### MAIN FEATURES

In November 1982 there were an estimated 6,902,600 persons in the labour force comprising 6,350,600 employed persons and 552,000 unemployed. There were an estimated 4,490,700 persons aged 15 and over not in the labour force. The unemployment rate was 8.0 per cent and the labour force participation rate was 60.6 per cent.

There was a decrease of 49,500 in the number of employed persons between October and November 1982. In the same period the total number of unemployed increased by 15,200. The unemployment rate increased from 7.7 to 8.0 per cent while in seasonally adjusted terms it increased from 8.2 to 8.7 per cent.

In the period November 1981 to November 1982 employment fell by 48,900 (full-time workers fell by 99,300 part-time workers increased by 50,400), unemployment increased by 180,100 and the unemployment rate increased from 5.5 per cent to 8.0 per cent. There was little change in the labour force participation rate.

### PART 1. LABOUR FORCE ESTIMATES

#### EXPLANATORY NOTES

##### Introduction

Part 1 of this publication contains estimates of the civilian labour force derived from the labour force survey part of the monthly population survey. More detailed estimates will be published in *The Labour Force, Australia* (6203.0). Preliminary unemployment estimates have been issued in advance of this publication in *Unemployment, Australia, Preliminary Estimates* (6201.0) and these are revised in this issue.

##### The population survey

2. The population survey is based on a multi-stage area sample of private dwellings (about 30,000 houses, flats, etc.) and non-private dwellings (hotels, motels, etc.), and covers about two-thirds of one per cent of the population of Australia. The information is obtained from the occupants of selected dwellings by carefully chosen and specially trained interviewers. The interviews are generally conducted during the two weeks beginning on the Monday between the 6th and 12th of each month. The information obtained relates to the week before the interview (i.e. the survey week).

##### Scope

3. The labour force survey includes all persons aged 15 and over except: members of the permanent defence forces; certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations; overseas visitors holidaying in Australia; and members of non-Australian defence forces (and their dependants) stationed in Australia.

##### Definitions

4. The labour force category to which a person is assigned depends on his *actual activity* (i.e. whether working, looking for work, etc.) during the survey week. The following definitions, which conform closely to the international standard definitions specified by the International Labour Organisation (ILO), relate only to those persons within the scope of the survey.

5. *Employed persons* comprise all those aged 15 and over who, during the survey week:

- (a) worked for one hour or more for pay, profit, commission or payment in kind in a job or business, or on a farm (including employees, employers and self-employed persons); or
- (b) worked for 15 hours or more without pay in a family business or on a farm (i.e. unpaid family helpers); or
- (c) were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the survey week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the survey week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or
- (d) were employers or self-employed persons who had a job, business or farm, but were not at work.

6. *Unemployed persons* are those aged 15 and over who were not employed during the survey week, and:

- (a) had actively looked for full-time or part-time work at any time in the four weeks up to the end of the survey week and:

(a) had actively looked for full-time or part-time work at any time in the four weeks up to the end of the survey week and:

(i) were available for work in the survey week, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the survey week); or

(ii) were waiting to start a new job within four weeks from the end of the survey week and would have started in the survey week if the job had been available then;

or (b) were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the survey week (including the whole of the survey week) for reasons other than bad weather or plant breakdown.

7. *Unemployed persons looking for first job* are those who had never worked full time for two weeks or more.

8. The *unemployment rate* for any group is the number unemployed expressed as a percentage of the labour force in the same group.

9. *Duration of unemployment* is the period from the time the person began looking for work or was laid off to the end of the survey week. Periods of unemployment are recorded in complete weeks and this results in a slight understatement of duration. *Average (mean) duration* is the duration obtained by dividing the aggregate number of weeks a group has been unemployed by the number of persons in that group. *Median duration* is the duration which divides unemployed persons into two equal groups, one comprising persons whose duration of unemployment is above the median and the other persons whose duration is below it. Medians are calculated from group data, linear interpolation being used within the group which contains the median.

10. *Unemployed persons classified by industry and occupation.* Unemployed persons who had worked full time for two weeks or more in the last two years are classified according to the industry and occupation of their most recent full-time job. Other unemployed persons are not classified by industry and occupation.

11. The *labour force* comprises all persons who, during the survey week, were employed or unemployed, as defined in paragraphs 5 and 6.

