

SECTION VIII.

AGRICULTURAL PRODUCTION.

NOTE.—Except where otherwise stated, the “agricultural” years hereinafter mentioned are taken as ending on the 30th June.

§ 1. Introductory.

1. **Early Attempts at Agriculture.**—The instructions issued to Captain Phillip on the 25th April, 1787, directed him, amongst other things, to proceed as soon as possible to the cultivation of the soil “under such regulations as may appear to be necessary and best calculated for securing supplies of grain and provisions.” When the settlers landed at Botany Bay, however, it was found that the glowing accounts published in England by members of Captain Cook’s expedition of the fertility of the soil in that locality were considerably overdrawn. Even when Phillip and his company moved round to Port Jackson on the 26th January, 1788, matters were for a time in no better case. The ground in the immediate neighbourhood of the settlement was not suitable for the cultivation of cereal crops, and when the time came to cultivate the soil it was found that there were very few who possessed the slightest acquaintance with the art of husbandry.

2. **The First Sowing.**—In his despatch of the 15th May, 1788, Captain Phillip states that it was proposed to sow eight acres with wheat and barley, although, owing to the depredations of field mice and ants, he was doubtful of the success of the crops.

3. **Discovery of Suitable Agricultural Land.**—A branch settlement was formed at Rosehill, on the Parramatta River, towards the close of 1788, and here grain crops were successfully raised. In his despatch of 12th February, 1790, Phillip refers to the harvest at Rosehill at the end of December, 1789, as consisting of 200 bushels of wheat and 60 of barley, in addition to small quantities of oats, Indian corn, and flax. By the year 1791 there were 213 acres under crop in this locality. In 1792 a new settlement was formed at Toongabbie, about three miles westward of Parramatta, where Phillip states “there are several thousand acres of exceeding good ground.” The Hawkesbury Valley, which probably contains some of the richest land in the world, was first settled in 1794. For a long time agricultural operations in Australia were restricted to the narrow belt of country between the tableland and the east coast of New South Wales, as it was not until the year 1813 that a passage was discovered across the Blue Mountains to the fertile plains of the west.

§ 2. Progress of Agriculture.

1. **Early Records.**—In an “Account of Live Stock and Ground under Crop in New South Wales, 19th August, 1797,” Governor Hunter gives the acreage under crop as follows:—Wheat, 3,361 acres; maize, 1,527 acres; barley, 26 acres; potatoes, 11 acres; and vines, 8 acres.

At a muster taken in 1808 the following was the return of crops:—Wheat, 6,877 acres; maize, 3,389 acres; barley, 544 acres; oats, 92 acres; peas and beans, 100 acres; potatoes, 301 acres; turnips, 13 acres; orchards, 546 acres; and flax and hemp, 34 acres.

By the year 1850 the area under crop had increased to 491,000 acres, of which 198,000 acres were cultivated in what is now the State of New South Wales, and 169,000 acres in Tasmania. At the end of 1850 the area under cultivation in Victoria, which was then the Port Phillip District of New South Wales, was 52,190 acres.

The gold discoveries of 1851 and subsequent years had at first a very disturbing effect on agricultural progress, the area under crop declining from 491,000 acres in 1850 to 458,000 acres in 1854; the area under cultivation in New South Wales decreased by nearly 66,000 acres, while in Tasmania a falling-off of over 41,000 acres was experienced. The demand for agricultural products occasioned by the large influx of population was, however, soon reflected in the increased area cultivated, for at the end of 1858 the land under crop in Australia totalled over a million acres. The largest increase took place in Victoria, which returned an area of 299,000 acres. For the same year South Australia had 264,000 acres in cultivation, Tasmania 229,000 acres, and New South Wales 223,000 acres.

2. *Progress of Cultivation since 1860.*—The following table shews the area under crop in each of the Commonwealth States and Territories at decennial intervals since 1860 and during each of the last five seasons. The area under permanent artificially-sown grasses is excluded in all the States, except for the years 1860–79 in the case of New South Wales, where the acreage cannot be separated. During those years, however, the area laid down under permanent grasses could not have been very large.

AREA UNDER CROP IN AUSTRALIA, 1860 TO 1919–20.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Nor. Ter.	Fed. Ter.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1860–1	280,798	387,282	3,353	350,284	24,705	152,860	1,188,282
1870–1	426,976	692,840	52,210	801,571	54,527	157,410	2,185,534
1880–1	629,180	1,548,809	113,978	2,087,237	57,707	140,788	4,577,699
1890–1	852,704	2,031,955	224,993	2,093,515	69,678	157,376	5,430,221
1900–1	2,445,564	3,114,132	457,397	2,369,680	201,338	224,352	8,812,463
1910–11	3,386,017	3,052,070	667,113	2,746,384	855,024	286,920	360	..	11,893,838
1915–16	5,796,376	5,711,265	729,588	3,763,570	2,189,456	333,334	274	4,371	18,528,234
1916–17	5,164,434	4,851,335	885,259	3,627,477	2,004,944	270,526	274	2,131	16,806,380
1917–18	4,461,172	4,110,225	727,958	3,079,778	1,679,772	238,199	134	1,744	14,298,982
1918–19	3,891,823	3,942,899	625,617	3,111,079	1,605,088	254,109	99	1,779	13,332,393
1919–20	3,773,577	4,000,815	563,762	3,058,770	1,628,163	270,955	365	2,109	13,298,516

The increase in the area under crop during the past ten years has been most marked in the case of Western Australia, New South Wales, and South Australia, the respective increases being 906,077, 593,016, 528,469 acres. During the same period an increase of 342,280 acres was experienced in Victoria, while Queensland and Tasmania suffered decreases of 43,028 and 3,071 acres respectively. The total area under crop in the Commonwealth increased during the period by 2,326,217 acres. The percentage of increase was particularly high in Western Australia, viz., 125 per cent. South Australia had an increase of 21 per cent., while New South Wales and Victoria added to their areas under crop to the extent of 19 and 9 per cent. respectively. The decreases for the ten years represented about 7 per cent. in Queensland and 1 per cent. in Tasmania, while the increase for the whole of the Commonwealth during the same period was 21 per cent.

