## 

Private sector houses approved

- For further information about these statistics, contact Merv Leaker on 0882377585 , or for information about related unpublished statistics see page 26 of this publication.

## APRIL KEY FIGURES

## APRIL KEY POINTS

## TREND ESTIMATES

- The trend for private sector houses has increased by $1.3 \%$ in April and $17.9 \%$ over the last year.
- The trend for other dwelling units has increased by $7.5 \%$ over the last three months and $18.3 \%$ over the last year
- The trend for total dwelling units has increased by $17.7 \%$ over the last year even though there was a relatively flat period early in 1997. Growth occurred in April in New South Wales (1.5\%), Victoria (4.2\%), Queensland (0.7\%) and Western Australia (2.5\%).
- The trend for the value of non-residential building has increased by $27.2 \%$ over the last five months and $33.6 \%$ over the last year. This is a volatile series which is heavily influenced by the timing and size of large projects. This month there has been a large office project in New South Wales.

## SEASONALLY ADJUSTED ESTIMATES

- The seasonally adjusted estimate of private sector houses has risen by $8.3 \%$ over the last two months following decreases in the previous two months. It is at the highest level since November 1994.
- The seasonally adjusted estimate for other dwelling units has increased by $48.2 \%$ over the last two months and follows decreases in the previous three months. It is at its highest level since October 1994.

## NOTES

## VALUEOFBUILDING APPROVED

VALUE OF TOTAL BUILDING

VALUE OF RESIDENTIAL BUILDING

The trend has increased for the fifth consecutive month and is $28.4 \%$ above the level of a year ago. Growth will continue unless the seasonally adjusted estimate for May falls by more than $18.1 \%$ (the average monthly movement is $8.7 \%$ ).

The trend has increased steadily since early 1996 and has shown growth of $24.7 \%$ over the last year. Growth will continue unless the seasonally adjusted estimate for May falls by more than $13.7 \%$ (the average monthly movement is $5.4 \%$ ).

The trend has grown strongly since late 1994 but is showing considerable volatility over the last year. Growth will continue unless the seasonally adjusted estimate for May falls by more than $22 \%$.

## VALUE OF BUILDING APPROVED

## AVERAGE 1989-90 PRICES

MARCH QUARTER 1998

QUARTERLY VALUE OF
BUILDING APPROVED
(at average 1989-90 prices)

Changes in the trend estimates of value of building approvals in the March Quarter 1998 at average 1989-90 prices are summarised below.

## TREND ESTIMATES

| Dec Qtr 1997 to | Mar Qtr 1997 to |
| :--- | :--- |
| Mar Qtr 1998 | Mar Qtr 1998 |
| \% change | \% change |

| New residential building | 3.6 | 16.2 |
| :--- | ---: | ---: |
| Alterations and additions <br> to residential buildings | 6.3 | 13.8 |
| Non-residential building | -3.3 | 0.5 |
| Total building | 1.8 | 10.2 |

The trend for the value of total building approved at average $1989-90$ prices has shown strong growth since early 1996 and has increased by $10.2 \%$ over the last year. New residential building experienced $16.2 \%$ growth over the last year whereas non-residential building only grew by $0.5 \%$ because of a fall of $3.3 \%$ in the March quarter counteracting the growth in the previous quarters

## EFFECT OF NEW SEASONALLY ADJUSTED ESTIMATES ON TREND ESTIMATES

Readers should exercise care when interpreting trend estimates. The last six trend estimates, in particular, are likely to be revised when new seasonally adjusted estimates become available.

## TREND REVISIONS

Generally, the greater the volatility of the original series, the larger the size of the revisions to trend estimates. Analysis of the building approval original series has shown that they can be revised substantially. As a result, some months can elapse before turning points in the trend series are reliably identified.

The graphs and tables which follow present the effect of two possible scenarios on the previous trend estimates: that the May seasonally adjusted estimate is higher than the April estimate by $3 \%$ for the number of private sector houses approved and $10 \%$ for other dwelling units approved; and that the May seasonally adjusted estimate is lower than the April estimate by $3 \%$ for the number of private sector houses approved and $10 \%$ for other dwelling units approved. These percentages were chosen because they represent the average absolute monthly percentage change for these series over the last ten years.

## EXPLANATORYNOTES

1 This publication presents monthly details of building work approved.
2 Statistics of building work approved are compiled from:

- permits issued by local government authorities;
- contracts let or day labour work authorised by Commonwealth, State, semi-government and local government authorities;
- major building activity in areas not subject to normal administrative approval e.g. building on remote mine sites.

