 Class level estimates for the Australian Manufacturing industry for 2010-11 and 2011-12 are released as a data cube on the web page for Australian Industry (cat. no. 8155.0).

43 Finer level estimates for the Australian Mining Industry for 2011-12 are expected to be released at the end of May, 2013 in Mining Operations, Australia, 2011-12 (cat. no. 8415.0)

44 The ABS also issues a daily Release Advice on its web site which details products to be released in the week ahead.

Other information available continued

Use of Australian Taxation Office (ATO) data in this publication

45 Inquiries should be made to the National Information and Referral Service on 1300135070.

46 ABS publications draw extensively on information provided freely by individuals, businesses, governments and other organisations. Their continued cooperation is very much appreciated; without it, the wide range of statistics published by the ABS would not be available. Information received by the ABS is treated in strict confidence as required by the Census and Statistics Act 1905.

47 The results of these studies are based, in part, on tax data supplied by the ATO to the ABS under the Income Tax Assessment Act 1936, which requires that such data are only used for statistical purposes. No individual information collected under the Census and Statistics Act 1905 is provided back to the ATO for administrative or regulatory purposes. Any discussion of data limitations or weaknesses is in the context of using the data for statistical purposes, and is not related to the ability of the data to support the ATO's core operational requirements.

48 Legislative requirements to ensure privacy and secrecy of these data have been followed. Only people authorised under the Australian Bureau of Statistics Act 1975 have been permitted to view data about any particular organisation and/or person in conducting these analyses. No information about individual taxpayers (persons) has been released to the ABS. Aggregated personal income tax data are confidentialised by the ATO before release to the ABS. In accordance with the Census and Statistics Act 1905, results have been confidentialised to ensure that they are not likely to enable identification of a particular person or organisation.

EXPERIMENTAL ESTIMATES FOR AUXILIARY FINANCE AND INSURANCE SERVICES

1 This appendix contains experimental estimates for Subdivision 64 Auxiliary finance and insurance services for 2009-10, 2010-11 and 2011-12.

2 The reference period, scope, coverage and survey design for the experimental estimates in this appendix are the same as those found throughout this publication. Further detail can be found in the Explanatory Notes.

3 The methodology for creating these experimental estimates is the same as for other industries in this publication. See Technical Note 1 for detailed information.

4 The data quality of this time series is susceptible to sampling and non-sampling errors, as per Technical Note 2. The relative standard errors for the 2011-12 experimental estimates for subdivision 64 Auxiliary finance and insurance serices are sales and service income (3.9\%), total income (4.2\%), wages and salaries (2.9\%), total expenses (3.3\%) and industry value added (5.3\%).

5 The estimates in this appendix are considered experimental and are still subject to evaluation and therefore should be used with caution.

## TECHNICAL NOTE 1 ESTIMATION METHODOLOGY

## INTRODUCTION

ESTIMATION METHODOLOGY

PRODUCING ESTIMATES

1 The availability of Business Activity Statement (BAS) data collected by the Australian Taxation Office (ATO) has provided the Australian Bureau of Statistics (ABS) with opportunities to improve the efficiency of collection designs and estimation for its business surveys, while at the same time reducing the reporting burden placed on businesses. Under taxation law, data may be passed by the Commissioner for Taxation to the ABS for specified statistical purposes. Accordingly, turnover and wages information sourced from ATO BAS data was used to improve the accuracy of the 2011-12 industry estimates which were produced using data items collected directly by the ABS from businesses.

2 The 2011-12 survey continues to use generalised regression estimation, first introduced in the 2006-07 survey. This estimation method enables maximum use of observed linear relationships between data directly collected from businesses in the survey and auxiliary information. When the auxiliary information is strongly correlated with data items collected in a survey, the generalised regression estimation methodology will improve the accuracy of the estimates. The auxiliary variables used in this survey were turnover and wages sourced from the BAS data of 1,963,294 businesses (including the direct collect sample).

3 The following diagram illustrates the ways in which Australian businesses contribute to the estimates in this publication.

Completely enumerated (CE) stream:

Generalised regression estimation stream:

Business Activity Statement
(BAS) stream:

10 State estimates were produced using both BAS data and survey data.

## TECHNICAL NOTE 2

Sampling error

RELIABILITY

1 The estimates in this release are based on information obtained from a sample survey (EAS) and from administrative data collected by the ATO. Any collection of data may encounter factors that impact the reliability of the resulting statistics, regardless of the methodology used. These factors result in non-sampling error. In addition to non-sampling error, sample surveys are also subject to inaccuracies that arise from selecting a sample rather than conducting a census. This type of error is called sampling error.

2 The majority of data contained in this publication have been obtained from a sample of businesses. As such, these data are subject to sampling variability; that is, they may differ from the figures that would have been produced if the data had been obtained from all businesses in the population. One measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because the data were obtained from only a sample of units. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all units had been included in the collection, and about nineteen chances in twenty that the difference will be less than two standard errors.
3 Sampling variability can also be measured by the relative standard error (RSE), which is obtained by expressing the standard error as a percentage of the estimate to which it refers. The RSE is a useful measure in that it provides an immediate indication of the percentage errors likely to have occurred due to the effects of random sampling, and this avoids the need to refer also to the size of the estimate. Selected data item RSEs at the industry division level for Australia are shown in the table overleaf. Detailed relative standard errors are available on request.

4 To illustrate, the estimate of total income for Manufacturing in 2011-12 was $\$ 404,485 \mathrm{~m}$. The RSE of this estimate is shown as $0.6 \%$, giving a standard error of approximately $\$ 2,427 \mathrm{~m}$. Therefore, there are two chances in three that, if all units had been included in the survey, a figure in the range of $\$ 402,058 \mathrm{~m}$ to $\$ 406,912 \mathrm{~m}$ would have been obtained, and nineteen chances in twenty (i.e. a confidence interval of $95 \%$ ) that the figure would have been within the range of $\$ 399,631 \mathrm{~m}$ to $\$ 409,339 \mathrm{~m}$.
5 The size of the RSE may be a misleading indicator of the reliability of the estimates for (a) operating profit before tax, (b) earnings before interest, tax, depreciation and amortisation and (c) industry value added. It is possible for an estimate legitimately to include positive and negative values, reflecting the financial performance of individual businesses. In this case, the aggregated estimate can be small relative to the contribution of individual businesses, resulting in a standard error which is large relative to the estimate.

|  |  <br> Salaries | Sales and service Income | Total Income | $\begin{array}{r} \text { Total } \\ \text { expenses } \end{array}$ | Industry value added |

Non-sampling error

## REFERENCE PERIOD

6 Error other than that due to sampling may occur in any type of collection, whether a full census or a sample, and is referred to as non-sampling error. All data presented in this publication are subject to non-sampling error. Non-sampling error can arise from inadequacies in available sources from which the population frame was compiled, imperfections in reporting by providers, errors made in collection, such as in recording and coding data, and errors made in processing data. It also occurs when information cannot be obtained from all businesses selected. The imprecision due to non-sampling variability cannot be quantified and should not be confused with sampling variability, which is measured by the standard error.

7 Although it is not possible to quantify non-sampling error, every effort is made to minimise it. Collection forms are designed to be easy to complete and assist businesses to report accurately. Efficient and effective operating procedures and systems are used to compile the statistics. The ABS compares data from different ABS (and non-ABS) sources relating to the one industry, to ensure consistency and coherence.
8 Differences in accounting policy and practices across businesses and industries can also lead to some inconsistencies in the data used to compile the estimates. Although much of the accounting process is subject to standards, there remains a great deal of flexibility available to individual businesses in the accounting policies and practices they adopt.

9 The above limitations are not meant to imply that analysis based on these data should be avoided, only that the limitations should be considered when interpreting the data. This publication presents a wide range of data that can be used to analyse business and industry performance. It is important that any analysis be based upon the range of data presented rather than focusing on one variable.

10 Where businesses were unable to supply data for the 12 months ended 30 June, an accounting period for which data can be provided is used for data other than those relating to employment.

11 Estimates of financial data in some industries, such as Mining and Manufacturing, are heavily impacted by fluctuating commodity prices. In these industries, reporting for an accounting period other than the year ended 30 June can result in estimates different from what they would have been, had the business reported for an accounting period ended 30 June.

12 In November 2011, the ABS released an information paper on the impact that businesses reporting for accounting periods other than those ended 30 June had on the estimates present in past versions of this release. In the second half of 2013, the ABS will release this paper updated to show the impact of off-June reporters on estimates presented in this release.

13 In the 2011-12 Economic Activity Survey, there was an $84.0 \%$ response rate from all businesses that were surveyed and found to be operating during the reference period. Data were imputed for the remaining $16.0 \%$ of operating businesses. This imputation contributed $10.6 \%$ to the estimate of sales and service income for Total selected industries.

## GLOSSARY

Data presented in this publication have been compiled from the standard financial accounts of businesses. Therefore, the definition of each reported item aligns closely with that adopted in standard business accounting practice. Included in the glossary are published data items and components used to calculate derived items.

Business A business is generally considered to be a person, partnership, or corporation engaged in business or commerce.

In this publication, the term represents the ABN unit or type of activity unit (TAU), which are the two standard statistical units for the 2011-12 EAS collections. For details, see Explanatory Notes paragraphs 12-13.

Business size Businesses are categorised as:

- large businesses, with employment of 200 or more persons
- medium businesses, with employment of 20 to less than 200 persons
- small businesses, with employment of less than 20 persons (including non-employing businesses).

Capital expenditure Total (gross) expenditure on acquiring fixed tangible and intangible assets, before deduction of trade-in allowances, and including expenses (except capitalised interest) incurred during the year in acquiring such assets. Fixed tangible assets include land, dwellings, other buildings and structures, plant, machinery and equipment (including motor vehicles). Intangible assets include capitalised exploration expenditure, patents, licences and goodwill.

Capital work done for own use

Capitalised purchases

Capitalised wages and salaries

Change in inventories
Closing inventories

Depreciation and amortisation Depreciation/amortisation allowed on tangible and intangible assets. Includes, for lessees only, depreciation/amortisation in respect of finance leases.

Disposal of assets Proceeds from the sale of tangible assets (plant, machinery, equipment, land, dwellings, other buildings and structures), and intangible assets (such as patents, licences and goodwill).

Profit prior to the deduction of net interest (interest income minus interest expenses), income tax, depreciation and amortisation. Items classifiable to other income are also excluded.

## Employer contributions into superannuation

## Employment at end of June

Fringe benefits tax

Funding from government for operational costs

Funding from government for specific capital items

## Gross fixed capital formation

 (GFCF)Includes all employer contributions to superannuation funds (including the employer productivity contribution) and provisions for employer contributions to superannuation funds. Also includes expenses relating to employer funded defined benefit schemes. Employee contributions and salary sacrifice contributions are excluded.

Number of persons working for businesses during the last pay period ending in June of the given year. Includes working proprietors and partners, employees absent on paid or prepaid leave, employees on workers' compensation who continue to be paid through the payroll, and contract workers paid through the payroll. Excludes persons paid by commission only, non-salaried directors, volunteers and self-employed persons such as consultants and contractors.

Fringe benefits tax is payable by employers when certain benefits in excess of normal wages or salaries (e.g. free or discounted goods or services) are received by their employees (or associates of employees) in connection with their employment.

Funding from federal, state and/or local government for operational costs (e.g. wages and salaries, rent, food). Includes bounties, subsidies, export grants, apprenticeship and traineeship schemes, community service obligations, and amounts reimbursed under fuel tax credits. Excludes funding from government for specific capital items.

Includes capital grants, and low interest or interest free loans made by government to businesses to encourage expenditure on specific equipment (e.g. environmental protection equipment).

Gross fixed capital formation is measured by the total value of a producer's acquisitions, less disposals, of fixed assets during the reference period, plus certain additions to the value of non-produced assets realised by the productive activity of businesses.

Fixed assets are tangible or intangible assets produced as outputs from processes of production that are themselves used repeatedly or continuously in other processes of production for more than one year.

The derivation of GFCF is as follows:
Acquisition of
Road vehicles
plus Other transport equipment
Industrial machinery and equipment
Computer software capitalised
Computers and computer peripherals
Electronic equipment and electrical machinery
Communications equipment
Other plant and equipment
Dwellings, other buildings and structures
Computer software expensed
Mining exploration expenditure written off
less Disposal of plant, machinery and equipment (including motor vehicles)
Disposal of dwellings, other buildings and structures
equals GFCF
Industry class The structure of ANZSIC comprises four levels, ranging from industry division (broadest level) to industry class (finest level). Activities are narrowly defined within the industry class level, which is identified by a four-digit code, e.g. Industry Class 1510 Pulp, paper and paperboard manufacturing. Usually, an activity is primarily defined to one class. However, some activities may be primary to more than one class.

## Industry division

 <br> \section*{\section*{Industry subdivision <br> \section*{\section*{Industry subdivision <br> <br> Industry value added (IVA)} <br> <br> Industry value added (IVA)}The structure of ANZSIC comprises four levels, ranging from industry division (broadest level) to industry class (finest level). The main purpose of the industry division level is to provide a limited number of categories which give a broad overall picture of the economy. There are 19 divisions within ANZSIC, each identified by an alphabetical letter, that is, 'A' for Agriculture, forestry and fishing, 'B' for Mining, 'C' for Manufacturing, etc.

This is the broadest level category within each industry division of ANZSIC and is identified by a two-digit code, e.g. Industry Subdivision 14 for Wood product manufacturing. Industry subdivisions are built up from industry groups which, in turn, are built up from industry classes.

IVA is an estimate of the difference between the market value of the output of an industry and the purchases of materials and expenses incurred in the production of that output.

The derivation of IVA for individual businesses depends on whether they are classified as market or non-market producers. Non-market producers are those institutions which provide goods or services either free or at prices that are not economically significant. In other words, their prices are not significantly influenced by the amounts that producers are willing to supply, nor the amounts that users are willing to pay to purchase the goods or services being provided. Conversely, market producers provide goods and services at prices that are economically significant.

For market producers, the derivation of IVA is as follows:
Sales and service income
plus Funding from federal, state and/or local government for operational costs
plus Capital work done for own use
plus Closing inventories
less Opening inventories
less Purchases of goods and materials
less Other intermediate input expenses
equals IVA
However, it should be noted that IVA is a measure of economic activity and is not equivalent to operating profit before tax (OPBT). Wage and salary expenses, and most other labour costs, are not taken into account in the calculation for market producers, neither are interest expenses, depreciation or a number of lesser expenses. On the income side, OPBT includes total income, whereas IVA only includes sales and service income and government funding for operational costs.

As a principle, the output of non-market production is valued at cost, including intermediate input expenses. As shown in the above derivation, purchases and other intermediate input expenses are deducted from output in order to arrive at IVA.

Accordingly, the derivation of IVA for non-market producers can be described as follows: Selected labour costs
plus Depreciation and amortisation

## equals IVA

Estimates of industry value added are obtained by summing the contributions of businesses classified to that industry, both market and (if any) non-market producers. Market producers predominate in most industries.

Industry value added is related to, but different from, the national accounting variable gross value added. For national accounts purposes, gross value added is calculated by adjusting IVA to include General government units and also to account for some other effects.

## Industry value added per

 person employedInterest coverage

Interest expenses

Interest income

Investment rate (value added)

Labour costs

Large business
Medium business
Natural resource royalties expenses

Net capital expenditure
Opening inventories

Operating profit before tax
(OPBT)

Other capital expenditure

Other income

IVA of businesses which operated in a given industry during the given year, divided by the number of persons employed by businesses in that industry during the last pay period ending in June of that year. Persons employed include working proprietors and partners.

The number of times that businesses can meet their interest expenses from their earnings before net interest, tax, depreciation and amortisation (EBITDA), i.e. earnings before interest, tax, depreciation and amortisation divided by interest expenses. Includes interest paid on loans from banks, finance companies, partners, and related or unrelated businesses, and in respect of finance leases. Also includes interest equivalents such as hedging costs and expenses associated with discounted bills. Excludes bank charges other than interest, and capital repayments.

Includes interest received from deposits in banks and non-bank financial institutions, loans, advances, finance leases and earnings on discounted bills. Excludes capital payments received.

The proportion of industry value added (IVA) used to acquire capital, i.e. (capital expenditure divided by IVA ) multiplied by 100.

Comprises wages and salaries (including salary sacrificed earnings paid on behalf of employees and employee share based payments and stock options), employer contributions into superannuation, workers' compensation premiums/costs, fringe benefits tax and payroll tax. Also includes capitalised wages and salaries.

See the entry for business size.
See the entry for business size.
Includes payments under mineral lease arrangements, payments under timber and quarrying lease arrangements, and resource rent taxes and royalties. Excludes payments for royalties from intellectual property (e.g. patents and copyrights) and computer software licence fees. Gold tax payments are also excluded.

The value of total capital expenditure less proceeds received from the disposal of assets.
The value of all inventories of finished goods (including inventories for resale), work-in-progress (less progress payments billed), raw materials, fuels and containers at the beginning of the reporting period.

Profit before extraordinary items are brought to account and prior to the deduction of income tax and appropriations to owners (e.g. dividends paid), i.e. total income less total expenses plus change in inventories.

Total (gross) expenditure on acquiring fixed tangible assets other than transport vehicles and equipment and intangible assets. Includes industrial, electronic and electrical plant, machinery and equipment, land, dwellings, other buildings and structures and capitalised computer software and hardware.

Other expenses Expenditure items not separately itemised. Examples include bad and doubtful debts, natural resource royalty expenses, land tax and land rates, computer software expenses, freight, other royalties expenses, payments to employment agencies for staff and other operating expenses.

Income from sources not separately itemised, including:

- dividend income
- donations
- net profit or loss on share trading, asset sales, variations in exchange rates or resulting from the revaluation of assets in accordance with the Australian International Financial Reporting Standards (AIFRS).

Also includes funding from government for specific capital items in the Industry performance table only.

## Other intermediate input expenses

Payroll tax

## Profit margin

Purchases

Purchases of goods and materials

Rent, leasing and hiring income

Sales and service income

Sales and service income per person employed

This is a balancing item. It is the difference between the sum of (sales and service income, funding from government for operational costs, capital work done for own use and change in inventories) less purchases of goods and materials and industry value added.

A tax levied by state and territory governments on the amount of wages and salaries paid by a business. Excludes pay-as-you-go withholding tax.

The percentage of sales and service income available as operating profit before tax (OPBT), i.e. (OPBT divided by sales and service income) multiplied by 100.

Comprises purchases of materials, components, containers and packaging materials for manufacture or construction, and purchases of finished goods for resale. Excludes delivery charges separately invoiced or itemised by suppliers and capitalised purchases.

Purchases plus capitalised purchases.

See the entry for sales and service income.

Includes:

## Sales of goods

- whether produced or not by the business (including goods produced for the business on a commission basis). Includes export sales, sales or transfers to related businesses or to overseas branches of the business, progress payments relating to long term contracts if they are billed in the period, delivery charges not separately invoiced or itemised to customers, sales of goods produced by the business from crude materials purchased, and income from 'specific' rates (e.g. water, sewerage, irrigation and drainage rates). Excludes excise and duties received on behalf of the government (e.g. the petroleum production excise duty), sales of assets, natural resource royalties income, interest income, and delivery charges separately invoiced or itemised to customers. Exports are valued free on board, i.e. export freight charges are excluded.

## Income from services

- includes income from consulting services, income received from transporting goods not owned or sold by this business/organisation, repair, maintenance and service income and fees, contract, subcontract and commission income, management fees/charges from related and unrelated businesses, installation charges, delivery charges separately invoiced or itemised to customers and royalties from intellectual property (e.g. patents and copyrights) and natural resource royalties income. Also includes income from the provision of transport services and fee for service income. Excludes interest income, and delivery charges not separately invoiced to customers.

## Rent, leasing and hiring income

- derived from the ownership of land, dwellings, buildings and other structures, motor vehicles, plant, machinery and other equipment. Excludes royalties from mineral leases, income from finance leases and payments received under hire purchase arrangements. This item is included in sales and service income, and is not separately published.

These are valued net of discounts given and exclusive of goods and services tax (GST). Extraordinary items are also excluded.

Sales and service income of businesses which operated in a given industry during the given year ended 30 June, divided by the number of persons employed by businesses in that industry during the last pay period ending in June of that year. Persons employed include working proprietors and partners.

See the entry for sales and service income.
Selected labour costs

Comprises:

## Selected labour costs continued

## Small business

## Superannuation

Total expenses
Total income

Total selected industries

Wages and salaries

## Wages and salaries per

 employee
## Wages and salaries to sales and service income ratio

Workers' compensation premiums/costs

- wages and salaries (including provisions for employee entitlements, salary sacrificed earnings, share based payments and stock options)
- employer contributions into superannuation
- workers' compensation premiums/costs.

See the entry for business size.
See the entry for employer contributions into superannuation.
The sum of all expense components.
Comprises sales and service income, interest income, funding from government for operational costs and other income (for details, see the entries for these items).

Total selected industries comprises data for all ANZSIC divisions, excluding ANZSIC Division K Financial and insurance services. For a detailed discussion of the scope and coverage of the estimates, see Explanatory Notes paragraphs 6-21. Units classified to the General government institutional sector are excluded from the scope of estimates for most industries that comprise Total selected industries. This limits coverage to private sector entities which particularly affects Public administration and safety, Education and training, and Health care and social assistance divisions.

The gross wages and salaries (including capitalised wages and salaries) of all employees of the business. The item includes severance, termination and redundancy payments, salaries and fees of directors and executives, retainers and commissions of persons who received a retainer, bonuses, and annual and other types of leave. Provision expenses for employee entitlements (e.g. provisions for annual leave and leave bonus, long service leave, sick leave, and severance, termination and redundancy payments) are also included, as are salary sacrificed earnings and remuneration of employees in the form of share based payments and stock options. (Note that in issues of this publication prior to 2006-07, salary sacrificed earnings and remuneration of employees in the form of share based payments and stock options were reported under related expense items. For example, salary sacrificed for superannuation was included in employer contributions into superannuation).

Payments related to self-employed persons such as consultants, contractors and persons paid solely by commission without a retainer are excluded. The drawings of working proprietors and partners are also excluded.
The wages and salaries paid by businesses which operated in a given industry during the given year ended 30 June, divided by the number of employees in that industry during the last pay period ending in June of that year. Working proprietors and partners are not included in employee estimates. The drawings of working proprietors and partners are not included in estimates of wages and salaries.

The wages and salaries paid by businesses which operated during the year ended 30 June as a proportion of the sales and service income of businesses which operated during the same year.

Workers' compensation is a compulsory insurance cover to be taken out by all employers, except for self-insured workers, according to legislative schemes to cover employees suffering injury or disease in the course of or arising out of employment.