3. *Relation to Population.*—From the following table it will be seen that the acreage under crop per 1,000 of the population has consistently declined in all the States during the past four years. The decreased areas are particularly noticeable in New South Wales.

Victoria, South Australia, and Western Australia, and are mainly attributable to the decline of wheat growing in Australia since 1915-16. Details for the past five seasons are as follows :—

TOTAL AREA UNDER CROP PER 1,000 OF POPULATION, 1915-16 TO 1919-20.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Ter.	Fed. Ter.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1915-16 ..	3,099	4,025	1,075	8,584	6,885	1,658	60	2,390	3,757
1916-17 ..	2,779	3,468	1,322	8,383	6,493	1,353	57	959	3,447
1917-18 ..	2,373	2,913	1,074	7,060	5,429	1,172	27	829	2,897
1918-19 ..	2,016	2,756	757	6,980	5,121	1,217	21	797	2,650
1919-20 ..	1,884	2,674	777	6,533	4,909	1,250	78	1,099	2,534

4. Relation to Total Area.—The next table furnishes a comparison of the area under crop in the several States and Territories and the Commonwealth with the respective total areas. For the Commonwealth as a whole, the area under crop in 1919-20 represented only about one acre in every 143. In Victoria the proportion was about one acre in every 14, in New South Wales one in 52, in Tasmania one in 62, in South Australia one in 80, in Western Australia one in 384, in Queensland one in 761, in the Federal Territory one in 285, and in the Northern Territory about one in 918,128.

PERCENTAGE OF AREA UNDER CROP ON TOTAL AREA, 1915-16 TO 1919-20.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Ter.	Fed. Ter.	C'wealth.
	%	%	%	%	%	%	%	%	%
1915-16 ..	2.927	10.154	0.170	1.547	0.351	1.987	0.0001	0.749	0.973
1916-17 ..	2.608	8.625	0.206	1.491	0.321	1.612	0.0001	0.354	0.883
1917-18 ..	2.253	7.308	0.170	1.266	0.269	1.420	..	0.290	0.751
1918-19 ..	1.965	7.010	0.122	1.279	0.257	1.515	..	0.296	0.700
1919-20 ..	1.905	7.113	0.131	1.257	0.261	1.615	..	0.351	0.699

5. Artificially-sown Grasses.—In all the States considerable areas are devoted to artificially-sown grasses, mainly sown on uncultivated land after burning off the existing vegetation and consequently not included with "area under crops." Statistics regarding the area under such grasses are as shewn hereunder :—

AREA UNDER SOWN GRASSES, 1915-16 TO 1919-20.

Season.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Nor. Ter.	Fed. Ter.	Commonwealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1915-16	1,247,029	1,182,995	305,186	25,443	9,119	675,335	200	70	3,445,377
1916-17	1,357,087	1,292,817	363,876	29,644	8,327	654,072	200	70	3,706,093
1917-18	1,389,557	1,268,310	406,094	20,155	11,769	679,512	460	83	3,775,940
1918-19	1,438,382	1,269,493	418,467	21,987	14,158	686,954	600	83	3,830,124
1919-20	1,543,317	1,062,244	449,019	18,107	16,672	667,390	500	871	3,758,120

The considerable increase in the area of the grass lands of the Commonwealth is due in large measure to the great development of the dairying industry which has taken place during recent years, and which is referred to in the succeeding section.

§ 3. Relative Importance of Crops.

1. **Distribution of Crops.**—In the following table are furnished details concerning the areas in the several States under each of the principal crops for the season 1919–20 :—

DISTRIBUTION OF CROPS IN AUSTRALIA, 1919–20.

Crop.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Ter.	Fed. Ter.	Total for C'wealth.

Total area ..	3,773,577	4,000,815	563,762	3,058,770	1,628,163	270,955	365	2,109	13,298,516

2. **Relative Areas of Crops in States and Territories.**—Taking the principal crops, i.e., those in the case of which the cultivation amounts to more than 50,000 acres in the Commonwealth, the proportion of each in the various States and Territories to the total area under crop for the season 1919–20 is shewn in the next table. In four of the States, viz., New South Wales, Victoria, South Australia, and Western Australia, wheat-growing for grain is by far the most extensive form of cultivation, while in the same States, with the exception of New South Wales where green forage displaced hay for the first time, the hay crop is second in importance. In Victoria, South Australia, and Western Australia the oat crop occupies third position, while hay ranks third in New South Wales followed by maize. In Queensland, on the other hand, the three principal crops in the order of importance are green forage, sugar-cane, and maize, while in Tasmania hay, oats, and orchards and fruit gardens, occupy the leading positions. For the Commonwealth as a whole, the wheat, hay, and oat crops represent nearly 80 per cent. of the total area under crop.

PROPORTION OF AREA UNDER CHIEF CROPS, 1919-20.

Crop.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Ter.	Fed. Ter.	C'wealth.

