No. 35.—Transaction: of the Fremantle Harbour Trust and Bunbury Harbour Board during the undermentioned periods.

NOTE.—The expenditure bases of the two Corporations are not the same. The Fremantle Harbour Trust employs all labour engaged in handling cargo on the wharves, whereas in the case of the Bunbury Harbour Board, general cargo is handled by the Railway Department for and on behalf of the Board, and bulk cargo by the Stevedores, and no revenue (other than wharfage) is derived therefrom or expenditure thereon incurred.

NOTE.—In addition to the above figures the following particulars were also obtained:—Lands farmed on the "Share System": For Cultivation, 33,781 acres. Returns relative to certain alienated and leased lands are not obtained under the Statistics Act which remain *entirely unimproved*, and thus in a lesser degree to the fact that small holdings under one acre in extent are exempted from supplying Returns. The Statistical returns are, however, collected from all lands over one acre in extent on which improvements have been effected, and upon which Agricultural or Pastoral pursuits are carried on, and, therefore, comprise all lands the obtaining of Returns from which would serve any practical purpose.

* The reason why Ringbarbed or partially cleared lands are not included in the returns is that it has proved impracticable to collect returns from these lands. The reason why lands which have been cleared, but are not included in the returns, is that they are not included in the returns collected from all lands over one acre in extent on which improvements have been effected, and upon which Agricultural or Pastoral pursuits are carried on, and, therefore, comprise all lands the obtaining of Returns from which would serve any practical purpose.

VI.—No. 50.—Value of Production, 1935-36.

- (I.) *Gross Value* is the value placed on recorded production at the wholesale price realised at the principal market, which in respect to the greater portion of primary products is the F.O.B. export price. In cases where primary products are absorbed as raw material for secondary industries, the point of disposal to factories is considered the principal market.
- (II.) *Marketing Costs* include freight, cost of containers, commission and other handling charges incidental thereto.
- (III.) *Local Value*.—The deduction of Marketing Costs from the gross price realised gives Local Value.
- (IV.) *The value of goods consumed in the process of production* covers seed and fertilisers used, picking, sprays, dips, fodder consumed, fuel and oil, depreciation and repairs, and similar costs.
- (V.) *Net Value* represents the return to the producer.
- (VI.) To secure a proper appreciation of the value of production as presented below, it is well to keep in mind the following considerations:—The sum of the gross values of the several agents of production contains substantial duplications. The total price realised for a season's wheat, for instance, includes costs of transport, commission and other handling charges, which items form the incomes of those performing these services. Similarly, the Local Value includes the value of fertiliser, etc., used, which item will have been included in the value of manufactured production. Again, fodder grown and valued as an agricultural product would also, if fed to milch cows, be reflected in the value of dairy production. When, however, the *net* values are being ascertained, the value of such fodder consumed is deducted as a cost against dairying, thus eliminating duplication. Thus, while Gross Value represents a very accurate estimate of the value of the production of any particular industry, *only Net Values should be aggregated in arriving at a total value of all recorded production*. The ratio of Marketing Costs to Gross Value of Production varies greatly as between industries. Thus, the great bulk of forestry production sustains no marketing costs, as the logs form the raw material for a secondary industry (saw-milling) without being "marketed." For this reason all forest products were valued prior to the year 1933-34 at place of production before any marketing costs were incurred. Since 1933-34, however, marketing costs and cost of goods consumed in the process of production have been taken into account where actually incurred. In any case, the statement of net values is not affected and is comparable throughout.
- (VII.) *Manufacturing*.—The value of Manufacturing is on a somewhat different basis. Factory output is valued as at the factory door and roughly corresponds to the Gross Value used in respect to primary industry. The contribution of the manufacturer to production, however, is the value added in the process of manufacture. To arrive at this value it is necessary to deduct from the value of total output the value of raw materials used as well as power and light consumed. The resultant value then corresponds with the net values as used in respect of primary production.

STATISTICAL VIEW OF THE PROGRESS OF WESTERN AUSTRALIA, 1829 TO 1935-36.

Note.—Prior to the year 1837 no Blue Books were issued, and figures relative to arrivals and departures, shipping, imports and exports have been taken either from the reports of the Harbour Master at Fremantle or from Perth newspapers of the period. From 1833 to 1859, inclusive, migration figures show only the excess of arrivals over departures or *vice versa*.