3 The scope of the survey comprises the following activities:

- construction of new buildings
- alterations and additions to existing buildings
- approved non-structural renovation and refurbishment work
- approved installation of integral building fixtures

From July 1990, the statistics include:

- all approved new residential building valued at $\$ 10,000$ or more
- approved alterations and additions to residential building valued at $\$ 10,000$ or more
- all approved non-residential building jobs valued at $\$ 50,000$ or more.

Excluded from the statistics is:

- construction activity not defined as building (e.g. construction of roads, bridges, railways, earthworks, etc.). Statistics for this activity can be found in Engineering Construction Activity, Australia (8762.0).

4 Value data are derived by aggregation of the estimated value of building work when completed as reported on approval documents. Such value data excludes the value of land and landscaping but includes site preparation. These estimates are usually a reliable indicator of the completed value of 'houses'. However, for 'other residential buildings' and 'non-residential buildings', these estimates can differ significantly from the completed value of the building.

5 Building ownership is classified as either public or private sector and is based on the sector of intended owner of the completed building at the time of approval. Residential buildings constructed by private sector builders under government housing authority schemes are classified as public sector when the authority has contracted, or intends to contract, to purchase the building on or before completion.

6 Building approvals are classified both by the Type of Building (e.g. 'house', 'factory') and by the Type of Work involved (e.g. 'new', 'alterations' and 'additions'). These classifications are often used in conjunction with each other to describe building approvals in this publication.

7 The Type of Building classification refers to the intended major function of a building. A building which is ancillary to other buildings or forms a part of a group of related buildings is classified to the function of the building, not to the function of the group as a whole.
8 An example is the treatment of building work approved for a factory complex. For instance, a detached administration building would be classified to Offices, a detached cafeteria building to Shops, while the factory buildings would be classified to Factories.

## EXPLANATORYNOTES

BUILDING CLASSIFICATIONS continued

9 An exception to this rule is the treatment of group accommodation buildings. For example, a student accommodation building on a university campus would be classified to Education.

10 In the case of a large multi-function building, i.e. a single large physical building which, at the time of approval is intended to have more than one purpose (e.g. a hotel/shops/casino project), the ABS endeavours to split the approval details according to each main function.

11 Where this is not possible because separate details cannot be obtained, the building is classified to the predominant function of the building on the basis of the function which represents the highest proportion of the total value of the project.

12 The Type of Work classification refers to the building activity carried out: New; Alterations and additions; or Conversion. See the Glossary for definitions of these terms. Prior to the January 1998 issue of this publication, Conversions were published as part of a category called 'Conversions, etc.'. From the January 1998 issue onwards, Conversion jobs are shown separately in tables 7, 8, 12 and 13. However, in other tables they are included within existing categories, as follows: in tables 1 and 2 they are included in the appropriate Type of Building category, and in tables 3, 4 and 10 they are included in the 'Alterations and additions to residential buildings' category.

13 Seasonal adjustment is a means of removing the estimated effects of seasonal variation from the series so that the effects of other influences can be more clearly recognised.

14 In the seasonal adjustment of series, account has been taken of both normal seasonal factors and 'trading day' effects arising from the varying numbers of Sundays, Mondays, Tuesdays, etc. in the month. Adjustment has also been made for the influence of Easter which may affect the March and April estimates differently.

15 Seasonal adjustment does not remove from the series the effect of irregular or non-seasonal influences (e.g. the approval of large projects or a change in the administrative arrangements of approving authorities)

16 Some of the component series have been seasonally adjusted independently. Therefore, the adjusted components may not add to the adjusted totals.

17 As happens with all seasonally adjusted series, the seasonal factors are reviewed annually to take account of each additional year's data. The timing of this review may vary and when appropriate will be notified in the 'Data Notes' section of this publication.

## EXPLANATORYNOTES

## TREND ESTIMATES

UNPUBLISHED DATA

RELATED PUBLICATIONS

18 Smoothing seasonally adjusted series reduces the impact of the irregular component of the seasonally adjusted series and creates trend estimates. For monthly series, these trend estimates are derived by applying a 13-term Henderson-weighted moving average to all months of the respective seasonally adjusted series except the last six months. Trend series are created for the last six months by applying surrogates of the Henderson moving average to the seasonally adjusted series. For the quarterly, constant prices, trend series shown in table 7 , the trend estimates are derived by applying a 7 -term Henderson-weighted moving average to all quarters of the respective seasonally adjusted series except the last two quarters. Trend series are created for these last three quarters by applying surrogates of the Henderson moving average seasonally adjusted series. For further information, see A Guide to Interpreting Time Series-Monitoring 'Trends': an Overview (1348.0) or contact the Assistant Director, Time Series Analysis on (02) 62526345.