3. Relative Positions of States and Territories in regard to Principal Crops.—The relative proportion of acreage of the several crops for 1919-20 and the position regarding them in each State and Territory is shown in the following table. New South Wales exhibited the largest area under green forage and maize, and was second in hay, orchards, and sugar-cane; Victoria was in the leading position in regard to hay, oats, orchards and fruit gardens, and potatoes; and Queensland was first in sugar-cane and second in green forage and maize. South Australia had the largest area under wheat, vineyards, and barley, and occupied second position in regard to oats; Western Australia held third position in oats and barley, and fourth in wheat, hay, and vineyards; while Tasmania was second in regard to potatoes, and third in orchards and fruit gardens.

All other Crops ..	121,185	125,918	132,112	136,049	131,193
Total	18,528,234	16,806,380	14,298,982	13,332,393	13,298,516

During the period under review the area devoted to the several crops has varied considerably, that under wheat attaining a maximum in the season 1915-16, and a minimum in 1919-20, the decline during the four years amounting to 6,065,213 acres, while hay also reached its maximum area in 1915-16, and its minimum in 1917-18. Of the other crops, green forage, oats, orchards and fruit gardens, and vineyards attained their maximum areas in 1919-20, maize and potatoes, in 1916-17, sugar-cane in 1917-18, and barley in 1918-19.

§ 4. Wheat.

1. **Progress of Wheat-Growing.**—(i) *Acreage.* The area under wheat for grain is given below for each State at various periods since 1860, and is shewn diagrammatically in the graph hereinafter :—

AREA UNDER WHEAT, 1860-1 TO 1920-1.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Ter.	Fed. Ter.	C'wealth.

(a) Preliminary figures except Victorian which are final.

The area devoted in the Commonwealth to the production of wheat for grain was higher for the season 1915-16 than for any previous season, there being an increase in all the States with the exception of Queensland, which shewed a falling-off. The figures for the season 1916-17 shew a reduction in area under wheat for grain throughout the Commonwealth with the exception of Queensland and South Australia, where the acreages for both States are the highest on record. During the next three years a serious decline took place in the area under wheat in all the States, the Commonwealth total for the latter year exhibiting a shortage of over 6 million acres as compared with 1915-16. The average area under wheat in the Commonwealth during the last ten seasons, 1910 to 1920, was 8,927,988 acres, or roughly $2\frac{1}{2}$ million acres more than were sown during 1919-20.

Although final figures for 1920-21 for all the States are not yet available, the data to hand indicate the total area under wheat for grain in the Commonwealth at about 9,054,584 acres, representing a notable increase of 41 per cent. on the 1919-20 area. This increase was in evidence in all the wheat producing States, being most marked in New South Wales, where the area under wheat for grain increased by 1,650,196 acres. The total for the Commonwealth during 1920-21 exceeded the ten-yearly average by 126,596 acres.

(ii) *Yield.* The production during the same period for each State and for the Commonwealth as a whole is given below :—

PRODUCTION OF WHEAT, 1860-1 TO 1920-21.

(a) Final figures Victoria, those for remaining States approximate.

The 1915-16 harvest of 179,065,703 bushels was the largest ever reaped in the Commonwealth. The 1916-17 yield of 152,420,189 bushels comes next in order, followed by the yields obtained during 1917-18, 1913-14, 1910-11, 1912-13, and 1909-10, i.e., 114,733,584; 103,344,132; 95,111,983; 91,981,070, and 90,413,597 bushels respectively. These seven seasons represent the only occasions on which a harvest exceeding 90,000,000 bushels was garnered. During the past four seasons the production of wheat in the Commonwealth has declined from 179,065,703 bushels in 1915-16 to 45,975,805 bushels in 1919-20, a decrease of 133,089,898 bushels, or 33,272,475 bushels per annum. In order to arrest this serious decline an earnest endeavour was made throughout the wheat growing States to increase the acreage during 1920-21.

Satisfactory Government guarantees and the prospects of high prices ruling in England when the crop would be garnered proved sufficient inducement to growers to sow 9,054,584 acres, an increase of 2,635,285 acres on the 1919-20 area. The season was an exceptionally good one, the average yield per acre equalling nearly 16 bushels, and the total production amounted to 144,243,734 bushels, which figure has only been exceeded on two occasions, viz., in 1915-16 and 1916-17.

(iii) *Average Yields.* In the next table will be found the average yield of wheat per acre in each of the last five seasons, and for the decennium 1910-20:—

YIELD OF WHEAT PER ACRE, 1915-16 TO 1919-20.

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.Ter.	F. Ter.	C'wealth.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bshls.	Bushels.	Bushels.
1915-16..	15.94	15.90	4.42	12.46	10.52	20.43	..	16.21	14.34
1916-17..	9.61	16.37	10.81	16.46	10.28	12.53	..	14.06	13.22
1917-18..	11.33	14.03	8.10	12.18	7.44	11.57	..	14.32	11.74
1918-19..	7.60	11.40	4.83	10.49	7.72	15.66	..	10.00	9.47
1919-20..	2.98	7.75	6.71	7.77	10.77	18.58	..	5.85	7.16
Average 10 seasons 1910-20	(a)10.75	11.92	10.43	10.08	8.85	18.44	2.50	(b)14.14	10.69

(a) Including Federal Territory.

(b) Average for nine seasons.

As the above figures shew, there were considerable variations in the average yields, chiefly due to the vagaries of the seasons. Since 1915-16, the record wheat producing year, the average yield per acre has continuously declined, culminating in the low yield of 7.16 bushels for the drought year of 1919-20.