12. The *labour force participation rate* for any group is the labour force expressed as a percentage of the civilian population aged 15 and over in the same group.

13. *Full-time workers* are those who usually work 35 hours or more a week and others who, although usually part-time workers, worked 35 hours or more during the survey week. *Part-time workers* are those who usually work less than 35 hours a week and who did so during the survey week. When recording hours of work, fractions of an hour are disregarded.

14. *Hours of work.* The figures of average hours refer to actual hours worked during the survey week, not hours paid for. The figures may be affected by public holidays, leave, absenteeism; temporary absence from work due to sickness, injury, accident and industrial disputes; and stoppages of work due to bad weather, plant breakdown, etc. When hours of work are recorded fractions of an hour are disregarded and this results in slightly lower figures than would be the case if actual time worked was recorded. Persons stood down for the whole of the survey week without pay because of bad weather or plant breakdown at their place of employment are regarded as employed and therefore are included (working no hours) in the calculation of average hours worked. Persons stood down in the survey week for reasons other than bad weather and plant breakdown and waiting to be called back to their jobs are regarded as unemployed and are therefore excluded from the calculations.

15. *Persons not in the labour force* are those who, during the survey week, were not in the categories 'employed' or 'unemployed'.

#### Comparability of series

16. The survey estimates for February 1978 and subsequent months are based on population estimates derived from the 1976 Population Census, adjusted for under-enumeration, and were obtained by using a new sample and revised questionnaire. Estimates from August 1966, revised to the new basis, were published in *The Labour Force, Australia, 1978* (6204.0).

17. When comparing labour force estimates for February 1978 and subsequent months with those for earlier periods it should be noted that with the introduction of monthly surveys the interviews are now conducted during a two-week period, whereas formerly the period was four weeks. The change of timing may affect the level of the figures for any month, but particularly for months during which the employment status of the population may be changing rapidly.

#### Survey sample

18. The population survey sample was reselected after the 1971 and 1976 Censuses of Population and Housing to allow data from the latest Census to be used to improve the efficiency of the population survey sample design. The reselection following the 1981 Census has been completed, and a new sample in all States and Territories was introduced for the October 1982 survey. While estimates from two different samples may differ purely due to chance, the old (i.e. pre-October) and new samples are based on almost identical methods of stratification and selection, and there is only a small probability that the published October estimates differ significantly from the estimates that would have been produced if the old sample had been retained.

19. In reselecting the survey sample, the sampling fractions for States and Territories were not altered except for Western Australia. Because the population of that State was expected to overtake that of South Australia during the intercensal period, it was decided to make the sampling fraction for Western Australia 1 in 100, the same as for South Australia, instead of 1 in 90 as previously. This resulted in a slight increase in the standard errors of estimates for Western Australia.

20. For information on sample design and selection see the Technical note in *The Labour Force, Australia, 1978* (6204.0).

21. Because of the introduction of the new sample of dwellings in October (see paragraph 18), there was not the usually high proportion of dwellings common to each of two consecutive surveys. The standard errors of movements between September and October 1982, and any *quarterly* movements which include this period, are therefore higher than normal. (See Table B page 5 in the October 1982 issue of this publication). Standard errors of *quarterly* movements ending in October 1982 or starting in September 1982 can be obtained by multiplying the figures in Table A (page 5) by 1.4. Standard errors of *quarterly* movements for periods not including September to October can be obtained by multiplying the figures in Table B (page 5) by 1.4. Standard errors of all *annual* movements can be obtained by multiplying the figures in Table A by 1.4.

#### Reliability of the estimates

22. Since the survey estimates are based on information obtained from occupants of a sample of dwellings they, and the movements derived from them, are subject to sampling variability; that is, they may differ by chance from the figures that would have been produced if all dwellings had been included in the survey. One measure of the likely difference is given by the *standard error*. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all dwellings had been included in the survey, and about nineteen chances in twenty that the difference will be less than two standard errors.

23. Standard errors of estimates for the latest month and of estimates of movements since the previous month are shown in Table 1. Standard errors of other estimates and other *monthly* movements should be determined by referring to the text and Tables A and B on page 5. Further information on standard errors is contained in the Technical note in *The Labour Force, Australia* (6203.0).

