ACKNOWLEDGMENTS.

The co-operation of the Commonwealth Statistician, and the assistance of members of the Public, Government Officers, and others who have contributed information used in the compilation of the Statistical Register is gratefully acknowledged.

I also wish to express my indebtedness to Mr. R. J. Little, Deputy Government Statistician and Mr. C. R. Muirson, Chief Compiler, upon whom the main burden of correlation and supervision of the work of compiling the Register under very difficult war-caused conditions has fallen.

Government Statistician's Office,

No. 5.—Consolidated Revenue—Expenditure and Receipts CLASSIFIED ACCORDING TO FUNCTIONS, 1889-40 and 1940-41.

The general purport of this table is to show the net cost, including the relevant proportion of Public Debt services, of each function, irrespective of the department or departments administering such functions. It should be noted that *Expenditure on Hospitals* is met mainly from the Hospital Trust Fund into which is paid the gross proceeds of the Hospital Tax, which totalled £271,689 in 1889-40 and £284,911 in 1940-41. Expenditure on *Unemployment Relief* includes sustenance and payments of a like nature amounting to £53,580 in 1889-40 and £28,215 in 1940-41. Receipts shown for the item *Roads and Bridges* comprise interest and sinking fund paid by the Main Roads Board on loan capital advanced by the Treasurer in respect to certain Metropolitan roads. *Agricultural Bank* expenditure from Consolidated Revenue is confined to meeting Public Debt charges the salaries of the commissioners and certain group settlement in connection with the Bank's contribution towards interest and sinking fund on loan capital advanced by the Treasurer. Receipts shown for the item *Navigation, Harbours and Lights* represent, largely, contributions by the Fremantle Harbour Trust on account of interest and sinking fund on loan capital together with surplus profits. VI.—VALUE OF PRODUCTION.

NET VALUE—

The Annual Net Value of Production represents the sum available each year for distribution among those concerned in industry, i.e., workers, proprietors (including landlords), and providers of capital.

In combining industries this is the value that is used in order to avoid the inevitable duplication that would result if "Gross" or "Local" values were aggregated.

I. PRIMARY PRODUCTION.

- (a) *Gross Value* is the value placed on recorded production at the wholesale price realised "at the principal market" In cases where primary products are consumed at the place of production or where they become raw material for a secondary industry, these points of consumption are taken as the "principal market."
- (b) *Marketing Costs*, which are deducted from "Gross Value" to obtain "Local Value," comprise Freight, Cost of Containers, Commission, and other handling charges.
- (c) *Local Value* is the value recorded at the place of production, and is obtained by deducting "Marketing Costs" from "Gross Value."
- (d) *The Value of Goods Consumed in the Process of Production* covers seed and fertilizers used, pickling, sprays, dips, fodder consumed, fuel and oil, certain depreciation, repairs, and similar costs, and is deducted from "Local Value" to obtain "Net Value."
- (e) *Net Value* represents the return to the producer (farmer, pastoralist, mine owner, etc.) after deducting from "Local Value" the "Value of goods consumed in the process of production." Such return is the sum available for payment of wages, interest, rent, and producer's own income.

II. MANUFACTURING.

The initial value taken is that of Output "at factory door." The *Net Value of Manufacturing*, comparable with the net value of primary production, is the value added during the course of manufacture or treatment and is computed by deducting from output value the value of "goods consumed in process of production," viz.: materials used; power, fuel and light; repairs, lubricating oil and water; containers, packing, etc. In other words, it represents the sum available to the manufacturer for providing for wages, rent, interest, depreciation, certain unrecorded costs (such as advertising and insurance), and for his own income.

