ANNUAL MANUFACTURING INDUSTRY COLLECTION

ABOUT THIS ISSUE

DATA REVISIONS

REGIONAL DATA

DATA TO BE RELEASED IN OTHER PUBLICATIONS

The 1998-99 collection was conducted as a sample survey of approximately 17,000 manufacturing establishments nationally, which were requested to provide data on employment, wages and salaries, turnover, purchases and whether their products were exported. A sub-sample of approximately 7,000 establishments was also asked to provide detailed structural and performance data, and value of sales for commodities produced.

For some time now, the ABS has been using Australian Taxation Office (ATO) information on group employer (GE) registrations to add new businesses to the ABS business register. After detailed investigation, it has now been decided to use GE information to delete from the business register those businesses which have ceased trading or are no longer employing staff. As a result, a large number of businesses have been removed from the ABS business register which has had a small impact on published aggregates. For more details, see paragraphs 11-13 of the Explanatory Notes.

The process of using GE information to delete businesses from the ABS business register has been introduced for the 1998-99 manufacturing survey. This has had an impact on previous years' data. Estimates in Table 1, for the previous three manufacturing collections (covering 1995-96 to 1997-98 inclusive) have been adjusted in such a way as to phase in the impact over this time.

For more information about the availability of sub-State estimates from the 1998-99 collection, see paragraph 26 of the Explanatory Notes.

Detailed manufacturing industry statistics for each State are being released progressively in a series of publications, Manufacturing Industry, [State], 1998-99 (Cat. nos. 8221.1-8221.6). The publication for New South Wales (Cat. no. 8221.1) also contains selected data for the Australian Capital Territory.

Management unit data and a wide range of manufacturing related ABS data, as well as data from other sources, will be presented in the compendium publication Manufacturing, Australia, 2000 (Cat. no. 8225.0) to be released in December 2000. Manufacturing unit data at the total manufacturing level are also included in Business Operations and Industry Performance, Australia, Preliminary, 1998-99 (Cat. no. 8142.0).

Zia Abbasi<br>Regional Director, Victoria

## MAIN FEATURES

## OVERVIEW

Turnover for the year 1998-99 by manufacturing establishments operating in Victoria was $\$ 71,984 \mathrm{~m}$, which resulted in an industry value added (IVA) for the year of $\$ 22,847 \mathrm{~m}$. For turnover, this represents a $3.2 \%$ increase in current price terms from the $\$ 69,755 \mathrm{~m}$ recorded for 1997-98. These manufacturing establishments employed 298,700 persons at the end of June 1999 and paid $\$ 11,588 \mathrm{~m}$ in wages and salaries in 1998-99.

The percentage of Australian manufacturing employment in Victoria at the end of June 1999 was $32.3 \%$, a decrease of 0.8 percentage points on that reported at the end of June 1998. The Victorian industry subdivisions which made a significant contribution to national manufacturing employment at the end of June 1999 at the industry subdivision level were Textile, clothing, footwear and leather manufacturing (50.3\%), Petroleum, coal, Chemical and associated product manufacturing (37.0\%) and Machinery and equipment manufacturing (34.4\%).

The percentage contribution by Victoria to total Australian manufacturing turnover and IVA in 1998-99 was $32.6 \%$ and $33.1 \%$ respectively. For turnover, this represents a decrease of 0.2 percentage points on the contribution reported in 1997-98. The Victorian industry subdivisions which made a significant contribution to national manufacturing turnover and IVA in 1998-99 at the industry subdivision level were Textile, clothing, footwear and leather manufacturing ( $51.0 \%$ and $54.8 \%$ respectively), Machinery and equipment manufacturing ( $41.1 \%$ and $38.9 \%$ respectively), Other manufacturing ( $34.7 \%$ and $32.7 \%$ respectively) and Petroleum, coal, chemical and associated PRODUCT MANUFACTURING ( $33.1 \%$ and $35.8 \%$ respectively).

For the third consecutive year, for 1998-99, the contribution to Australian turnover by Victorian manufacturers ( $\$ 71,984 \mathrm{~m}$ ) has exceeded that of manufacturers located in New South Wales $(\$ 71,876 \mathrm{~m})$. When this first occurred, for $1996-97$, it was the first time that this had happened since the commencement of integrated economic statistics with the 1968-69 collection.

Between them, Victoria (at 33.1\%) and New South Wales (at 33.2\%) contributed nearly two-thirds of manufacturing IVA for Australia in 1998-99. In 1997-98, Victoria had the largest share of IVA (at 33.2\%) followed by New South Wales (at 32.4\%). This was the only change in the order of the States and Territories in this period.

As in previous years, Victoria and New South Wales were the States in which manufacturing employment was concentrated at the end of June 1999. Victoria accounted for $32.3 \%$ of Australian manufacturing employment, with the corresponding figure for New South Wales being 32.2\%.

This is the second consecutive year that employment in the Victorian manufacturing industry has exceeded that for New South Wales. This is, however, a decrease of 0.8 percentage points for Victoria and an increase of 0.4 percentage points for New South Wales on the contributions that they recorded 12 months earlier.

IVA for 1998-99 was $\$ 22,847 \mathrm{~m}$. The industry subdivisions with the largest contribution to total manufacturing IVA and the most notable industry classes (where publishable) within those subdivisions (as a percentage of Victoria's total manufacturing IVA) were:

## MAIN FEATURES continued

INDUSTRY VALUE ADDED continued

- Machinery and equipment manufacturing (23.8\%), where the industry group Motor vehicle and part manufacturing (ANZSIC Group 281 at 12.2\%) was the most substantial.
- Food, beverage and tobacco manufacturing (19.8\%), where the industry classes Dairy product manufacturing n.e.c. (ANZSIC Class 2129 at 2.7\%), Fruit and vegetable processing (ANZSIC Class 2130 at $2.1 \%$ ) and Wine manufacturing (ANZSIC Class 2183 at 1.6\%) were the most substantial.
- Petroleum, coal, chemical and associated product manufacturing (15.4\%), where the industry class Medicinal and pharmaceutical product manufacturing (ANZSIC Class 2543 at 2.7\%) was the most substantial.
- Metal product manufacturing (11.8\%), where the industry class Basic iron and steel manufacturing (ANZSIC Class 2711 at 2.4\%) was the most substantial.

Industry classes making a notable contribution to industry value added and not included in the subdivisions listed above included Printing (ANZSIC Class 2412 at 3.9\%) and Newspaper printing or publishing (ANZSIC Class 2421 at 2.5\%).

The Victorian manufacturing industry subdivision in 1998-99 with the highest IVA per person employed was Petroleum, coal, chemical and associated product manufacturing at $\$ 98,900$ per person employed, closely followed by Food, beverage and tobacco manufacturing at $\$ 96,400$ per person employed.

EMPLOYMENT AND
WAGES

The Victorian manufacturing industry employed 298,700 persons at the end of June 1999 and paid $\$ 11,588 \mathrm{~m}$ in wages and salaries in 1998-99. This represents an average of $\$ 38,800$ paid in annual wages and salaries per person employed at the end of June 1999, an increase of $7.3 \%$ on the $\$ 36,200$ recorded twelve months earlier. (Readers should note that the employment figure in this average measures the number of persons employed at the end of June and includes working proprietors. The wages and salaries figure excludes the drawings of working proprietors).

Victorian manufacturing employment increased slowly from June 1994 (299,900 persons) to June 1997 (303,900 persons) and then increased (by 3.3\%) to 313,900 persons at the end of June 1998. Employment in the Victorian manufacturing industry decreased by 4.8\% or 15,200 persons between June 1998 (313,900 persons) and June 1999

## MAIN FEATURES continued

EMPLOYMENT AND
WAGES continued
(298,700 persons). Over the five years from June 1994 to June 1999, employment fell by $0.4 \%$ or 1,200 persons

## EMPLOYMENT

Between June 1998 and June 1999, employment decreased in six of the nine manufacturing industry subdivisions and increased in three. The industry subdivisions with the largest percentage and absolute decreases were Machinery and equipment manufacturing (down $11.4 \%$ or 8,700 persons), Textile, clothing, footwear and leather manufacturing (down $9.5 \%$ or 3,600 persons) and Metal product manufacturing (down $4.8 \%$ or 1,900 persons). The largest percentage and absolute increase was recorded by Non-metallic mineral product manufacturing (up 9.3\% or 800 persons).

Average wages and salaries paid per person employed at the end of June rose in eight industry subdivisions and fell in one between 1997-98 and 1998-99.

The industry subdivisions to record the largest percentage increases in wages and salaries paid per person employed at the end of June were:

- Other manufacturing (up $12.1 \%-\$ 25,100$ to $\$ 28,100$ ), where 8 (out of 9 ) industry classes recorded an increase, with the largest being:
- Prefabricated building manufacturing n.e.c. (ANZSIC Class 2919) (up $95.0 \%-\$ 13,300$ to $\$ 25,900$ );
- Prefabricated metal building manufacturing (ANZSIC Class 2911) (up $59.9 \%-\$ 18,200$ to $\$ 29,100$ ); and
- Wooden furniture and upholstered seat manufacturing (ANZSIC Class 2921) (up $17.1 \%-\$ 23,000$ to $\$ 26,900$ ).
- Textile, clothing, footwear and leather manufacturing (up $10.2 \%-\$ 27,000$ to $\$ 29,700$ ), where 15 (out of 19 ) industry classes recorded an increase, with the largest being:
- Clothing manufacturing n.e.c. (ANZSIC Class 2249) (up 65.2\%—\$13,000 to \$21,400);
- Rope, cordage and twine manufacturing (ANZSIC Class 2223)
(up $21.2 \%-\$ 44,600$ to $\$ 54,100$ ); and
- Men's and boys' wear manufacturing (ANZSIC Class 2241)
(up $17.7 \%-\$ 24,900$ to $\$ 29,300)$
- Metal product manufacturing (up $8.6 \%-\$ 35,200$ to $\$ 38,300$ ), where fifteen (out of twenty) industry classes recorded an increase, with the largest (where publishable) being:

EMPLOYMENT AND WAGES continued

- Fabricated metal product manufacturing n.e.c. (ANZSIC Class 2769) (up $26.9 \%-\$ 27,500$ to $\$ 34,900$ ); and
- Hand tool and general hardware manufacturing (ANZSIC Class 2761) (up $21.9 \%-\$ 27,300$ to $\$ 33,300$ ).

The industry subdivision to record the decrease between 1997-98 and 1998-99 in wages and salaries paid per person employed at the end of June was Non-metallic mineral PRODUCT MANUFACTURING (down $3.5 \%-\$ 40,300$ to $\$ 38,900$ ). This industry subdivision recorded a decrease overall although seven out of eleven industry classes showed an increase. The industry class to record the largest percentage decrease was Concrete Slurry manufacturing (ANZSIC Class 2633) (down 30.4\%—\$39,800 to \$27,700), whereas the industry class to record the largest percentage increase was Ceramic product manufacturing (ANZSIC Class 2622) (up 27.8\%—\$33,600 to \$43,000).

Industry classes (where publishable) belonging to other industry subdivisions and which had the largest percentage increases between 1997-98 and 1998-99 in wages and salaries paid per person employed at the end of June were Photographic and optical good manufacturing (ANZSIC Class 2831) (up 38.8\%-\$45,800 to \$63,600), Services to printing (ANZSIC Class 2413 ) (up $24.3 \%-\$ 29,100$ to $\$ 36,200$ ) and Food processing machinery manufacturing (ANZSIC Class 2863) (up $21.7 \%-\$ 36,000$ to $\$ 43,700$ ).

Turnover rose, in current price terms, by $\$ 2,229 \mathrm{~m}$ to $\$ 71,984 \mathrm{~m}$ for $1998-99$. This represents a $3.2 \%$ increase on the $\$ 69,755 \mathrm{~m}$ recorded for $1997-98$.

Eight of the nine manufacturing industry subdivisions recorded an increase in turnover between 1997-98 and 1998-99. Machinery and equipment manufacturing remained the largest contributor to total manufacturing turnover but recorded the smallest percentage increase (up 0.8\%). Food, beverage and tobacco manufacturing remained the second largest contributor to total Victorian manufacturing turnover and contributed $44.7 \%$ ( $\$ 997 \mathrm{~m}$ ) of the total increase for the year.