24. *The smaller the estimate the higher is the relative standard error.* Very small estimates are subject to such high relative standard errors as to detract seriously from their value for most reasonable uses. Estimates below the levels shown in Table A and percentages based on such estimates have not been included. Although figures for these small components can in some cases be derived by subtraction, they should not be regarded as reliable.

25. Examples of the calculation and use of standard errors are given below:

- (a) From Table A it will be seen that the estimate of 313,500 unemployed males looking for full-time work in November 1982 has a standard error of about 6,100. Therefore there are about two chances in three that the number that would have been produced if all dwellings had been included in the survey will be within the range 307,400 to 319,600 and about nineteen chances in twenty that the number will be within the range 301,300 to 325,700.

- (b) The estimate of movement in the number of unemployed males looking for full-time work from October to November 1982 is an increase of 26,900. Table B relates the standard error of the monthly movement to the larger of the two estimates from which the movement is derived. In this case the November 1982 estimate (313,500) is the larger. From Table B it will be seen that the standard error of the monthly movement is about 4,900. Therefore there are about two chances in three that if all dwellings had been included in the surveys the movement would have been within the range +22,000 to +31,800 and about nineteen chances in twenty that it would have been within the range +17,100 to +36,700.

#### Seasonal adjustment

26. This publication contains seasonally adjusted estimates of labour force series for the latest months. Information about the method of seasonal adjustment used and seasonally adjusted figures for all months since February 1978 for the major labour force series which are published in seasonally adjusted form are contained in an appendix to *The Labour Force, Australia, February 1982* (6203.0).

27. The seasonal adjustment factors have been calculated on the basis of four years of monthly data. This is a relatively short series of data on which to base the calculation of seasonal factors, particularly when the pattern of movement is varying from year to year. This effect is particularly marked in the unemployment figures. As happens with all seasonally adjusted series, the seasonal factors will be reviewed annually. Each additional year's figures will cause the factors to be revised; it follows that the seasonally adjusted figures in this publication are certain to be revised. When interpreting trends based on seasonally adjusted series, it should always be borne in mind that seasonally adjusted figures by their nature will be revised when later information is used in calculating the seasonal factors.

| Aged 20 and over                  | 18.4         | 12.2        | 22.1           | 15.5         | 18.6           | 9.6            | 17.4         |

(a) Comprises never married, widowed, and divorced.

## PART 2. GOVERNMENT EMPLOYMENT

## EXPLANATORY NOTES

This part contains details of the numbers of employees of government bodies. More information will be published in *The Labour Force, Australia* (6203.0). Figures for months prior to May 1980 were published in *Civilian Employees, Australia* (6213.0) but, as that publication was suspended following the April 1980 issue (see paragraphs 4 to 6 of the Explanatory notes in that issue), government employment figures will now be included in publications 6202.0 and 6203.0.

2. Government employees comprise not only administrative employees but also all other employees of government bodies (Commonwealth, State, local and semi-government) on services such as railways, road transport, banks, postal and telecommunications, air transport, education (including universities, colleges of advanced education, etc), radio, television, police, public works, factories, marketing authorities, public hospitals (other than those run by charitable or religious organisations) and departmental hospitals and institutions.

3. The numbers of employees shown in Table 11 have been derived from returns obtained from government bodies. Generally, Commonwealth government employees are included in the figures if they are on the payroll on the last working day of the month, whereas for State and local government the reporting date is usually the last day of the last pay period ending in the month.

4. Data shown for defence forces include all permanent defence personnel in Australia and overseas. Other government employees based overseas are excluded, as are employees of foreign governments in Australia.

## Comparability of labour force survey estimates and government employment figures

5. The government employment figures shown in Table 11 are not strictly comparable with the labour force survey estimates included in Part I of this publication and in other ABS publications. Persons in the survey are allocated to an appropriate labour force category according to their activity during the survey week. If they had more than one job in that week only the job in which they usually worked the greater number of hours is considered. The government employment figures are derived from payroll data, and although some returns are adjusted to exclude some part-time employees considered to have full-time jobs elsewhere, some persons will be included even though their government job is not their main one. Other reasons for difference are that the survey estimates are subject to sampling variability, and the reference periods of the two collections are different.

## Inquiries

6. For information about these statistics contact Mr Terry Sharp on Canberra (062) 52 6655.