(iv) *Relation to Population.* During the seasons embraced in the following table, the Commonwealth's production of wheat per head of population has varied between $8\frac{1}{2}$ bushels in 1919-20 and $36\frac{1}{2}$ bushels in 1915-16. The State in which wheat-growing generally occupies the most important position relatively to population is South Australia, which in 1919-20 had a yield averaging nearly 32 bushels per head. Queensland and Tasmania are the States in which the average production of wheat per head is least, the quantity raised being considerably below that required for local consumption. Particulars for the past five seasons are as follows:—

AUSTRALIAN WHEAT PRODUCTION PER 1,000 OF POPULATION, 1915-16 TO 1919-20.

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N. Ter.	F. Ter.	C'wealth.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
1915-16..	35,675	41,241	611	77,854	57,344	4,944	..	21,023	36,307
1916-17..	19,685	36,574	3,679	105,718	52,147	1,742	..	5,677	31,264
1917-18..	19,943	26,745	1,527	65,776	30,068	1,242	..	3,505	23,247
1918-19..	9,493	17,641	150	51,462	28,220	893	..	161	15,036
1919-20..	2,191	9,932	430	31,996	33,839	985	..	424	8,762

The normal annual consumption of wheat in Australia, exclusive of the requirements for seed, poultry and other live stock, is 327 lbs. (5.448 bushels) per head of population.

2. *Australian and Foreign Wheat Yields.*—In the next table will be found a statement of the average return per acre in the principal wheat-growing countries of the world, ranging from Denmark with a maximum of 47.5 bushels per acre to Mexico with a minimum of 3 bushels per acre. Australia with approximately 7.2 occupies a relatively subordinate position.

AVERAGE YIELD OF WHEAT PER ACRE IN VARIOUS COUNTRIES, 1919.

Country.	Average Yield in bushels per acre.	Country.	Average Yield in bushels per acre.
Denmark	47.5	France	15.7
Netherlands	37.2	Argentine Republic	14.3
New Zealand	32.7	Austria (1916)	13.8
Belgium	30.1	India	12.6
United Kingdom	29.2	United States	12.5
Sweden	27.3	Spain	12.5
Switzerland	27.1	Russia in Europe (1916)	10.4
Egypt (1918)	25.3	Canada	10.1
Germany	24.9	Union of South Africa (1918)	9.0
Japan	21.7	Uruguay	8.0
Hungary (1915)	17.9	Portugal (1918)	7.6
Bulgaria	16.4	Algeria	7.5
Rumania	16.4	Australia (a)	7.2

Serbia (1914)	16.0	Tunis	6.2
Chile	15.9	Mexico (1914)	3.0

(a) Average yield per acre for 10 years, 10.69.

3. Wheat Crops of the World.—The latest available official statistics of the production of wheat in various countries are given in the following table :—

WHEAT YIELD IN VARIOUS COUNTRIES, 1919.

Country.	Yield in bushels.	Country.	Yield in bushels.
United States	912,384,000	Austria (1916)	27,811,000
Russia in Europe (1917)	377,900,000	Algeria	20,961,000
India	376,880,000	Chile	20,930,000
Russia in Asia (1917)	230,406,000	Turkey in Europe (1915)	17,449,200
Argentine Republic	214,400,000	Persia (1915)	15,510,400
Canada	193,260,000	Mexico (1918)	10,470,000
France	177,929,000	Belgium	9,892,000
Italy	169,517,000	Sweden	9,507,000
Spain	129,215,000	Tunis	7,347,000
Hungary (1917)	111,995,000	Union of South Africa	6,628,000
Germany	79,824,000	Portugal (1918)	6,051,000
United Kingdom	69,320,000	Netherlands	6,013,000
Rumania	48,287,000	Denmark	5,914,000
Australia (a)	45,976,000	Uruguay	5,732,000
Bulgaria	34,019,000	New Zealand	4,560,000
Turkey in Asia (1915)	33,929,000	Serbia (1918)	4,000,000
Egypt (1918)	32,555,000	Switzerland	3,523,000
Japan	29,809,000		

(a) Average yield for 10 years, 95,479,948.

Various estimates of the total quantity of wheat produced in the world have been made. That furnished by the International Institute of Agriculture, Rome, gives the following figures for the ten years 1909 to 1918 :—

WORLD'S PRODUCTION OF WHEAT, 1909 TO 1918.

Year.	1,000,000 bushels.	Year.	1,000,000 bushels.	Year.	1,000,000 bushels.
1909	3,575	1913.. ..	4,035	1917.. ..	3,243
1910	3,532	1914.. ..	3,579	1918.. ..	3,675
1911	3,525	1915.. ..	4,270	Average for 10 years	3,655
1912	3,810	1916.. ..	3,301		

In this estimate the figures given for Australia and New Zealand relate to the agricultural year ending on 30th June in the year specified.

For the ten years referred to, the Australian production of wheat aggregated 999,237,270 bushels, thus representing 2.7 per cent. of the world's production. The total quantity of wheat produced in the British Empire during the same period of ten years was approximately 7,608 million bushels, so that the Australian production of wheat represented 13.1 per cent. of that of the British Empire, while the British Empire production represented 20.82 per cent. of the world's total.

4. **Prices of Wheat.**—(i) *British Wheat.* Since the United Kingdom is the largest importer of Australian wheat, the price of wheat in the British markets is a matter of prime importance to the local producer. The table below gives the average prices per Imperial quarter realised for British-grown wheat :—

PRICES OF BRITISH WHEAT PER QUARTER, 1861 TO 1919.