III. GENERAL.

- (a) To secure a proper appreciation of the value of production as set out in the following tables it is well to keep in mind the following considerations:—The sum of the gross values of the several agents of production contains substantial duplications. The total value realised for a season's wheat, for instance, includes costs of transport, commission, and other handling charges, which items form the incomes of those performing these services. Similarly, the Local Value includes value of fertiliser, etc., used, which item will have been included in the value of manufactured production. Again, fodder grown and valued as an agricultural product would also, if fed to milch cows, be duplicated in the value of dairy production. When, however, net values are being ascertained, the value of such fodder consumed is deducted as a cost against dairying, thus eliminating duplication. Thus, while Gross Value represents a very accurate estimate of the value of the production of any particular industry, *only Net Values should be aggregated in arriving at a total value of "All Recorded Production."* The ratio of Marketing Costs to Gross Value of Production varies greatly as between industries. Thus, the great bulk of forestry production sustains no marketing costs, as the logs form raw material for a secondary industry (saw-milling) without being "marketed." For this reason all forest products were valued prior to the year 1933-34 at place of production before any marketing costs were incurred. Commencing with 1933-34, however, marketing costs, together with cost of goods consumed in process of production, have been taken into account where actually incurred. In any case, the statement of net values is not affected and is comparable throughout.
- (b) As a proportion of all production, recorded production varies somewhat from year to year. On the average, total net recorded production represents slightly more than half of the net value of all goods and services produced in Western Australia.

Industrial Establishments

(Exclusive of Mines).

PERTH:

BY AUTHORITY : ROBERT H. MILLER, ACTING GOVERNMENT PRINTER.

1942.

PART VI.—INDUSTRIAL ESTABLISHMENTS (Exclusive of Mines).

DEFINITION.—For the purpose of the Statistics that follow, an Industrial Establishment, or "Factory," is one in which four or more hands are employed, or power other than hand is used.

CONTENTS.

SPECIAL NOTES.—

(1) Unless otherwise stated, figures for "Employment" and "Salaries and Wages" include particulars of "Working Proprietors," and relate to the period of operation, which is not in all cases for the full twelve months.

(2) The Net Value of Manufacturing, shown herein as "Value of Production" or "Net Production," is the value added in the course of manufacture. It is derived from Output by deducting the value of goods consumed (viz., materials used; fuel, power, and light; lubricating oil; repairs to plant; containers, packings, etc.) and represents the sum available for payment of wages, rent, interest, depreciation, certain unrecorded costs (such as advertising and insurance), and for the manufacturer's own income.

No. 11.—Index of Mid-Monthly Employment in Factories.

The annual mean employment in factories for the year 1928-29 (19,799) has been taken as base, = 100, in the index series shown below. Figures have been computed from particulars obtained for the whole collected field of factory employment. It should be noted that there is a break in the continuity of the series between June and July, 1935, owing to the inclusion from the latter month onwards of certain factories previously not included. To this extent the index numbers to June, 1935, are not strictly comparable with those following.

I.—RETAIL PRICES (INCLUDING HOUSING).

This section gives details of Retail Prices, Consumption of Foodstuffs, etc., Housing and House Rents, and Retail Price Index Numbers.

RETAIL PRICES.

Retail Prices of selected groups of commodities and services are collected regularly by the Government Statistician from representative informants in the more important towns of Western Australia.

From 6 towns, prices are obtained for regimens covering (a) 41 items of Food and Groceries, (b) Rents of 4 and 5-roomed Houses, (c) 80 items of Adult and Juvenile Clothing, and (d) 27 items of Household Drapery and Utensils, and in addition, other items of Miscellaneous Expenditure, such as Fuel and Light. Prices of Food and Groceries only are collected from a more extensive list of towns. Informants are required to furnish prices monthly (prices as at the middle of the month) for Food and Groceries and quarterly (particulars as at the 15th of the middle month of each quarter) for House Rents, Clothing, and Miscellaneous items.