The largest percentage increases between 1997-98 and 1998-99 were recorded by Non-metallic mineral product manufacturing (up 15.2\%) and Printing, publishing and recorded media (up 9.8\%). Petroleum, coal, chemical and associated product manufacturing (down $3.4 \%$ ) was the only industry subdivision to record a fall in turnover.

The industry classes with the largest percentage increases between 1997-98 and 1998-99 were:

- Prefabricated building manufacturing n.e.c. (ANZSIC Class 2919) (up $83.8 \%$ or $\$ 11 \mathrm{~m}$ );
- Plastic foam product manufacturing (ANZSIC Class 2565) (up 76.0\% or $\$ 70 \mathrm{~m}$ ); and
- Concrete product manufacturing n.e.c. (ANZSIC Class 2635) (up 74.7\% or $\$ 152 \mathrm{~m}$ ).

The industry classes with the largest dollar increases (where publishable) between 1997-98 and 1998-99 were:

- Dairy product manufacturing n.e.c. (ANZSIC Class 2129) (up $\$ 291 \mathrm{~m}$ or $10.7 \%$ );
- Printing (ANZSIC Class 2412) (up $\$ 282 \mathrm{~m}$ or $14.2 \%$ ); and
- Fruit and vegetable processing (ANZSIC Class 2130) (up $\$ 207 \mathrm{~m}$ or 14.5\%).

The industry classes (where publishable) with the largest percentage decreases between 1997-98 and 1998-99 were:

TURNOVER continued

EXPORTS

- Basic non-ferrous metal manufacturing n.e.c. (ANZSIC Class 2729) (down $64.5 \%$ or $\$ 12 \mathrm{~m}$ ) ;
- Telecommunication, broadcasting and transceiving equipment manufacturing (ANZSIC Class 2842) (down $41.8 \%$ or $\$ 440 \mathrm{~m}$ ); and
- Leather and leather substitute product manufacturing (ANZSIC Class 2262) (down $39.9 \%$ or $\$ 16 \mathrm{~m}$ ).

The industry classes (where publishable) with the largest dollar decreases between 1997-98 and 1998-99 were:

- Telecommunication, Broadcasting and transceiving equipment manufacturing (ANZSIC Class 2842) (down $\$ 440 \mathrm{~m}$ or $41.8 \%$ ) ;
- Food manufacturing n.e.c. (ANZSIC Class 2179) (down $\$ 176 \mathrm{~m}$ or $14.7 \%$ ); and
- Electrical equipment manufacturing n.e.c. (ANZSIC Class 2859) (down $\$ 159 \mathrm{~m}$ or $18.7 \%$ ).

For $1998-99$, Victorian manufacturers directly exported $\$ 8,452 \mathrm{~m}$ of the goods that they produced. This represents a $10.5 \%$ decrease on the $\$ 9,439 \mathrm{~m}$ recorded for $1997-98$. The percentage of total sales and transfers out of goods for sale produced that were exported has also decreased (from 14.5\% for 1997-98 to 12.6\% for 1998-99).

Manufacturers' direct exports decreased in six out of the nine industry subdivisions between 1997-98 and 1998-99 and increased in three. The industry subdivisions to record the largest absolute decreases in direct exports between 1997-98 and 1998-99 were Machinery and equipment manufacturing (down $\$ 598 \mathrm{~m}$ or $17.6 \%$-from $\$ 3,405 \mathrm{~m}$ to $\$ 2,807 \mathrm{~m}$ ) and Food, beverage and tobacco manufacturing (down $\$ 255 \mathrm{~m}$ or $9.6 \%$-from $\$ 2,663 \mathrm{~m}$ to $\$ 2,408 \mathrm{~m}$ ). The industry subdivisions to record the largest percentage decreases in direct exports between 1997-98 and 1998-99 were Wood and paper product manufacturing (down $39.5 \%$ or $\$ 56 \mathrm{~m}$-from $\$ 141 \mathrm{~m}$ to $\$ 85 \mathrm{~m}$ ) and Other manufacturing (down $27.9 \%$ or $\$ 17 \mathrm{~m}-$ from $\$ 63 \mathrm{~m}$ to $\$ 45 \mathrm{~m}$ ).

The largest increases in direct exports were recorded by Petroleum, coal, chemical and asSociated product manufacturing (up $\$ 124 \mathrm{~m}$ or $13.1 \%$-from $\$ 946 \mathrm{~m}$ to $\$ 1,070 \mathrm{~m}$ ) and Non-metalic mineral product manufacturing (up $\$ 38 \mathrm{~m}$ or $66.4 \%$-from $\$ 57 \mathrm{~m}$ to $\$ 95 \mathrm{~m}$ ).

EXPORTS AS A PROPORTION OF GOODS PRODUCED

## MAIN FEATURES continued

EXPORTS continued
Commencing with the 1994-95 manufacturing collection, data on exports have been collected as part of the annual manufacturing collection. Exports as a proportion of sales and transfers out of goods for sale produced has decreased from $13.3 \%$ for 1994-95 to $12.6 \%$ for $1998-99$, with a high point in the series (14.5\%) in 1997-98.

## not applicable

(a) See paragraph 5 of the Explanatory Notes.
(b) Group Employer information held by the Australian Taxation Office is now being used to delete those businesses which have ceased trading or are no longer employing staff. See paragraphs 11-13 of the Explanatory Notes.
(c) For factors affecting comparability of data over the time period shown, see paragraphs 14-20 of the Explanatory Notes.
(d) Includes working proprietors.
(e) Excludes the drawings of working proprietors.
(f) Value data are at current prices and therefore do not discount the impact of price changes.
(g) Turnover divided by the number of persons employed at the end of June.
(h) Industry value added divided by the number of persons employed at the end of June.
(i) From the 1997-98 manufacturing collection and onwards, new international standards apply to the calculation of turnover. For more details see paragraphs 14 and 15 of the Explanatory Notes.
(j) From the 1997-98 manufacturing collection and onwards, industry value added (IVA) replaces industry gross product (IGP) as the measure of an industry's contribution to gross domestic product. IGP has also been shown for 1997-98. For more details, see paragraphs 16 and 17 of the Explanatory Notes.
(k) For 1995-96, excludes provision expenses for employee entitlements. See paragraph 19 of the Explanatory Notes.

1 This publication presents final statistics for Victoria compiled from a survey of manufacturing establishments for 1998-99, with some comparative statistics relating to preceding years. The emphasis of this publication is on the release of statistics for the main data items included in the survey.