Year.	Average for Year.		Highest Weekly Average.		Lowest Weekly Average.		Year.	Average for Year.		Highest Weekly Average.		Lowest Weekly Average.	
	s.	d.	s.	d.	s.	d.		s.	d.	s.	d.	s.	d.
1861	..	55	4	61	6	50	0	1914	..	34	11	43	3
1871	..	56	8	60	0	52	6	1915	..	52	10	62	0
1881	..	45	4	55	2	40	9	1916	..	58	5	75	10
1891	..	37	0	41	8	32	3	1917	..	75	9	83	10
1901	..	26	9	27	8	25	8	1918	..	72	10	74	5
1911	..	31	8	33	4	30	0	1919	..	72	11	73	4
1913	..	31	8	34	3	30	0						

(ii) *Australian Export Values.* In the next table will be found a statement of the export values of Australian wheat during each of the last five years :—

EXPORT VALUES OF AUSTRALIAN WHEAT, 1915-16 TO 1919-20.

Year	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.
					s. d.	s. d.	s. d.	s. d.	s. d.
Price per bushel	5 7	4 10	5 3	5 1	5 6

The export values here shown are the average declared values for the successive years at the several ports of shipment in the Commonwealth.

5. **Imports and Exports of Wheat and Flour.**—(i) *Quantities.* The table hereunder shows the imports, exports, and net exports of wheat and flour from 1915-16 to 1919-20. For the sake of convenience, flour has been expressed at its equivalent in wheat, one ton of flour being taken as equal to 50 bushels of grain. During 1915-16 the Commonwealth imports of wheat and flour were equivalent to 5,633,596 bushels of wheat occasioned by the failure of the Australian wheat crop during the 1914-15 drought year. In ordinary seasons the import of wheat and flour is negligible. During the past five years the export has ranged between 35,969,195 bushels in 1915-16 and 108,360,358 bushels in 1919-20, the net exports for the period averaging 63,782,847 bushels.

IMPORTS AND EXPORTS OF WHEAT AND FLOUR, COMMONWEALTH, 1915-16 TO 1919-20.

Year.	Imports.			Exports.			Net Exports.
	Wheat.	Flour.	Total.	Wheat.	Flour.	Total.	
	Bushels.	Eq. Bushels.a	Bushels.	Bushels.	Eq. Bushels.a	Bushels.	Bushels.
1915-16	5,616,696	16,900	5,633,596	28,621,445	7,347,750	35,969,195	30,335,599
1916-17	40	3,000	3,040	55,278,872	14,531,650	69,810,522	69,807,482
1917-18	20	1,050	1,070	22,981,772	18,704,150	41,685,922	41,684,852

(a) Equivalent in bushels of wheat.

(ii) *Destination of Exported Breadstuffs.* In the next two tables will be found a list of the principal countries to which the Commonwealth exported wheat and flour during each year of the period 1915-16 to 1919-20. The countries are as shown in the Australian Customs returns, but owing to the fact that in normal times wheat ships are frequently instructed to call for orders at various ports, the countries to which these ports belong cannot always be considered as the ultimate destination of the whole of the wheat said to be exported to them.

EXPORTS OF WHEAT FROM THE COMMONWEALTH, 1915-16 TO 1919-20.

Country to which Exported.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.	Total for Five Years.

For the five years under review the export of wheat to the United Kingdom amounted to 101,698,430 bushels, or 43½ per cent. of the total export for the period, while the export of flour to the United Kingdom aggregated 526,102 tons, or 29 per cent. of the total export. During the quinquennium the heaviest exports of flour have been to the United Kingdom, Egypt, Straits Settlements, France, South Africa, and the Philippine Islands.

(iii) *Exports of Wheat and Flour.* From the foregoing returns it will be seen that the quantity of Australian wheat exported in the form of flour during the past five years represents, on the average, about 28 per cent. of the total equivalent in wheat exported as wheat or flour from the Commonwealth.

A point of some interest in connexion with the export of wheat, and one which bears also on the proportions of wheat and flour exports just referred to, is that concerning the quantity of phosphoric acid which this export has the effect of removing from the Commonwealth, and the necessity which exists for the return to the soil of this substance in some form.

According to an estimate furnished by the chemist to the New South Wales Department of Agriculture (F. B. Guthrie, Esq., F.C.S., etc.), the proportions of milled product from a bushel (60 lbs.) of wheat are, approximately, 42 lbs. of flour, 9 lbs. of bran, and 9 lbs. of pollard, while the percentage of phosphoric acid contained in these products is as follows:—

Flour	0.32 per cent., or 0.13 lb. per bushel.
Bran	3.00 " 0.27 "
Pollard	0.90 " 0.08 "

The total amount of phosphoric acid contained in a bushel of wheat is, therefore, 0.48 lb., of which 0.13 lb. is in the flour and 0.35 lb. in the offal.

During the last ten years the net exports from the Commonwealth of wheat and its milled products have amounted to 409,304,833 bushels of wheat, 2,570,687 tons of flour, and 3,862,980 bushels of bran, pollard, and sharps. On the basis of the figures quoted above this export would contain no less than 257,285,136 lbs. of phosphoric acid, the value of which as a fertilizer would amount to nearly three million pounds sterling.

(iv) *Local Consumption of Wheat.* The estimated consumption of wheat for food and for seed purposes in the Commonwealth during the past ten years is given in the following tables:—

**WHEAT USED FOR HUMAN CONSUMPTION IN THE COMMONWEALTH,
1911 TO 1919-20.**

Year.	Flour Milled.	Net Exports of Flour.		Net Quantity Available for Home Consumption.		Net Quantity Available per Head of Population.