Specific grades and qualities have been established for the various items included in the regimen in order to ensure that all informants throughout the State shall quote consistently for articles of the same standard. The collection of data in the Metropolitan Area, Kalgoorlie-Boulder, Northam, Bunbury, and Geraldton—the “five towns” of Western Australia in the several Commonwealth retail price index series—is made under the authority of the Commonwealth Census and Statistics Act, 1905-1938. The State Statistical Department directly supervises the collection of data for the Commonwealth Statistician. The actual collection of returns is carried out by a specially qualified field officer of the Commonwealth Bureau of Census and Statistics, who is attached to the State Department. This officer checks prices and standards in the shops of informants, and inspects houses listed on the rent returns.

In those towns where returns are required under the State Statistics Act, 1907, the method of collection is substantially the same as that outlined above.

Food and Groceries.

The regimen of Food and Groceries commodities adopted for the several index series issued by the Australian Statisticians is set out in Table No. 1. This shows the average prices quoted by retailers in the Metropolitan Area during each month of 1941.

CONSUMPTION OF FOODSTUFFS, ETC.

No. 2.—Consumption of Foodstuffs, Spirituous and Alcoholic Liquors, and Tobacco.

Details of the estimated annual consumption, per head of population, of some of the more important food commodities consumed in Western Australia (including quantities used in manufacturing) are shown in the table hereunder. Particulars are also given of the consumption of Spirituous and Alcoholic Liquors and Tobacco and Tobacco Preparations.

The figures have been derived from records of production and trade for the years 1938-39 to 1940-41, and show the average amounts consumed annually per head of population during that period.

HOUSE RENTS.

No. 3.—Four and Five-roomed Houses—Average Weekly Rentals—Five Principal Towns.

The following table shows the weighted average weekly rentals of four and five-roomed houses in the five principal Western Australian towns. The figures are for ordinary unfurnished dwellings with walls of wood, brick or stone (wood and/or iron, however, in the case of Kalgoorlie-Boulder), in a good state of repair, with ordinary conveniences and occupying fair situations. "Concession" or "Dole" rentals are not recognised as satisfactory data.

RETAIL PRICE INDEX NUMBERS.

In this section are shown Index numbers computed from retail prices returns furnished by informants in the more important towns of the State.

These Index numbers cover selected "regimens" (or lists of commodities or services) comprising items of—

- I.—Food and Groceries,
- II.—Housing (Rents of 4 and 5-roomed Houses),
- III.—Clothing, and
- IV.—Miscellaneous Household Expenditure,

as well as combined regimens of Food, Groceries, and Housing (Groups I. and II.), and "All Items of Household Expenditure" (Groups I. to IV. inclusive)—the "B" and "C" ("All Items") Index Series respectively, of the Commonwealth Statistician.

RETAIL PRICE INDEX NUMBERS—*continued.*

The several Index series simply measure variations in the aggregate cost of a given regimen of commodities at various intervals of time or as between different towns, and are intended for use as approximate measures of general retail price movements in the commodity classes to which they refer. In this connection it cannot be too strongly emphasised that they do not, and are not, intended to measure an absolute "cost of living," *vide* Commonwealth Statistician's Labour Report No. 21, Appendix "Wages and Prices," page 167.

In the series set out in the following pages the Index numbers themselves represent the several "aggregates" expressed as relatives of the weighted average "aggregate cost" of the same regimen in the six capital cities over some specific interval of time, *e.g.*, the five years 1923 to 1927.

To ensure that the series shall be as reliable as possible, the commodities comprising the complete regimen have been selected to conform to the following conditions:—

1. They must be such that they can be clearly and definitely described.
2. They must be capable of standardisation, and mean the same thing at different times and places.
3. They must not be subject to violent or extreme seasonal fluctuations (hence, in general, fresh fruit and vegetables are excluded from the regimen).
4. They must be in common use, and their usage must comprise an appreciable proportion of the total consumption of the commodity group to which they relate, and moreover, remain relatively constant.
5. On the whole, they must be a fair sample of the commodity group which they purport to represent.

FOOD AND GROCERIES.

The following table sets out Index numbers representing variations in the prices of Food and Groceries in each of the five Western Australian towns covered by the Commonwealth Statistician's enquiries. The table also gives weighted averages for the "five towns," and the six capital cities of the Commonwealth. Weighting is on a population basis.

No. 8.—Housing (Rents of Four and Five-roomed Houses)—Five Principal Towns.

Variations in the Rents of four and five-roomed Houses in the five principal Western Australian towns are shown in the following table. The Index numbers are based on returns received from house agents for ordinary unfurnished dwellings, in a good state of repair and with ordinary conveniences, occupying fair situations. "Concession" or "Dole" rentals are definitely not recognised as satisfactory data.

No. 11.—Clothing—Five Principal Towns.

Variations in the prices of the clothing regimen are given in the table hereunder. The regimen is based on the requirements of a nominal family unit of five persons, comprising a man, woman, boy (aged 10½ years), girl (aged 7 years), and boy (aged 3½ years). These persons are taken as representative respectively of men over seventeen years, women over seventeen years, children ten to sixteen years, children five to nine years, and children under five years.

Within each section, the items are weighted according to their relative consumption by the type of person concerned, and the sectional aggregates themselves are brought together in one composite aggregate after they have been weighted in accordance with an appropriate population factor. This factor represents the proportion which each age group bears to the total population.

RETAIL PRICE INDEX NUMBERS—continued.

No. 13.—“All Items” of Household Expenditure (“C” Series)—Five Principal Towns.

This table combines together in one series, the index numbers of Food and Groceries, Housing, Clothing and Miscellaneous Expenditure appearing in the preceding pages. This is the Commonwealth Statistician's “All Items” or “C” Series Index of Retail Prices. The “C” Series index numbers were adopted by the Commonwealth Court of Arbitration as the basis for the adjustment of the wages declared in its judgment of the 17th April, 1934. Since its 1937 Basic Wage judgment, the Commonwealth tribunal has been using a special “Court Series” based on the “C” Series (see table No. 15, page 16).

RETAIL PRICE INDEX NUMBERS—continued.

No. 15.—The Commonwealth "Court" Series ("All Items").

This is the Index series issued by the Commonwealth Court of Conciliation and Arbitration, and used by it to vary the "needs" part of the Commonwealth Basic Wage. The series was first adopted by the Court in connection with its 1937 judgment, which provided that the "needs" portion of the basic wage should be the appropriate Index number stated as shillings (to the nearest whole number). The Index series is obtained by multiplying the Commonwealth Statistician's "C" Series Index numbers by 0.081.

Five Principal Towns and Six Capital Cities—Each Series.

Tables Nos. 16 to 20 compare movements among the several Index series in each of the Commonwealth Statistician's "five Western Australian towns," while Tables Nos. 21 and 22 give similar details in respect of the weighted average of these towns and the six capital cities.

Note.—Each series has been given its own base. This is the weighted average cost of the particular regimen concerned, for the six capital cities, during the period 1923-27. The Index numbers cannot, of course, be compared with each other horizontally in order to show the relative costs of the different regimens, since the base of each series has been made equal to 1000.

II.—WAGES.

No. 23.—State Basic Wage.

Under the provisions of the Industrial Arbitration Act, 1912-25, authority was vested in the State Court of Arbitration to declare an annual Basic Wage operative as from the 1st of July each year.

The first decision of the Court took effect on the 1st July, 1926, and prescribed a rate of £4 5s. 0d. for males and £2 5s. 11d. for females throughout the whole of the State.

These rates remained unaltered until the 1st July, 1929, when the amounts were increased to £4 7s. 0d. and £2 7s. 0d. respectively, with the exception of certain specified goldfields areas, in respect of which the previous wage was retained.

A revision by the Court following the 1930 inquiry resulted in the declaration of a separate wage of £4 6s. 0d. for males and £2 6s. 5d. for females, in respect of the Metropolitan Area, and rates of £4 5s. 0d. and £2 5s. 11d. respectively for all other parts of the State.

Additional power was given the Court under the provisions of the Industrial Arbitration Act Amendment Act, 1930, to enable quarterly adjustments to be made to the annual declaration, and on the 3rd March, 1931, rates of £3 18s. 0d. for males and £2 2s. 2d. for females were prescribed for the Metropolitan Area, while all other parts of the State were fixed at £3 17s. 0d. and £2 1s. 8d. respectively.

The annual declaration operative as from the 1st July, 1931, did not vary these amounts, but a further quarterly adjustment on the 18th August, 1931, marked the inauguration of a different wage for agricultural areas, which are taken to be those areas comprised within the official South-West Land Division as gazetted under the Land Act.

Wage levels in all divisions of the State were considerably increased as from the 1st July, 1938, following the most comprehensive inquiry since the original declaration. In the course of the 1938 inquiry, special consideration was given to the factors of National Income and Standard of Nutrition.

At a sitting of the Court held on 26th February, 1942, to consider the quarterly adjustment of the basic wage, the Court decided that, in the light of existing economic conditions, there should be no alteration to the rates then in force. This decision marked the first occasion upon which the Court, in the exercise of the discretionary powers conferred upon it under the Act, had refrained from making a quarterly adjustment to the wage to equate its purchasing power to the "standards" of the relevant annual declaration. It was followed by a similar decision given on 29th April, 1942, when the Court reaffirmed that no adjustment would be made to existing rates, despite further increases in retail prices.

On 11th June, 1942, the Court in its annual declaration adopted the rates which had operated since 28th July, 1941, as its new base, and these remained in force until 8th August, 1942, when they were superseded by a Basic Wage Adjustment Order made by the Premier on 7th August under the authority of National Security (Economic Organisation) Regulations. The rates established under this Order were substantially the current equivalents of the standards adopted by the Court in its annual declarations, 1938-1941. These standards were re-adopted by the Court for the purposes of the quarterly adjustment of the basic wage made on 30th October, 1942.

The table hereunder shows annual declarations and certain interim variations since the original decision of 1926, which remained unaltered until 1st July, 1929.

No. 24.—Commonwealth Basic Wage.

While the Commonwealth Conciliation and Arbitration Act, 1904-30, empowers the Court constituted under that authority to prescribe "a minimum rate of wage" it neither defines nor provides for the determination of a specific "basic wage." The latter, however, is identifiable with the minimum wage payable to an adult unskilled labourer.

The history of the Commonwealth basic wage may be conveniently divided into two periods:

(1) Until 1934, rates were based on the "Harvester" judgment delivered by Mr. Justice Higgins in 1907, which fixed 42/- per week for Melbourne as a reasonable amount to meet the needs of "a family of about five."

From 1913 up to the end of 1921 the basic wage was simply a "Harvester" equivalent, rates being fixed by varying the original Harvester wage in accordance with movements in the purchasing power of money as disclosed by the Commonwealth Statistician's "A" Series Index Numbers covering items of food and groceries and rents of "all houses." Up to 1918 the Court in computing "Harvester" equivalents used the index numbers for the previous calendar year, from 1918 to the end of 1921, the figures for the next preceding four quarters were used, and from 1921 onwards the index numbers for the latest quarter available. In that same year the Court began to insert provisions in awards for the automatic adjustment of wages to quarterly movements in the "A" Series index, and a loading—subsequently known as the "Powers 3/-"—was added to the "Harvester equivalent" by Mr. Justice Powers to ensure that over a period of rapidly rising prices the worker would suffer no loss of real wages in the interval between the adjustment of rates.

The method of fixation and adjustment remained unaltered until after the onset of the depression. Then in 1931, the Court having satisfied itself that economic conditions were such as to preclude the maintenance of the prevailing level of real wages, directed that, with certain exceptions, all wages under its jurisdiction should be reduced by 10 per cent. as from 1st February of that year.

In its judgment of May, 1933, the Court concluded that the method of adjusting wages to conform to variations in the "A" Series index numbers had resulted in a decrease of real wages beyond the prescribed percentage. To correct this movement it adopted the use of the "D" Series index.

(2) In judgment delivered in April, 1934, the Court introduced an entirely new basis for the fixation of the basic wage. The "Harvester" standard supplemented by the Powers loading was discarded and a "fresh starting point" selected, which provided that an index number of 1000 in the Commonwealth Statistician's "All Items" (C) Series was to be equivalent to a wage of 81/- per week. This new standard was based on that established by the New South Wales Board of Trade in 1925. Owing to adverse industrial conditions in South Australia and Tasmania the new rates for Hobart and Adelaide were graduated so as not to come into full

operation until 1st June, 1935. The date on which future periodical adjustments were to become operative was altered to the first pay period in the months of June, September, December and March. Adjustments were continued on this basis until 1940, since when they have taken effect from the beginning of the second month after the end of each quarter.

The hearing of a claim by the combined unions for an increase in the basic wage was concluded in June, 1937, when the Court in fixing a new rate transferred the basis of the adjustment of wages from the "C" Series to a special "Court" Series (see page 16), and at the same time provided for the addition of various differential prosperity loadings to the rate payable under the shillings table as determined by the 1934 judgment. By this method (which is still retained following upon a further judgment delivered by the Court on 7th February, 1941), the first or "needs" part of the basic wage is varied in accordance with movements in the "Court" prices index, but the loadings (which came into operation by instalments) are fixed amounts. For the six capital cities the prosperity loadings are as follows: Sydney 6/-, Melbourne 6/-, Brisbane 6/-, Perth 4/-, Adelaide 4/-, Hobart 4/-, Six Capitals 5/-.

Commonwealth Basic Wage rates payable in each of the Six Capital Cities since 1933 are set out hereunder:—

EMPLOYMENT—continued.
No. 26.—Employment according to Pay Roll Tax Returns.
 (Information supplied by courtesy of Commonwealth Statistician.)

This table shows the number of persons on the last pay roll of the month of those employers who are subject to Pay Roll tax. It does not cover the whole field of employment since it excludes (a) Establishments where the pay roll is not more than £20 per week, (b) Commonwealth Departments, (c) certain other classes of establishments such as Religious or Public Benefit institutions, and Public Hospitals. Where the employer is engaged in more than one industry, the employees are classified under the industry in which such employer is predominantly engaged.

Employees of State, Semi-Government, and Local Government authorities are included under the appropriate industry heading *only* when separate returns are supplied, *e.g.*, certain State Government Trading Concerns and Public Utilities. The figures shown in this table may be taken as indicative of trend of employment, but not as a guide to absolute numbers employed in the respective industries.

No. 27.—Index of Employment in Factories.

The annual mean employment in factories for the year 1923-29 (19,799) has been taken as base, = 100, in the index series shown below. Figures have been computed from particulars obtained in respect of the whole field of factory employment. It should be noted that there is a break in the continuity of the series between June and July, 1935, owing to the inclusion from the latter month onwards of certain factories previously not included. To this extent the index numbers to June, 1935, are not strictly comparable with those following.

No. 29.—Juvenile Employment in Industrial Establishments (exclusive of Mines).

Particulars are given below of the number of juvenile factory employees in the various industries. The figures are exclusive of employees engaged in those establishments where less than four persons are employed, and hand power only is used. It should be noted that the figures relate to numbers employed as at 15th June.

1943.

STATISTICAL VIEW OF THE PROGRESS OF WESTERN AUSTRALIA, 1829 TO 1940-41.

Note.—Prior to the year 1837 no Blue Books were issued, and figures relative to arrivals and departures, shipping, imports and exports have been taken either from the reports of the Harbour Master at Fremantle or from Perth newspapers of the period. From 1838 to 1859, inclusive, migration figures show only the excess of arrivals over departures or *vice versa*.