2 Manufacturing, as specified in Division C of the Australian and New Zealand Standard Industrial Classification (ANZSIC), broadly relates to the physical or chemical transformation of materials or components into new products, whether the work is performed by power-driven machines or by hand.
3 The manufacturing collection is conducted on an annual basis. For the 1998-99 collection, a sample of approximately 17,000 establishments nationally were asked to provide data on employment, wages and salaries, turnover, purchases and whether their products were exported. Data on IVA are also available from this collection. In addition, a variety of samples was selected to produce data on a range of other variables. The next manufacturing census will be conducted in respect of 2001-02, with sample surveys conducted for the next two years.

4 Estimates of IVA were compiled using data from the 17,000 sample population and a sub-sample of approximately 7,000 establishments which were asked to provide detailed structural and performance data. These 7,000 establishments were also asked to supply value of sales for commodities produced. The availability of this fine level commodity/activity data for these units has enabled better identification of inscope establishments as well as providing a basis for an objective industry code to be allocated to responding units. A sample of approximately 5,200 manufacturing management units was asked the detailed information required to derive operating profit before tax. Selected data from the annual manufacturing collection and data from other collections are included in the compendium publication Manufacturing, Australia, 2000 (Cat. no. 8225.0).

5 The business unit for which statistics are presented in this publication is the establishment. A manufacturing establishment is one predominantly engaged in manufacturing activities, but the data collected for it cover all activities of the establishment (including non-manufacturing activities). Conversely, there are some establishments predominantly engaged in non-manufacturing activities which also undertake limited manufacturing activities; these are excluded from the collection.

6 A small number of manufacturing establishments engage, in a significant way, in a variety of activities which are normally carried out by different industries. For example, a predominantly manufacturing establishment may also undertake significant amounts of wholesaling. Similarly, a manufacturing establishment may produce significant volumes of a variety of goods which are normally produced in different manufacturing industries. In such cases, the original establishment is 'split' into a separate establishment for each significant activity which belongs to a separate industry. For the 1998-99 manufacturing collection, 'significant' was defined as turnover of $\$ 7.3$ million or more.

7 The statistics in this publication exclude some very small manufacturers. Those excluded are manufacturers not employing staff at 30 June of the reference year (such as sole proprietorships or family partnerships) which had not registered as group employers (GE) with the Australian Taxation Office (ATO). Though a substantial number, these businesses would contribute only marginally to aggregate data were they to be included. In addition, the ABS

SCOPE AND COVERAGE
continued

STANDARD UNITS

RELIABILITY OF ESTIMATES

DATA ADJUSTED

COMPARABILITY WITH
PREVIOUS STATISTICS
attempts to obtain data for those businesses which ceased operation during the year, but it is not possible to obtain data for all of them.

8 For the definition of the standard business units now in use, see the Glossary.

9 For information on this subject, see Technical Note 1.
10 Data in this issue continue to be adjusted to allow for lags in processing new businesses to the ABS business register, i.e. adjustments have been made to allow for new businesses which had commenced operations but for which details had not been processed to the ABS business register in time for inclusion in the annual manufacturing industry collection. Adjustments of this type will continue to be applied in future periods. The majority of businesses affected by these lags are small in size. The effect of these adjustments on 1998-99 Victorian employment is an increase of $0.7 \%$ while the effect on turnover is an increase of $0.4 \%$. All industry subdivisions were affected to a similar degree.

11 For some time now, the ABS has been using ATO information on GE registrations to add new businesses to the ABS business register. After detailed investigation, it has now been decided to use GE information to delete from the business register those businesses which have ceased trading or are no longer employing staff.

12 The process of using GE information to delete businesses from the ABS business register has been introduced for the 1998-99 manufacturing survey. The result is that a large number of businesses were removed from the business register and, therefore, from the population for the 1998-99 manufacturing survey. This process will now also be ongoing, but the number of businesses removed in future years will be relatively small.

13 The use of GE information to delete businesses from the ABS business register has also impacted on previous years' data. Estimates for the previous three manufacturing collections (covering 1995-96 to 1997-98 inclusive) have been adjusted in such a way as to phase in the impact over this time. The impact on survey results has been to reduce estimates slightly. For example, total Victorian manufacturing employment for 1997-98 was reduced by $1.5 \%$ and turnover by $0.8 \%$. For periods before 1995-96, the impact is estimated to have been negligible. The impacts of the ongoing process are also expected to be negligible.

14 Commencing with estimates for 1997-98, the definition of turnover has changed in line with new international standards for measuring economic variables. The composition of turnover estimates under the new standards is as follows:

Turnover (as previously defined)
plus Income from intellectual property royalties
equals Turnover (new standards)

15 Conceptually, some further differences exist between turnover on the old and new bases (particularly in relation to own account production of computer software, own account mineral exploration, and own account production of literary, entertainment or artistic originals). However, as these activities are relatively unimportant for manufacturing industries, no attempt has been made to measure them.

COMPARABILITY WITH
PREVIOUS STATISTICS continued

16 Commencing with estimates for 1997-98, under new international standards, contribution to gross domestic product (GDP) by manufacturing industries is being measured by the variable 'Industry value added' (IVA). Estimates for IVA measure the value added by an industry to the intermediate inputs used by that industry. Previously, the corresponding contribution to GDP was measured by the variable 'Industry gross product' (IGP). It should also be noted that IVA is not the same variable as 'Value added' which was published for manufacturing establishments until 1992-93.

17 Composition of IVA estimates and their relationship to IGP estimates are:
Turnover (new standards)
plus Closing inventories
less Opening inventories
less Intermediate input expenses (see the operating expenses entry in the Glossary)
equals IVA
IVA
plus Intellectual property royalty expenses
less Intellectual property royalty income
less Computer software expenses not capitalised by the business
less Selected indirect taxes (For manufacturing industries, the main types are fringe benefits tax, payroll tax, land rates and land taxes.)
equals IGP

18 Commencing with the 1994-95 manufacturing collection, multi-establishment management units have been 'collapsed' for reporting purposes into single establishment management units, unless they had significant activity in more than one industry and/or State or Territory. The effect of this process is that most manufacturing businesses which previously reported for more than one establishment were asked to combine operations by those establishments into a single reporting unit. The effect of this on manufacturing statistics as contained in this publication has been minimal.

19 For the 1995-96 collection only, provision expenses for employee entitlements were excluded from wages and salaries. For all other years, these provision expenses are included in wages and salaries.

20 Periodic collections of the Retail and Wholesale Divisions of ANZSIC, conducted for the 1998-99 reference year, identified a number of businesses who were predominantly manufacturers. A small number of these cases were determined to be significant in some manufacturing industries and have therefore been added into the manufacturing collection for 1998-99. The effect of these additional units on published aggregates have been calculated as adding $0.4 \%$ to both employment and turnover for Victoria.

21 Summary of operations data at the industry subdivision level classified by the employment size of individual manufacturing establishments (see the Glossary for its definition) are presented in table 3. Similarly, exports of goods produced data at the industry subdivision level classified by the broad employment size of individual manufacturing establishments are presented in table 4. The statistics in these two tables relate only to those manufacturing establishments operating at 30 June 1999. As such, the figures presented represent a slightly different population from those presented in the other tables from the manufacturing collection. These other tables include data for those manufacturing establishments which operated at any time during 1998-99.

EXPORTS BY MANUFACTURERS

22 The treatment of unincorporated joint ventures according to the ABS's standard units definitions has an effect on the data when the data are classified by employment size. This is because joint venture participants report details of turnover, but often have few or no employees or operating expenses. The labour for such operations is usually employed and paid for by the joint venture operator. Similarly, the operating expenses are usually reported by the joint venture operator. On the other hand, the operator does not report any details of turnover (unless it also happens to be a participant). If each of these joint venture operations were to be treated as a single business unit in the statistics, it is highly probable that the Metal product manufacturing industry would reflect a similar dominance pattern to the other manufacturing industries. In other words, in the statistics in tables 3 and 4, the participants in unincorporated joint ventures are recorded in the 0-4 persons employment size category, whereas the operators of the unincorporated joint ventures are recorded in larger employment size categories. This treatment affects the relative contribution of the various employment size categories for this industry.

23 All establishments included in the manufacturing collection were asked whether they exported and, if so, what percentage of their sales of goods produced plus transfers out of goods produced by the establishment for sale were exported by their business or an agent on their behalf. The data presented in table 4 are derived by applying the percentage of exports reported for each exporting unit and then aggregating that figure. The data in table 4 exclude those manufacturing establishments which operated during 1998-99 but were not operating at 30 June 1999.

24 The statistics presented in table 4 for the value of exports by manufacturers or their agents are not intended to be the same as the value of exports classified by manufacturing industry of origin as published by the ABS in international trade statistics. These latter statistics are intended to measure total exports regardless of which business or organisation does the exporting (and to identify the probable industry from which the goods originated), whereas the statistics in tables 4 and 5 only include exports directly undertaken by the manufacturer or by its agent.

25 The data in table 4 showing exports by manufacturers or their agents can be expected to show a much lower value than the exports data from the international trade series. The main reason is that for many exports of goods manufactured in Australia, the actual exporting activity is undertaken by a business other than the manufacturer. Also, the value of goods produced on a commission or fee basis for non-manufacturing businesses and which are then exported is not included in the data in tables 4 and 5 . Examples of relevant commission work are the 'slaughtering fee' charged by an abattoir for processing livestock owned by a meat exporter and the 'tolling fee' charged by an aluminium smelter to process ores owned by other (e.g. mining) businesses. Also excluded from tables 4 and 5 are any exports by manufacturers of goods which were not produced by that manufacturer. These and other goods exported (e.g. re-exports) are included in the international trade data. Finally, differences in valuation of exports arise because the value of exports in the international trade series would include the value to the manufacturer plus profit margins for the exporter and for any intermediaries between the manufacturer and the exporter.

26 Current investigations carried out by the ABS have shown that it is possible to produce some regional or sub-State estimates in survey collection years. The ABS proposes to make sub-State data available later this year, after the release of

UNPUBLISHED STATISTICS

ROUNDING
the Manufacturing Industry, [State], 1998-99 publication series. For further information about the availability of sub-State data, please contact John Ridley on Sydney 0292684541.

27 Sub-State data in census years will continue to be published in the Manufacturing Industry, [State] series or will be available as unpublished data.

28 ABS publications draw extensively on information provided freely by individuals, businesses, governments and other organisations. Their continued cooperation is very much appreciated: without it, the wide range of statistics published by the ABS would not be available. Information received by the ABS is treated in strict confidence as required by the Census and Statistics Act 1905.

## 29 The Information Paper: Availability of Statistics Related to

Manufacturing (Cat. no. 8205.0) outlines the vast amount of published and unpublished data available from the annual manufacturing industry collection, as well as data from other ABS collections.

30 A series of publications Manufacturing Industry, [State], 1998-99 (Cat. nos 8221.1-8221.6) will be produced for each State. The publication for New South Wales (Cat. no. 8221.1) also contains selected data for the Australian Capital Territory. These publications are being released progressively.
31 Users may also wish to refer to the following publications:

- Business Operations and Industry Performance, Australia, 1998-99 (Cat. no. 8140.0), to be released in December 2000—Annual publication
- Business Operations and Industry Performance, Australia, Preliminary, 1998-99 (Cat. no. 8142.0), released on 12 May 2000—Annual publication
- Environment Protection Expenditure, Australia, 1995-96 and 1996-97 (Cat. no. 4603.0), released on 2 July 1999—Biennial publication
- Information Paper: Availability of Statistics Related to Manufacturing, 1996 (Cat. no. 8205.0), released on 21 March 1996-Irregular publication
- Information Paper: Availability of Statistics Related to Manufacturing, 1997 (Cat. no. 8205.0), released on 16 January 1998-Irregular publication
- Information Paper: Improvements to ABS Economic Statistics, 1997 (Cat. no. 1357.0), released on 22 August 1997-Irregular publication
- Inventories and Sales, Selected Industries, Australia (Cat. no. 5629.0)—Quarterly publication
- Labour Force, Australia (Cat. no. 6203.0)-Monthly publication
- Manufacturing, Australia, 2000 (Cat. no. 8225.0), to be released in December 2000—Annual publication
- Manufacturing Industry, Australia, Preliminary, 1999-2000
(Cat. no. 8201.0), to be released in March 2001-Annual publication
32 A range of manufacturing industry statistics publications is available for previous years. As well, a considerable amount of data from the annual manufacturing collection exists in unpublished form. More detailed information to satisfy individual user requirements may be available on request. In general, unpublished data consist of finer industry dissections of the published data. Other more detailed data may also be available. A charge is made for providing unpublished information. The information paper (Cat. no. 8205.0) referred to in paragraphs 29 and 31 also provides more details.

33 Where figures have been rounded, discrepancies may occur between totals and the sums of the component items. Due to data being adjusted for lags in
processing new businesses to the ABS business register (see paragraph 10 ), this 'rounding rule' also applies to employment counts.

34 Proportions, ratios and other calculated figures shown in this publication have been calculated using unrounded estimates and may be different from, but are more accurate than, calculations based on the rounded estimates.

## ABBREVIATIONS

1 The 1998-99 manufacturing survey was designed primarily to deliver industry class estimates for Australia and States for the data items employment, wages and salaries, turnover and IVA. For the two Territories, the sample was designed to deliver industry subdivision data only.

2 All 1998-99 (and 1994-95, 1995-96 and 1997-98) data contained in this publication have been obtained from samples of manufacturers. As such, these data are subject to sampling variability; that is, they may differ from the figures that would have been produced if the data had been obtained from all manufacturers in the population. The measure of the likely difference as used by the ABS is given by the standard error, which indicates the extent to which an estimate might have varied by chance because the data were obtained from only a sample of units. There are about 2 chances in 3 that a sample estimate will differ by less than one standard error from the figure that would have been obtained if the data had been obtained from all units, and about 19 chances in 20 that the difference will be less than two standard errors.

3 The standard error can also be expressed as a percentage of the estimate, and this is known as the relative standard error. The relative standard errors for the 1998-99 employment, wages and salaries, turnover and IVA data for Victoria presented in this publication are nearly all $3 \%$ or less for industry subdivisions (see Technical Note 2 ) and most are $4.5 \%$ or less for industry classes.

4 Relative standard errors at the industry subdivision level for Victoria for selected data items representing the full range of data contained in this publication are shown in Technical Note 2. Detailed relative standard errors can be made available on request.

5 The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of inadequacies in available sources from which the population frame was compiled, imperfections in reporting by providers, errors made in collection such as in recording and coding data, and errors made in processing data. Inaccuracies of this kind are referred to collectively as non-sampling error and they may occur in any enumeration, whether it be a full census or a sample.

6 While it is not possible to quantify non-sampling error, every effort is made to reduce it to a minimum. Collection forms are designed to be easy to complete and assist businesses to report accurately. Efficient and effective operating procedures and systems are used to compile the statistics.

## ABS Australian Bureau of Statistics

Amount exported by this business unit or its agent

ANZSIC
Capitalised work done for own
use

Change in inventories
Closing inventories

## Commission manufacturing

Employment at end of June

Enterprise group

This represents the sales value of goods produced by an establishment (or for it on commission), including the value of manufactured goods transferred to other establishments of the business unit for sale, that are exported (or are intended for export) outside Australia by the business unit or by its agent.

Australian and New Zealand Standard Industrial Classification
Capitalised work done by the employees or proprietors of an establishment for use by the business unit or for rental or lease to other businesses. The main types of work are manufacturing, constructing, installing or repairing assets and development of computer software. This work is valued at the capitalised costs of the materials and the wages and salaries involved.

Conceptually, this item should also include own account mineral exploration and own account production of literary, entertainment or artistic originals. However, these activities are relatively unimportant for manufacturers and have not been measured for manufacturing industries.

The value of total closing inventories minus total opening inventories.
The value of all inventories of finished goods, work-in-progress, raw materials, fuels, containers and packaging as at the end of the reference period.

Significant amounts of manufacturing are undertaken on a commission basis by one manufacturer on behalf of another manufacturer or by a manufacturer on behalf of a non-manufacturer. Typically, a commission manufacturing transaction will involve a client commissioning the production of goods by a producing establishment from materials provided by the client. Ownership of those materials remains with the client. Similarly, the goods made from those materials are owned by the client.

For the purposes of the estimates in this publication, the producing establishment reports the commission fee as service income along with wages and salaries and any other expenses incurred.
If the client is a manufacturing establishment, then in addition to data for their own manufacturing operations, the client reports the sales and stocks of the commissioned goods, the cost of the materials provided to the producing establishment, the commission fee paid and the value of any other intermediate inputs related to the commission transaction. If the client is not a manufacturing establishment, no data are reported by the client.

The number of working proprietors, working partners, permanent, part-time, temporary and casual employees, and managerial and executive employees working for an establishment during the last pay period ending in June each year. Employees absent on paid or prepaid leave are included, as are employees on workers' compensation who continue to be paid through the payroll system. Non-salaried directors, self-employed persons such as consultants, contractors and persons paid solely by commission without a retainer, and volunteer workers are excluded.

A unit covering all the operations in Australia of one or more legal entities under common ownership and/or control. It covers all the operations in Australia of legal entities which are related in terms of the current Corporations Law (as amended by the Corporations Legislation Amendment Act 1991). These may be legal entities such as trusts and partnerships as well as companies. Majority ownership is not required for control to be exercised.

The establishment is the smallest accounting unit of a business, within a State or Territory, controlling its productive activities and maintaining a specified range of

## Establishment continued

## Establishments that do not <br> export

Establishments with exports of more than $50 \%$ of sales

Establishments with exports up to and including $50 \%$ of sales

## Funding by Federal, State or Local Governments for operational costs

Industry class

## Industry gross product (IGP)

detailed data i.e. the data needed to compile turnover, opening and closing inventories, purchases and transfers in, motor vehicle running expenses, freight and cartage expenses, commission expenses, rent, leasing and hiring expenses, and repair and maintenance expenses. In general, an establishment covers all operations at a physical location, but may consist of groups of locations provided they are within the same State or Territory. The majority of establishments operate at one location only.

Establishments that reported no exports (either by their business unit or for them by an agent) of goods that they produced.

Establishments that reported exports (either by their business unit or for them by an agent) of more than $50 \%$ of sales and transfers out of goods for sale that they produced.

Establishments that reported exports (either by their business unit or for them by an agent) of up to and including $50 \%$ of sales and transfers out of goods for sale that they produced.