19 While the smoothing techniques described in paragraph 18 enables trend estimates to be produced for the latest few periods, it does result in revisions to the trend estimates as new data becomes available. Generally, revisions become smaller over time and, after three months, usually have a negligible impact on the series. Revisions to the original data and re-analysis of seasonal factors may also lead to revisions to the trend.

20 Constant price estimates measure changes in value after the direct effects of price changes have been eliminated. The deflators used to revalue the current price estimates are derived from the same price data underlying the deflators compiled for the dwelling and non-dwelling construction components of the national accounts aggregate 'Gross fixed capital expenditure'.

21 Estimates at constant prices are subject to a number of approximations and assumptions. For more information on the nature and concepts of constant price estimates, see Chapter 4 of Australian National Accounts: Concepts, Sources and Methods (5216.0). Monthly value data at constant prices are not available.

22 The ABS can also make available certain building approvals data which are not published. Where the data cannot be provided by telephone, it can be provided via fax, photocopy, computer printout, floppy disk and email. A charge may be made for providing unpublished data in these forms. For details on this consultancy service, please see page 26 .

## Alterations and additions

Alterations and additions to residential buildings

Building activity carried out on existing buildings. Includes adding to or diminishing floor area, altering the structural design of a building and affixing rigid components which are integral to the functioning of the building.

Alterations and additions carried out on existing residential buildings, which may result in the creation of new dwelling units. See also Explanatory Notes paragraph 12 .

House
A building is a rigid, fixed and permanent structure which has a roof. Its intended purpose is primarily to house people, plant, machinery, vehicles, goods or livestock. An integral feature of a building's design is the provision for regular access by persons in order to satisfy its intended use.

Building activity which converts a non-residential building to a residential building, e.g. conversion of a warehouse to residential apartments. Conversion is considered to be a special type of alteration, and these jobs have been separately identified as such from the July 1996 reference month, though they have only appeared separately in this publication from the January 1998 issue. Prior to that issue, conversions were published as part of the 'Conversions, etc.' category or included elsewhere within a table. Prior to July 1996, Table 7 includes the number of Conversions in the 'Alterations and additions to residential buildings' category while Table 8 includes the value of Conversions in the 'Alterations and additions to residential buildings, creating dwellings' category. See also Explanatory Notes paragraph 12.

A dwelling unit is a self-contained suite of rooms, including cooking and bathing facilities and intended for long-term residential use. Regardless of whether they are self-contained or not, units within buildings offering institutional care (e.g. hospitals) or temporary accommodation (e.g. motels, hostels and holiday apartments) are not defined as dwelling units. Such units are included in the appropriate category of non-residential building approvals. Dwelling units can be created in one of four ways: through new work to create a residential building; through alteration/addition work to an existing residential building; through either new or alteration/addition work on non-residential building or through conversion of a non-residential building to a residential building.

Includes schools, colleges, kindergartens, libraries, museums and universities.
Includes clubs, cinemas, sport and recreation centres.

Includes paper mills, oil refinery buildings, brickworks and powerhouses.
Dwellings not having their own private grounds and usually sharing a common entrance, foyer or stairwell.

Includes hospitals, nursing homes, surgeries, clinics and medical centres.
Includes hostels, boarding houses, guest houses, and holiday apartment buildings.

A house is a detached building primarily used for long term residential purposes. It consists of one dwelling unit. For instance, detached 'granny flats' and detached dwelling units (eg. caretakers residences) associated with a non-residential building are defined as houses.

## Miscellaneous <br> New building work

New other residential buildings

New residential

## Non-residential building

Other dwellings

Other residential building

Residential building

Semi-detached, row or terrace houses, townhouses
Other business premises

Includes justice and defence buildings, welfare and charitable homes, prisons and reformatories, maintenance camps, farming and livestock buildings, veterinary clinics, child-minding centres, police stations and public toilets.

Building activity which will result in the creation of a building which previously did not exist.

Building activity which will result in the creation of a residential building other than a house, which previously did not exist.

Building activity which will result in the creation of any residential building (house or other residential) which previously did not exist.

A non-residential building is primarily intended for purposes other than long term residential purposes. Note that, on occasions, one or more dwelling units may be created through non-residential building activity. Prior to the January 1998 issue of this publication, they have been included in the 'Conversions, etc.' column in tables showing dwelling units approved. They are now identified separately (e.g. see table 7). However, the value of these dwelling units cannot be separated out from that of the non-residential building which they are part of, therefore the value associated with these remain in the appropriate Non-residential category.