1917	10,910,669	9,713,000	.890	1.968
1918	9,428,398	9,054,000	.960	1.800
1919	8,250,572	7,774,000	.942	1.482
Aggregate for 10 years ..	104,072,622	96,009,000	.923	1.977

In addition to the above, there is to be taken into consideration grain fed to poultry and other live stock. This, doubtless, varies in quantity from year to year according to the prices current for wheat, and other causes. No data are available on which to base an estimate of actual quantity so consumed. The flour available for human consumption necessarily fluctuates from year to year coincident with stocks being heavy or light. In some years the flour available per head of population, after deducting net exports from quantity milled, shews a substantial increase over the average for the previous year, this, however, being counterbalanced by a decline in the following year. The average quantity of flour consumed per annum for the ten years under consideration was 0.1090 tons per head of population, which, when expressed in equivalent terms in wheat, represents 5.448 bushels. The estimates of quantity of grain used for seed purposes have been based on data supplied by the Agricultural and Statistical Departments of the several States giving average quantities of seed used per acre for wheat sown either for grain or hay. The average annual quantity thus used during the ten years was 1,977 bushels per head of population, and 0.923 bushels or nearly 55½ lbs. per acre sown.

6. Value of the Wheat Crop.—The estimated value of the wheat crop in each State and in the Commonwealth during the season 1919-20 is shewn below:—

VALUE OF THE WHEAT CROP, (a) 1919-20.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Fed. Ter.	C'wealth.
Aggregate value..	£ 2,413,420	£ 5,757,622	£ 101,282	£ 6,741,186	£ 5,330,901	£ 78,316	£ 450	£ 20,423,177
Value per acre ..	£1/12/9	£3/0/0	£2/3/7	£3/10/0	£5/2/4	£6/16/3	£3/4/9	£3/3/8

(a) Exclusive of the value of straw.

7. The Australian Wheat Marketing Scheme.—(i) *General Principles.* Owing to the abnormal conditions prevailing, a Wheat Marketing Scheme was entered into by the Governments of the Commonwealth and of the States of New South Wales, Victoria, South Australia, and Western Australia, for the purpose of realizing to the best advantage the 1915-16 wheat harvest of the States named, and of making advances to farmers pending realization. It was subsequently decided that the 1916-17 harvest, and later, the 1917-18, 1918-19, 1919-20 and 1920-21 harvests, should be dealt with on similar lines to those of the 1915-16 harvest.

The general principles of the scheme may be shortly stated thus:—

1. That all growers should participate equitably in the realization of the harvest and the proceeds thereof.
2. That the limited freights available should be allotted between the States in accordance with the exportable surplus of each.

The securing and general allotment of freights with the exception of the 1920-21 crop was under the control of the Chartering Agents, who were responsible to the Commonwealth Government. The Australian Wheat Board made its own chartering arrangements for 1920-21.

The distribution of freights among the States is in charge of the Australian Wheat Board, which also has the duty of realizing the crop. This Board consists of Ministerial representatives of the Governments of the Commonwealth and of the States and representatives of the growers, one from each State. It has the assistance of an Advisory Board consisting of well-known wheat shippers. A London Wheat Committee, consisting of the High Commissioner and the Agents-General of the States concerned, acting with the advice of the London representatives of the wheat-shippers, arranges overseas sales. Adjustments are to be made between the States so that, having regard to the quantity shipped, each will ultimately receive the average net result of the whole of the overseas realizations.

In certain States the crop is bought by the State Government, and in others the wheat is received from the growers for sale on their behalf.

The Australian Wheat Board fixes all prices at which wheat may be sold, except in the case of poultry feed, which is left to the States to regulate.

Each State has a local Board or Commission to control the operations of the scheme within the State concerned. This Board or Commission effects all local sales, including sales to millers.

(ii) *Advances and Finance.* Under arrangements with the Australian banks made by the Commonwealth and State Governments, advances are made to farmers upon delivery of their wheat at railway stations to representatives of agents appointed by the different State Governments. The following advances per bushel have been made in respect of the six pools for each of the States up to the 1st August, 1921 :—

POOLED WHEAT ADVANCES PER BUSHEL, 1915-16 TO 1920-21.

State.	1915-16. (b)	1916-17.	1917-18. (a)	1918-19. (a)	1919-20. (a)	1920-21.
	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>
New South Wales	4 10	3 3	4 0	4 10	7 6	6 3
Victoria ..	4 9	(a) 4 0	5 0	5 2	7 6	6 3
South Australia	4 7½	3 3	4 9	5 4	8 9	6 3
Western Australia	4 7½	(a) 4 1½	4 9	5 2	8 6	6 3

(a) Less rail freight.

(b) Less rail freight and handling charges.

Proceeds of wheat as realized are applied in reduction of the bank overdrafts caused by payment of advances and expenses. The rate of interest payable to the banks is six per cent. for 1920-21, five per cent. being the rate for previous pools. The Government of each State has undertaken to repay all advances made on account of such State, and the Commonwealth Government has guaranteed repayment by the States. Advances to growers are made by means of certificates issued by the agents appointed by the various States. The certificates are payable at banks named by the growers.

(iii) *Results of the Scheme.* In all the States, certain wheat, particularly seed wheat, has not been brought under the scheme. The quantity of wheat pooled therefore differs from that harvested in each State. In addition, wheat grown in one State may be pooled in another. A considerable quantity of New South Wales wheat is included in Victorian returns, and the Victorian total also includes a small quantity of South Australian wheat.

Deliveries made on account of each harvest to 1st August, 1921, are as follows :—

WHEAT POOLED IN EACH STATE, 1915-16 TO 1920-21.

State in which Pooled.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21. (to 1/8/1921).
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
New South Wales ..	58,574,000	32,050,000	33,714,000	13,918,000	457,000	50,982,000

The value realized to 1st August, 1921 (all pools) is as follows:—

TOTAL VALUE OF POOLED WHEAT SOLD IN EACH STATE TO 1st AUGUST, 1921.

Particulars.	N.S.W.	Victoria.	S. Aust.	W. Aust.	Total.
	£	£	£	£	£
Oversea shipments and Australian Wheat Board flour contracts	26,989,000	41,218,000	35,808,000	12,555,000	116,570,000
Local sales	22,380,000	19,861,000	7,574,000	6,053,000	55,868,000
Total shipments and local deliveries	49,369,000	61,079,000	43,382,000	18,608,000	172,438,000

Since the initiation of the "Pool," several sales of magnitude have been made, notably one of 3,000,000 tons to the British Wheat Commission, at a rate of 4s. 9d. per bushel f.o.b., equalling £26,600,000, which is the largest wheat transaction ever recorded, and another of 1,500,000 tons to the same purchaser for £15,400,000, at the rate of 5s. 6d. per bushel.

§ 5. Oats.

1. *Progress of Cultivation.*—Oats came next in importance to wheat amongst the grain crops cultivated last season, but while wheat grown for grain accounted for 48 per cent., oats represented only 8 per cent. of the area under crop in the Commonwealth. The progress of cultivation of oats since 1860 is shewn in the table hereunder, and more fully in the graphs hereinafter:—

CULTIVATION OF OATS, 1860-1 TO 1919-20.

The principal oat-growing State of the Commonwealth is Victoria. During the past five seasons it has produced 56 per cent. of the total quantity of oats grown in the Commonwealth; South Australia, Western Australia, Tasmania, and New South Wales come next in order of importance. In New South Wales and Tasmania, the highest production of oats for any season was that of 1909-10, while Victoria experienced its maximum yield in 1903-4, South Australia in 1915-16, Queensland in 1916-17, and Western Australia in 1912-13. For the Commonwealth as a whole, the record yield was that of 17,541,210 bushels in the season 1903-4, while the yields of 16,538,979 and 16,248,857 for 1915-16 and 1908-9 respectively rank second and third.

3. Average Yield.—The average yield per acre of the oat crop of the Commonwealth varies considerably in the different States, being highest in Tasmania and lowest in South Australia. Particulars as to average yield in each of the last five seasons, and for the decennium 1910-20, are given in the succeeding table :—

AVERAGE YIELD OF OATS PER ACRE, 1915-16 TO 1919-20.

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Fed. Ter.	C'wealth.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
1915-16	23.00	26.36	7.24	16.87	14.78	27.99	16.08	22.92
1916-17	16.16	18.77	16.55	12.13	13.82	18.28	18.06	16.61
1917-18	17.60	20.94	14.89	11.72	9.50	16.95	37.56	16.87
1918-19	14.72	15.38	12.19	9.58	10.60	23.42	25.30	13.59
1919-20	7.71	11.80	7.91	8.50	12.96	25.78	14.53	11.75
Average for 10 seasons 1910-20	(a)16.79	17.18	16.22	10.57	12.23	26.50	(b)18.26	15.94

(a) Including Federal Territory.

(b) Average for nine seasons.

The smallest average yield per acre ever recorded for the Commonwealth was that experienced in the abnormally dry season 1914-15, viz., 5.60 bushels, while the largest in the past ten years was that of the season 1915-16, amounting to 22.92 bushels per acre.

4. Relation to Population.—The State in which oat production occupies the most important position in relation to population is Tasmania, the yield for that State representing about 5.72 bushels per head during the last five years under review, as compared with 2.56 bushels per head for the Commonwealth as a whole. Particulars for the seasons 1915-16 to 1919-20 are furnished in the succeeding table :—

OAT PRODUCTION PER 1,000 OF POPULATION, 1915-16 TO 1919-20.

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Fed. Ter.	C'wealth.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
1915-16	719	6,574	4	4,868	4,837	10,892	820	3,353
1916-17	583	5,926	162	4,251	5,471	5,033	877	2,875
1917-18	768	4,352	66	2,862	2,936	2,900	1,410	2,105
1918-19	659	3,687	5	3,457	4,785	4,062	601	2,076
1919-20	293	4,414	4	3,491	7,498	5,731	1,696	2,394

5. Value of Oat Crop.—The estimated value of the oat crop of the several States of the Commonwealth for the season 1919-20 is as follows :—

VALUE OF OAT CROP, (a) 1919-20.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Fed. Ter.	C'wealth.
Aggregate value..	£190,700	£1,925,895	£861	£408,560	£572,509	£341,620	£1,000	£3,441,205
Value per acre ..	£2/10/1	£3/8/10	£2/7/5	£2/2/6	£2/19/8	£7/1/10	£4/14/8	£3/4/5

(a) Exclusive of the value of straw.

6. **Imports and Exports.**—The production of oats in the Commonwealth has not yet reached such a stage as to admit of a regular export trade in this cereal; in fact in certain years the imports have exceeded the exports, notably in 1903, 1906, 1908, 1910, and in each of the four years prior to 1916-17. The quantities and values of oats imported into and exported from the Commonwealth during the years 1915-16 to 1919-20 are given hereunder:—

COMMONWEALTH IMPORT AND EXPORT OF OATS, 1915-16 TO 1919-20.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Bushels.	£	Bushels.	£	Bushels.	£
1915-16 ..	2,473,412	501,755	582,055	85,119	- 1,891,357	- 416,636
1916-17 ..	3,700	635	670,985	97,879	667,285	97,244
1917-18 ..	838	219	368,113	53,809	367,275	53,590
1918-19 ..	41,728	9,713	149,413	35,326	107,685	25,613
1919-20 ..	146,700	41,759	290,323	83,175	143,623	41,416

NOTE.—The minus sign (—) signifies net imports.