For an individual establishment, this represents the percentage of the total sales and transfers out of goods for sale produced by the establishment (or for it on commission) which are exported (or are intended for export) outside Australia by the business unit or by its agent. In table 4, the ratio is calculated by dividing the total value of goods exported by the total value of sales and transfers out of goods for sale produced by all establishments, not just the aggregated value for those units which exported.

Funding by Federal, State or Local Governments for operational costs (e.g. wages and salaries, rent). Included are bounties, subsidies, export grants and apprenticeship schemes.

Within ANZSIC, there is a structure comprising four levels ranging from industry division (broadest level) to the industry class (finest level). At the industry class level, the activities are narrowly defined and recognised by a four-digit code, e.g. Industry Class 2331 for Pulp, paper and paperboard manufacturing. Usually, an activity is primarily confined to one class. However, some activities may be primary to more than one class.

For periods prior to 1997-98, estimates of IGP represented the measure of the contribution by manufacturing industries to gross domestic product (GDP). However, commencing with estimates for 1997-98 following introduction of new international standards for measuring economic variables, IGP has been replaced by the variable industry value added (IVA) for the purpose of measuring industry contribution to GDP.

The relationship between IVA estimates and IGP estimates is:
IVA
plus Intellectual property royalty expenses
less Intellectual property royalty income
less Computer software expenses not capitalised by the business
less Selected indirect taxes (For manufacturing industries, the main types are fringe benefits tax, payroll tax, land rates and land taxes.)
equals IGP
This is the intermediate level within the manufacturing industry division of ANZSIC and is recognised by a three-digit code, e.g. industry group 233 for Paper and paper product manufacturing. It gives more detail than the industry subdivision and is created in a way that groups like industry classes together.

Industry subdivision

This is the broadest level category within the manufacturing industry division of ANZSIC and is recognised by a two-digit code, e.g. industry subdivision 23 for

## Industry subdivision continued

## Industry value added (IVA)

Industry value added (IVA) per person employed

Intermediate inputs

Wood and paper product manufacturing. Industry subdivisions are built up from industry groups which, in turn, are built up from industry classes. The following list gives the manufacturing industry subdivision codes and their descriptions:

21 Food, beverage and tobacco mfg
22 Textile, clothing, footwear and leather mfg
23 Wood and paper product mfg
24 Printing, publishing and recorded media
25 Petroleum, coal, chemical and associated product mfg
26 Non-metallic mineral product mfg
27 Metal product mfg
Machinery and equipment mfg
29 Other manufacturing
IVA represents the value added by an industry to the intermediate inputs used by the industry. Commencing with estimates for 1997-98, IVA has replaced industry gross product (IGP) as the measure of the contribution by manufacturing industries to gross domestic product. See the entry for industry gross product for an explanation of the differences between IVA and IGP.

The derivation of IVA is as follows:
Turnover (new standards)
plus Closing inventories
less Opening inventories
less Intermediate input expenses (for details, see the entry for operating expenses)
equals IVA
However, it should be noted that IVA is not a measure of operating profits before tax. Wages, salaries and most other labour costs are not taken into account in its calculation and nor are most insurance premiums, interest expenses or depreciation and a number of lesser expenses (see the entry for operating expenses for further detail).

IVA of manufacturing establishments which operated during the year ended 30 June divided by employment at the end of June in the same year.

Intermediate inputs consist of materials and certain services which are used up in the production process. Definitions of relevant component items are also included in this Glossary. It is calculated as:

Intermediate input expenses (for details, see
the entry for operating expenses)
plus Opening inventories
less Closing inventories
Location A location is a physical unit of the establishment. It consists usually of an unbroken physical area or site, occupied by an establishment, at which, or from which, the establishment engages in productive activity on a relatively permanent basis. An establishment can consist of one or more locations. In specified circumstances, non-contiguous sites occupied by the same establishment can be combined to form a location.

Management unit

The management unit is the highest-level unit within a business, having regard to industry homogeneity, for which accounts are maintained; in nearly all cases, it coincides with the legal entity owning the business (that is, company, partnership, trust, sole operator, etc.). In the case of large diversified businesses, however, there may be more than one management unit, each coinciding with a

## Management unit continued

Manufacturing establishment

## Manufacturing management

unit
'division' or 'line of business'. A division or line of business is recognised where separate and comprehensive accounts are compiled for it.

An establishment predominantly engaged in manufacturing activities. The data collected for such establishments cover all activities of the establishment (including non-manufacturing activities). Conversely, there are some establishments predominantly engaged in non-manufacturing activities which also undertake limited manufacturing activities and which are excluded.

A management unit predominantly engaged in manufacturing activities. The data collected for such management units cover all activities of the management unit (including in respect of non-manufacturing activities). Conversely, there are some management units predominantly engaged in non-manufacturing activities which have establishments engaged in manufacturing activities and which are excluded.

## Opening inventories The value of all inventories of finished goods, work-in-progress, raw materials,

 fuels, containers and packaging as at the beginning of the reference period.For the purposes of calculating economic and accounting variables for manufacturing industries, operating expenses incurred by businesses are divided into several categories. However, some expenses are excluded entirely from all such calculations. These expenses are extraordinary expenses, capitalised expenses, income tax and other direct taxes, sales taxes and excise payable to Governments, capital repayments or losses on asset sales, dividends, donations or foreign exchange losses.

Remaining expenses are categorised as follows:

## Intermediate input expenses

Intermediate input expenses cover the major expenses incurred by manufacturers in producing and distributing goods and services produced (except labour costs), namely:

- purchases and transfers in of materials, components, containers and packaging materials, electricity, fuels and water, and purchases of goods for resale
- motor vehicle running expenses, freight and cartage expenses, repair and maintenance expenses
- rent, leasing and hiring expenses (except for finance lease payments)
- contract, subcontract and commission expenses

Also included in the calculation of intermediate inputs are advertising expenses, audit and other accounting expenses, bank fees and charges (except interest), cleaning expenses, environmental protection expenses, intellectual property royalty expenses, legal fees, management fees, paper, printing and stationery expenses, postal and telecommunication expenses, staff training expenses, and travelling, accommodation and entertainment expenses.