Offices Includes banks, post offices and council chambers.
Includes warehouses, service stations, transport depots and terminals, electricity substation buildings, telephone exchanges, broadcasting and film studios.

Includes all dwellings other than houses. They can be created by: the creation of new other residential buildings (e.g. flats); alteration/addition work to an existing residential building; either new or alteration/addition work on non-residential building; conversion of a non-residential building to a residential building creating more than one dwelling unit.

An other residential building is a building other than a house primarily used for long-term residential purposes. An other residential building contains more than one dwelling unit. Other residential buildings are coded to the following categories: semi-detached, row or terrace house or townhouse with one storey; semi-detached, row or terrace house or townhouse with two or more storeys; flat, unit or apartment in a building of one or two storeys; flat, unit or apartment in a building of three storeys; flat, unit or apartment in a building of four or more storeys; flat, unit or apartment attached to a house; other/number of storeys unknown. The latter two categories are included with the semi-detached, row or terrace house or townhouse with one storey category in table 9 of this publication.

Includes convents, churches, temples, mosques, monasteries and noviciates.
A residential building is a building consisting of one or more dwelling units. Residential buildings can be either houses or other residential buildings.

Dwellings having their own private grounds with no other dwellings above or below.

Shops Includes retail shops, restaurants, taverns and shopping arcades.

The ABS collects detailed building information, of which only a relatively small amount is published. Some of the unpublished data available from just the monthly Building Approvals collection includes:

- material of outer walls, roofs and floors of new houses
- average value of new dwelling units
- floor area of new houses
- information for small geographical regions

We can provide data as printed tables or electronic files (e.g. text, spreadsheets). Our consultants can discuss the availability of data you are interested in and provide you with a quote for supplying information tailored to your needs. It is simply a matter of either contacting them via email, fax or telephone with your data request.

The following example illustrates a potential use of our building approvals data and provides an insight into the type of data and detail available.

A carpet retailer wanted to know the 5 Statistical Local Areas (SLAs) in NSW which had the highest number of new houses approved over the latest 12 month period, together with the average value of new houses for each SLA. The purpose was to help determine which areas to target for a marketing campaign.

The ABS provided the company with a table containing the number of new houses approved and their average value for each of the top 5 areas. In addition, it was suggested that another useful data item might be indicative data on average floor area. The client agreed it would be useful to help decide on which areas to concentrate and asked for the State total for NSW to be included for comparison. The data could also be used to help decide which areas to target in view of the locations of their retail outlets. The table provided appears below.

NEW HOUSES APPROVED, Top 5 SLAs In NSW, 12 Months to December 1997

|  | Houses | Average <br> value | Average <br> floor area(a) |
| :--- | :--- | :--- | :---: |
| SLA | No. | $\$$ OOO | sq. metres |
| Liverpool | 2089 | 106.2 | 226.4 |
| Blacktown | 1672 | 106.7 | 208.7 |
| Baulkam Hills | 1249 | 157.7 | 301.8 |
| Auburn(b) | 1118 | 129.0 | 249.4 |
| Wyong | 1080 | 98.9 | n.a. |
| Total NSW | 27702 | $\mathbf{1 1 9 . 7}$ | $\mathbf{2 2 0 . 3}$ |

(a) The average of those house approvals that
(b) Note that most of these new houses approved are part of the Olympic Games village.

The client was also made aware of the availability of data from the 1996 Census of Population and Housing, which can be used to create a demographic profile of the areas of interest. The data available is extensive and includes distributions by age, income ranges and occupation. This data can be cross tabulated to give a detailed picture of the socio-economic characteristics of the areas of interest and hence influence the marketing approach.

If you would like to discuss your data needs, please contact Tamra Nitschke on
(08) 82377655 or Tony Bammann on (08) 82377316 or fax requests on
(08) 82377620 .

The ABS publishes a wide range of information on Australia's economic and social conditions. A catalogue of publications and products is available from any of our offices (see below).

## INFORMATION CONSULTANCY SERVICES

Information tailored to special needs of clients can be obtained from the Information Consultancy Service available at ABS Offices (see below).

## ABS PRODUCTS

A large number of $A B S$ products is available from the $A B S$ Bookshops (see below). The ABS also provides a subscription service - you can telephone the ABS Subscription Service Australia wide toll free on 1300366323.

## ELECTRONIC SERVICES

A large range of data is available via on-line services, diskette, magnetic tape, tape cartridge and CD ROM. For more details about our electronic data services, contact any ABS office (see below) or e-mail us at:
