| Dwelling units approved |  |  |  |
| Private sector houses | 9898 | 11.0 | 62.8 |
| Total dwelling units | 13292 | 6.3 | 39.1 |

## JULY KEY POINTS

## TREND ESTIMATES

- The trend estimate for total dwelling units approved rose by $6.3 \%$ in July 2001, following similar rises in each of the preceding three months.
- The trend estimate for private sector houses approved rose by $8.0 \%$ in July 2001, as a result of strong rises in the seasonally adjusted estimate over the last three months.
- The trend estimate for other dwellings approved rose by $2.2 \%$ in July 2001, following similar rises in May and June.

## SEASONALLY ADJUSTED ESTIMATES

- The seasonally adjusted estimate for total dwelling units approved rose by $6.3 \%$ in July 2001, driven by a further rise in private sector houses.
- The seasonally adjusted estimate for private sector houses approved rose by $11.0 \%$ in July 2001, following a $12.4 \%$ rise in June and a $24.8 \%$ rise in May.
- Seasonally adjusted estimates for private sector houses in the larger States grew strongly in the three months to July 2001. Compared with the previous three months (February to April), estimates rose in Queensland by $62.6 \%$, in Western Australia by $47.4 \%$, in South Australia by $43.6 \%$, in Victoria by $40.4 \%$, and in New South Wales by $29.8 \%$.
- The seasonally adjusted estimate for other dwellings fell by 9.1\% in July 2001.

## VALUE OF BUILDING APPROVED

VALUE OF TOTAL BUILDING
The trend estimate of the value of total building approved has risen over the last ten months. The trend estimate rose by $4.0 \%$ in July 2001.

VALUE OF RESIDENTIAL BUILDING The trend estimate of the value of residential building approved has risen over the last six months. The trend estimate rose by 5.9\% in July 2001.

VALUE OF NON-RESIDENTIAL
The trend estimate of the value of non-residential building approved has risen in the last two months, following three months of decline. The trend estimate rose by $0.7 \%$ in July 2001.

## VALUE OF BUILDING APPROVED

## CHAIN VOLUME MEASURES

JUNE QTR 2001

2000-2001 FINANCIAL YEAR

Trend estimates for the value of building approved in the Jun Qtr 2001 in chain volume measures are summarised below. (See Table 14).

TREND ESTIMATES

|  | Jun Qtr 2001 | Mar Qtr 2001 to <br> Jun Qtr 2001 <br> \% change | Jun Qtr 2000 to <br> Jul Qtr 2001 <br> \% change |
| :--- | :---: | :---: | :---: |
| \$m | New residential building | 3879.1 | 8.2 |

The total value of building approved in volume terms fell by $19.9 \%$ to $\$ 29,985.2$ million in 2000-2001 compared to 1999-2000. This was due to a large fall (33.9\%) in the value of new residential building.

ANNUAL MOVEMENT: ORIGINAL SERIES

|  | 2000-2001 | $\begin{aligned} & \text { 1997-1998 to } \\ & \text { 1998-1999 } \end{aligned}$ | $\begin{aligned} & \text { 1998-1999 to } \\ & \text { 1999-2000 } \end{aligned}$ | $\begin{aligned} & \text { 1999-2000 to } \\ & \text { 2000-2001 } \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: |
|  | \$m | \% change | \% change | \% change |
| New residential building | 14357.6 | 3.5 | 16.2 | -33.9 |
| Alterations and additions to residential buildings | 2883.2 | -5.4 | 13.9 | -18.4 |
| Non-residential building | 12744.4 | -15.8 | -6.1 | 4.6 |
| Total building | 29985.2 | -5.5 | 7.5 | -19.9 |

## D WELLING UNITS APPROVED: State Trends

NEW SOUTH WALES

VICTORIA

## QUEENSLAND

## SOUTH AUSTRALIA

WESTERN AUSTRALIA

The trend estimate for total dwelling units approved has risen over the last five months.

The trend estimate for total dwelling units approved has risen over the last nine months.

The trend estimate for total dwelling units approved has risen strongly over the last six months.

The trend estimate for total dwelling units approved has risen over the last ten months, with strong rises in the last four months.

The trend estimate for total dwelling units approved has risen strongly over the last six months.

# EFFECT OF NEW SEASONALLY ADJUSTED ESTIMATES ON TREND ESTIMATES 

Readers should exercise care when interpreting trend estimates. The last six trend estimates, in particular, are likely to be revised when new seasonally adjusted estimates become available.

## TREND REVISIONS

Generally, the greater the volatility of the original series, the larger the size of the revisions to trend estimates. Analysis of the building approval original series has shown that they can be revised substantially. As a result, some months can elapse before turning points in the trend series are reliably identified.

The graphs and tables which follow present the effect of two possible scenarios on the previous trend estimates: that the August seasonally adjusted estimate is higher than the July estimate by $3 \%$ for the number of private sector houses approved and $11 \%$ for other dwelling units approved; and that the August seasonally adjusted estimate is lower than the July estimate by $3 \%$ for the number of private sector houses approved and $11 \%$ for other dwelling units approved. These percentages were chosen because they represent the average absolute monthly percentage change for these series over the last ten years.

## EXPLANATORYNOTES

INTRODUCTION

SCOPE AND COVERAGE

1 This publication presents monthly details of building work approved.
2 Statistics of building work approved are compiled from:

- permits issued by local government authorities and other principal certifying authorities;
- contracts let or day labour work authorised by Commonwealth, State, semi-government and local government authorities;
- major building approvals in areas not subject to normal administrative approval e.g. building on remote mine sites.

3 The scope of the survey comprises the following:

- construction of new buildings;
- alterations and additions to existing buildings;
- approved non-structural renovation and refurbishment work;
- approved installation of integral building fixtures.

4 Excluded from the statistics is construction activity not defined as building (e.g. roads, bridges, railways, earthworks, etc.). Statistics for this activity can be found in Engineering Construction Activity, Australia (Cat. no. 8762.0).

5 From July 1990, the statistics include:

- all approved new residential building valued at $\$ 10,000$ or more;
- approved alterations and additions to residential building valued at $\$ 10,000$ or more;
- all approved non-residential building jobs valued at $\$ 50,000$ or more.

6 Statistics on the value of building work approved are derived by aggregating the estimated 'value of building work when completed' as reported on building approval documents provided to local councils or other building approval authorities. Conceptually these value data should exclude the value of land and landscaping but include site preparation costs. These estimates are usually a reliable indicator of the completed value of 'houses'. However, for 'other residential buildings' and 'non-residential buildings', they can differ significantly from the completed value of the building as final costs and contracts have not been established before council approval is sought and gained.
7 The ABS generally accepts values provided by approving bodies. Every effort is made to ensure data are provided on a consistent basis, however, there may be instances where value reported does not reflect the building completion value. For example, the reported value for most project homes is the contract price, which may include the cost of site preparation and landscaping. In other cases where a builder is contracted to construct a dwelling based on the owner's plans, the value may only be the builder's costs. Some councils do not use the value on approval documents, instead deriving a value based on floor area and type of structure.

8 From July 2000, value data includes the Goods and Services Tax (GST) for residential and non-residential building approvals. The ABS has consulted with councils and other approving authorities to ensure that approval values are reported inclusive of the GST.

## EXPLANATORYNOTES

VALUE DATA
continued In particular, councils that use floor area calculation to derive a value may not have amended their formulae to take account of the GST and other price changes. Where it has been identified by a council or other approving authority that approvals submitted from its jurisdiction are on a GST-exclusive basis, the ABS has made adjustments to the data to ensure that values are consistent with other data collected and are inclusive of GST.

10 As building work approved before 1 July 2000 attracted GST on that portion of the work not completed by 30 June it is likely, but not certain, that the value reported on approvals documents submitted before 30 June included the GST.

11 Building ownership is classified as either public or private sector and is based on the sector of intended owner of the completed building at the time of approval. Residential buildings constructed by private sector builders under government housing authority schemes are classified as public sector when the authority has contracted, or intends to contract, to purchase the building on or before completion.

12 Building approvals are classified both by the Type of Building (e.g. 'house', 'factory') and by the Type of Work involved (e.g. 'new', 'alterations and additions' and 'conversions'). These classifications are often used in conjunction with each other in this publication and are defined in the Glossary.

13 The Type of Building classification refers to the intended major function of a building. A building which is ancillary to other buildings or forms a part of a group of related buildings is classified to the function of the specific building, not to the function of the group as a whole.

14 An example is the treatment of building work approved for a factory complex. For instance, a detached administration building would be classified to Offices, a detached cafeteria building to Shops, while the factory buildings would be classified to Factories. An exception to this rule is the treatment of group accommodation buildings. For example, a student accommodation building on a university campus would be classified to Education.

15 In the case of a large multi-function building which, at the time of approval is intended to have more than one purpose (e.g. a hotel/shops/casino project), the ABS endeavours to split the approval details according to each main function. Where this is not possible because separate details cannot be obtained, the building is classified to the predominant function of the building on the basis of the function which represents the highest proportion of the total value of the project.

16 The Type of Work classification refers to the building activity carried out. Conversion jobs are shown separately in tables 5, 6, 12 and 15. However, in other tables they are included within existing categories, as follows: in tables 1 and 2 they are included in the appropriate Type of Building category, and in tables 3, 4 and 14 they are included in the 'Alterations and additions to residential buildings' category.

## EXPLANATORYNOTES

SEASONAL ADJUSTMENT

TREND ESTIMATES

17 Seasonal adjustment is a means of removing the estimated effects of seasonal variation from the series so that the effects of other influences can be more clearly recognised

18 In the seasonal adjustment of series, account has been taken of both normal seasonal factors and 'trading day' effects arising from the varying numbers of Sundays, Mondays, Tuesdays, etc. in the month. Adjustment has also been made for the influence of Easter which may affect the March and April estimates differently.

19 Seasonal adjustment does not remove from the series the effect of irregular or non-seasonal influences (e.g. the approval of large projects or a change in the administrative arrangements of approving authorities).

20 Some of the component series have been seasonally adjusted independently. Therefore, the adjusted components may not add to the adjusted totals.

21 As happens with all seasonally adjusted series, the seasonal factors are reviewed annually to take account of each additional year's data. The timing of this review may vary and when appropriate will be notified in the 'Data Notes' section of this publication.

22 Smoothing seasonally adjusted series reduces the impact of the irregular component of the seasonally adjusted series and creates trend estimates. For monthly series, these trend estimates are derived by applying a 13-term Henderson-weighted moving average to all months of the seasonally adjusted series except the last six months. Trend series are created for the last six months by applying surrogates of the Henderson moving average to the seasonally adjusted series. For the quarterly chain volume measures (table 14), the trend estimates are derived by applying a 7 -term Henderson-weighted moving average to all quarters of the respective seasonally adjusted series except the last three quarters. Trend series are created for these last three quarters by applying surrogates of the Henderson moving average seasonally adjusted series. For further information, see Information Paper: A Guide to Interpreting Time Series-Monitoring 'Trends': an Overview (Cat. no. 1348.0) or contact the Assistant Director, Time Series Analysis on Canberra 0262526076.

23 While the smoothing techniques described in paragraph 22 enable trend estimates to be produced for the latest few periods, they do result in revisions to the trend estimates as new data becomes available. Generally, revisions become smaller over time and, after three months, usually have a negligible impact on the series. Revisions to the original data and re-analysis of seasonal factors may also lead to revisions to the trend.

24 The ABS considered whether the introduction of the GST would cause a break in the trend series between June and July 2000 for building and construction value data. The ABS concluded that the data were unlikely to experience a significant one-off impact between June and July because values inclusive of GST had been gradually included in the series over that period. Therefore the trend value series was continued to be published as in the past. Users should, however, be cautious when analysing the most recent trend estimates as these are subject to revisions as new monthly data becomes available.

## EXPLANATORYNOTES

CHAIN VOLUME MEASURES

ABS DATA AVAILABLE ON REQUEST

RELATED PUBLICATIONS

25 The chain volume measures appearing in this publication are annually reweighted chain Laspeyres indexes referenced to current price values in a chosen reference year. The reference year is updated annually in the July issue of this publication. While current price estimates reflect both price and volume changes, chain volume estimates measure changes in value after the direct effects of price changes have been eliminated and hence only reflect volume changes. The direct impact of the GST is a price change, and hence is removed from chain volume estimates. Further information on the nature and concepts of chain volume measures is contained in the ABS publication Information Paper: Introduction of Chain Volume Measures in the Australian National Accounts (Cat. no. 5248.0).

26 As well as the statistics included in this and related publications, the ABS may have other relevant data available on request. Inquiries should be made to the National Information and Referral Service on 1300135070.

27 Users may also wish to refer to the following publications:

- Building Activity, Australia (Cat. no. 8752.0-8752.7)
- Building Activity, Australia: Dwelling Unit Commencements (Cat. no. 8750.0)
- Building Approvals (Cat. no. 8731.1-8731.7)
- Construction Work Done, Australia, Preliminary (Cat. no. 8755.0)
- Engineering Construction Activity, Australia (Cat. no. 8762.0)
- House Price Indexes: Eight Capital Cities (Cat. no. 6416.0)
- Housing Finance for Owner Occupation, Australia (Cat. no. 5609.0)
- Price Index of Materials Used in Building Other Than House Building, Six State Capital Cities (Cat. no. 6407.0)
- Price Index of Materials Used in House Building, Six State Capital Cities (Cat. no. 6408.0).

28 While building approvals value series are shown inclusive of GST, this is different to Building Activity (Building Activity, Australia Cat. no. 8752.0, and Construction Work Done, Australia, Preliminary Cat. no.8755.0), in which residential work will be published inclusive of GST and non-residential work exclusive of GST. In the Engineering Construction Survey (Engineering Construction Activity, Australia Cat. no. 8762.0) all values will exclude GST.

29 When figures have been rounded, discrepancies may occur between sums of the component items and totals.

## Alterations and additions

Alterations and additions to residential buildings

Building activity carried out on existing buildings. Includes adding to or diminishing floor area, altering the structural design of a building and affixing rigid components which are integral to the functioning of the building.

Alterations and additions carried out on existing residential buildings, which may result in the creation of new dwelling units. See also Explanatory Notes paragraph 16.

Building A building is a rigid, fixed and permanent structure which has a roof. Its intended purpose is primarily to house people, plant, machinery, vehicles, goods or livestock. An integral feature of a building's design is the provision for regular access by persons in order to satisfy its intended use.

## Conversion

Building activity which converts a non-residential building to a residential building, e.g. conversion of a warehouse to residential apartments. Conversion is considered to be a special type of alteration, and these jobs have been separately identified as such from the July 1996 reference month, though they have only appeared separately in this publication from the January 1998 issue. Prior to that issue, conversions were published as part of the 'Conversions, etc.' category or included elsewhere within a table. See also Explanatory Notes paragraph 16.

Dwelling unit A dwelling unit is a self-contained suite of rooms, including cooking and bathing facilities and intended for long-term residential use. Regardless of whether they are self-contained or not, units within buildings offering institutional care (e.g. hospitals) or temporary accommodation (e.g. motels, hostels and holiday apartments) are not defined as dwelling units. Such units are included in the appropriate category of non-residential building approvals. Dwelling units can be created in one of four ways: through new work to create a residential building; through alteration/addition work to an existing residential building; through either new or alteration/addition work on non-residential building or through conversion of a non-residential building to a residential building.

Educational

## Entertainment and

 recreationalFactories
Flats, units or apartments

Health
Hotels, motels and other short term accommodation

## House

## Miscellaneous

Includes paper mills, oil refinery buildings, brickworks and powerhouses.
Dwellings not having their own private grounds and usually sharing a common entrance, foyer or stairwell.

Includes hospitals, nursing homes, surgeries, clinics and medical centres.
Includes hostels, boarding houses, guest houses, and holiday apartment buildings.

A house is a detached building primarily used for long term residential purposes. It consists of one dwelling unit. For instance, detached 'granny flats' and detached dwelling units (e.g. caretaker's residences) associated with a non-residential building are defined as houses.
Includes justice and defence buildings, welfare and charitable homes, prisons and reformatories, maintenance camps, farming and livestock buildings, veterinary clinics, child-minding centres, police stations and public toilets.

Residential building

Semi-detached, row or terrace houses, townhouses

Shops

Building activity which will result in the creation of a building which previously did not exist.

Building activity which will result in the creation of a residential building other than a house, which previously did not exist.

Building activity which will result in the creation of any residential building (house or other residential) which previously did not exist.

A non-residential building is primarily intended for purposes other than long term residential purposes. Note that, on occasions, one or more dwelling units may be created through non-residential building activity. Prior to the January 1998 issue of this publication, they have been included in the 'Conversions, etc.' column in tables showing dwelling units approved. They are now identified separately (e.g. see table 5). However, the value of these dwelling units cannot be separated out from that of the non-residential building which they are part of, therefore the value associated with these remain in the appropriate Non-residential category.

Includes banks, post offices and council chambers.
Includes warehouses, service stations, transport depots and terminals, electricity substation buildings, telephone exchanges, broadcasting and film studios.

Includes all dwellings other than houses. They can be created by: the creation of new other residential buildings (e.g. flats); alteration/addition work to an existing residential building; either new or alteration/addition work on a non-residential building; conversion of a non-residential building to a residential building creating more than one dwelling unit.

An other residential building is a building other than a house primarily used for long-term residential purposes. An other residential building contains more than one dwelling unit. Other residential buildings are coded to the following categories: semi-detached, row or terrace house or townhouse with one storey; semi-detached, row or terrace house or townhouse with two or more storeys; flat, unit or apartment in a building of one or two storeys; flat, unit or apartment in a building of three storeys; flat, unit or apartment in a building of four or more storeys; flat, unit or apartment attached to a house; other/number of storeys unknown. The latter two categories are included with the semi-detached, row or terrace house or townhouse with one storey category in table 13 of this publication.

Includes convents, churches, temples, mosques, monasteries and noviciates.

A residential building is a building consisting of one or more dwelling units. Residential buildings can be either houses or other residential buildings.

Dwellings having their own private grounds with no other dwellings above or below.

Includes retail shops, restaurants, taverns and shopping arcades.

## AVERAGEFLOOR AREAOF NEW DWELLINGS

## INTRODUCTION

METHOD

RESULTS

This article presents information obtained from the quarterly Building Activity Survey relating to the floor area of new dwellings.

The 'Floor Area' of a building is a measure of the amount of areal space in a building (and its attachments), and is measured in square metres. The boundary of the recorded floor area of a building is delineated by the external perimeter of the external walls of the building. If a building has an unenclosed verandah, carport, etc, attached outside an external wall of one or more storeys, then the area under the verandah is excluded.

The floor area data used in the following analyses was obtained from Building Activity collections and is a measure of the floor area of a building at the final stage of its construction. Average floor area data was not stated for about 10\% of all dwellings and therefore these were excluded from the analyses. Average floor area was calculated using the formula: Total floor area of all completed dwellings in the year/ Number of completed dwellings in the year.

The average floor area of new residential buildings from 1985-86 to 1999-2000 is summarised below.

AVERAGE FLOOR AREA OF NEW RESIDENTIAL BUILDINGS, AUSTRALIA

There has been a steady increase in the average floor area of new dwellings over the last 15 years. The average floor area of new dwellings increased by $28 \%$ between $1985-86$ and 1999-2000, from $155.6 \mathrm{~m}^{2}$ to $199.5 \mathrm{~m}^{2}$. New houses increased from $169.7 \mathrm{~m}^{2}$ to $221.5 \mathrm{~m}^{2}$ (31\%), while new other residential buildings increased from $103.6 \mathrm{~m}^{2}$ to $129.9 \mathrm{~m}^{2}$ (25\%).

| Houses | 169.7 | 199.6 | 221.5 | 31 | 11 |
| Other residential | 103.6 | 123.8 | 129.9 | 25 | 5 |
| Total | 155.6 | 179.3 | 199.5 | 28 | 11 |
| Capital cities |  |  |  |  |  |
| Houses | 175.9 | 205.8 | 229.8 | 31 | 12 |
| Other residential | 108.2 | 124.0 | 128.3 | 19 | 4 |
| Total | 160.1 | 180.9 | 200.3 | 25 | 11 |
| Rest of State |  |  |  |  |  |
| Houses | 162.0 | 192.1 | 209.9 | 30 | 9 |
| Other residential | 96.1 | 123.4 | 134.7 | 40 | 9 |
| Total | 149.7 | 177.2 | 198.1 | 32 | 12 |

The average floor area of new houses in capital cities increased by $31 \%$ in the fifteen years from 1985-86 to 1999-2000, from $175.9 \mathrm{~m}^{2}$ to $229.8 \mathrm{~m}^{2}$. Similarly, the average floor area of new houses outside the capital city regions increased by $30 \%$, from $162.0 \mathrm{~m}^{2}$ to $209.9 \mathrm{~m}^{2}$.
average floor area of new houses, capital cities vs rest of state

The graph shows the average floor area of new houses was higher in capital cities than in regions outside the capital cities. For example, in 1999-2000, average floor area was 9.4\% or $19.8 \mathrm{~m}^{2}$ higher in capital cities. There was no significant difference in other residential buildings.