Excluded from this category are selected labour costs and other operating expenses as defined below:

## Selected labour costs

Wages and salaries including provision expenses for employee entitlements
Employer contributions to superannuation funds
Workers' compensation costs
Payroll tax and Fringe benefits tax

## Other operating expenses

This group of expenses is not included in the calculation of the above economic variables but is included in the calculation of the accounting variable operating profit before tax. Included in this group of expenses are bad and doubtful debts,

## Operating expenses continued

## Own account capital work

## Purchases and transfers in

## Reference period

Sales and transfers out of
goods

Sales and transfers out of goods produced (table 4)

## Service income

computer software expenses not capitalised by businesses, depreciation and amortisation, insurance premiums (except workers' compensation and compulsory third party motor vehicle insurance premiums), interest expenses, land rates and taxes, mineral/petroleum expenses not capitalised by businesses, and natural resource royalties expenses.

Capitalised work done by the employees or proprietors of an establishment for use by the business unit or for rental or lease to other businesses. The main types of work are manufacturing, constructing, installing or repairing assets and development of computer software. This work is valued at the capitalised costs of the materials and the wages and salaries involved.

Conceptually, this item should also include own account mineral exploration and own account production of literary, entertainment or artistic originals. However, these activities are relatively unimportant for manufacturers and have not been measured for manufacturing industries.

Purchases Purchases of materials, components, containers and packaging materials, electricity, fuels and water, and of goods for resale. The purchase of parts and fuel for motor vehicles is excluded.

Purchases of materials, components, containers and packaging materials, electricity, fuels and water, and of goods for resale, plus transfers in of goods from other establishments of the same business for further processing, assembly, installation or for sale or resale. Transfers in are valued, for statistical purposes, at prices commensurate with the prices which would have been paid if the establishments concerned had been under separate ownership, i.e. at commercial selling price. The purchase of parts and fuel for motor vehicles is excluded.

Businesses are asked to report data for the financial year ended 30 June. However, if a business has a different financial year, it is asked to report for the $12-$ month period which ends between 1 October of the previous year and 30 September of the current year. This period is then used as a substitute for the financial year ended 30 June. For example, for the 1998-99 collection, a business may have reported data for the year ended 31 December 1998.

Includes sales of goods whether or not produced by the business and sales of goods produced for the business on a commission basis (see the entry for commission manufacturing). Also includes transfers of goods to other establishments of the same business or to related businesses and installation and delivery charges not separately invoiced to customers. Progress payments relating to long term contracts are included if they are billed in the period. Sales are valued net of discounts given and exclusive of excise, sales tax and duties receivable on behalf of the Government. Exports are valued f.o.b. (export freight charges are excluded). Transfers to other establishments of the same business are valued, for statistical purposes, at commercial value (i.e. the value which would have applied had the establishments concerned been under separate ownership).

Sales as defined in sales and transfers out of goods, plus transfers out of goods produced by this establishment for sale. Transfers to other establishments of the same business are valued, for statistical purposes, at commercial value (i.e. the value which would have applied had the establishments concerned been under separate ownership).

Income received from service activities. Included are income from work done or sales made on a commission basis, income from repair, maintenance or servicing, installation and delivery charges separately invoiced to customers, advertising income and management fees/charges received from related or unrelated

## Service income continued

Turnover

## Turnover per person employed

 Wages and salaries
## Wages and salaries to turnover ratio

businesses. Service income is valued net of discounts given. For periods commencing with 1997-98, under new international standards, income from intellectual property royalties and rent, leasing and hiring income (except from finance leases) have also been classified as service income. Rent, leasing and hiring income is income derived from the ownership of land, buildings, vehicles, machinery or equipment, excluding any income from finance leases.

For further explanation on the treatment of commission manufacturing activities, see the entry for commission manufacturing.

Turnover comprises sales (exclusive of excise and sales tax) of goods whether or not produced by the establishment and transfers of goods to other establishments of the same business, plus service income, funding by Federal, State or Local Governments for operational costs, and own account capital work. Definitions of the various component items appear in this Glossary.

Excluded from turnover are interest income, income from natural resource royalties, funding by Federal, State or Local Governments for specific capital items, dividends, and receipts from the sale of fixed tangible assets.

There are some conceptual differences between turnover as estimated in this publication and turnover as defined by the new international standards. These differences are explained as part of the definition of the component item own account capital work. Full compliance with the new standards would make very little difference to estimates of turnover.

Note (a): The above definition of turnover is used in calculating the variable industry value added. A slightly different definition of turnover was used prior to 1997-98 to calculate the now superseded variable industry gross product. This earlier definition excluded income from intellectual property royalties and the value of computer software developed in-house for use by the business or for rental or lease to other businesses.

Note (b): Transfers to other establishments of the same business referred to in the definition of turnover are valued, for statistical purposes, at prices commensurate with the prices which would have been received if the establishments concerned had been under separate ownership, i.e. at commercial selling price. A significant proportion of the commodities manufactured by some industries is manufactured on commission for non-manufacturing businesses from materials owned and supplied by those businesses. As a consequence, the turnover figures do not reflect the gross value of those commodities but only the commission earned relating to them.

Turnover of manufacturing establishments which operated during the year ended 30 June divided by employment at the end of June in the same year.

The gross wages and salaries (including capitalised wages and salaries) of all employees of the establishment. The item includes severance, termination and redundancy payments, but excludes reimbursements or allowances to employees for travel, entertainment, etc. For the 1995-96 collection only, provision expenses for employee entitlements (e.g. provisions for annual leave and leave bonus, long service leave, sick leave, and severance, termination and redundancy payments) are excluded. The drawings of working proprietors are also excluded.

The wages and salaries paid by manufacturing establishments which operated during the year ended 30 June as a proportion of the turnover of manufacturing establishments which operated during the same year.

    (g) Turnover divided by the number of persons employed at the end of June.
    (h) Industry value added divided by the number of persons employed at the end of June.
    (i) From the 1997-98 manufacturing collection and onwards, new international standards apply to the calculation of turnover. For more details see paragraphs 14 and 15 of the Explanatory Notes.
    (j) From the 1997-98 manufacturing collection and onwards, industry value added (IVA) replaces industry gross product (IGP) as the measure of an industry's contribution to gross domestic product. IGP has also been shown for 1997-98. For more details, see paragraphs 16 and 17 of the Explanatory Notes.
    (k) For 1995-96, excludes provision expenses for employee entitlements. See paragraph 19 of the Explanatory Notes.