The principal countries from which the Commonwealth imports of oats have been obtained are the Dominion of New Zealand, Chile, Japan, and the United States of America, while the principal countries to which oats were exported during the period under review were New Zealand, Java and the United Kingdom.

7. **Oatmeal, etc.**—Importations of oatmeal, etc., into the Commonwealth take place principally from the United Kingdom, the United States, and New Zealand. The total importations of oatmeal, wheatmeal, and rolled oats during 1919-20 amounted to 237,490 lbs., and represented a value of £6,029, while the exports amounted to 2,312,225 lbs., valued at £32,347, principally to India, New Zealand, Java and Papua.

8. **Comparison with Other Countries.**—A comparison of the Australian production of oats with that of the leading oat-producing countries of the world is furnished in the following table:—

PRODUCTION OF OATS IN VARIOUS COUNTRIES, 1919.

Country.	Quantity of Oats Produced.	Country.	Quantity of Oats Produced.	Country.	Quantity of Oats Produced.
	Bushels.		Bushels.		Bushels.
United States ..	1,210,361,000	Sweden ..	62,825,000	Norway ..	12,391,000
Russia in Europe (1916) ..	674,593,000	Argentine Rep. ..	46,849,000	Rumania ..	12,131,000
Canada ..	343,825,000	Denmark ..	38,994,000	Algeria ..	8,695,000
Germany ..	253,951,000	Czecho-Slovakia ..	37,814,000	Japan ..	8,140,000
United Kingdom ..	203,960,000	Italy ..	28,482,000	New Zealand ..	6,968,000
France ..	138,057,000	Spain ..	27,000,000	Union of South Africa ..	6,270,000
Russia in Asia (1915) ..	82,243,000	Belgium ..	22,082,000	Bulgaria ..	6,060,000
Hungary (1915) ..	78,449,000	Netherlands ..	19,884,000	Tunis ..	2,826,000
Austria (1916) ..	76,475,000	Australia ..	12,559,000	Switzerland ..	2,272,000

9. Comparison of Yields.—The average yield per acre of oats in Australia is a very low one compared with the results obtained in other countries, where the cultivation of this cereal is more extensively carried on. Arranging the countries contained in the foregoing table according to the magnitude of the average yield of oats for the years specified, the results are as follows :—

YIELD OF OATS PER ACRE, VARIOUS COUNTRIES, 1919.

Country.	Average per Acre.	Country.	Average per Acre.	Country.	Average per Acre.
	Bushels.		Bushels.		Bushels.
Netherlands ..	54.0	Hungary (1915)	29.5	Rumania ..	20.3

(a) Year ended 30th June, 1920.

§ 6. Maize.

1. States Growing Maize.—The only States in which maize is at all extensively grown for grain are those of New South Wales and Queensland, the area so cropped in these two States during the season 1919–20 being 241,769 acres, or 91 per cent. of the total for the Commonwealth. Of the balance, Victoria contributed 23,474 acres, South Australia 165 acres, Western Australia 11 acres, and the Northern Territory 50 acres. The climate of Tasmania prevents the growing of maize for grain in that State. In South Australia, prior to 1903, particulars concerning maize had not been specially asked for on the form used in the collection of agricultural statistics. In all the States, maize is grown to a greater or less extent as green forage, particularly in connexion with the dairying industry.

2. Area under Maize.—The area devoted to the growing of maize for grain in each State, from 1880 onwards, is given in the following table, and the actual fluctuations from year to year are shewn more fully on the graph hereinafter.

The total area under maize in the Commonwealth exceeded 350,000 acres for the first time in the season 1909–10, and although it fluctuated somewhat during the succeeding eight years, it may be considered to have remained at about that figure. During the last two years, however, the area under maize has diminished considerably, the 1919–20 area exhibiting a deficit of nearly 100,000 acres on the 1909–10 total. This decline has occurred principally in New South Wales.

AREA UNDER MAIZE, 1880-1 TO 1919-20.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	N. Ter.	F. Ter.	C'wealth.

(a) Particulars for years prior to 1907-8 not available.

3. **Total Yield.**—The average yield for the season 1919-20 was the lowest since the disastrous drought year of 1902. The 1910-11 crop was a record one, and exceeded 13,000,000 bushels, while the average annual production of maize during the last decade was 8,580,904 bushels. Particulars concerning the yield from 1880 onwards are given hereunder :—

MAIZE CROP, 1880-1 TO 1919-20.

(a) Particulars for years prior to 1907-8 not available.

4. **Average Yield.**—In the following table particulars are given of the average yield per acre of the maize crops of the several States for the seasons 1915-16 to 1919-20, and also for the decennium 1910-20 :—

AVERAGE YIELD OF MAIZE PER ACRE, 1915-16 TO 1919-20.

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	N. Ter.	F. Ter.	C'wealth.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
1915-16 ..	24.48	44.92	13.68	22.56	9.75	10.00	17.73	20.99
1916-17 ..	27.89	50.80	16.64	8.49	18.61	10.00	10.00	23.68
1917-18 ..	24.01	54.93	25.37	11.37	7.23	17.28	20.43	26.63
1918-19 ..	18.26	31.55	27.46	15.68	15.97	13.33	..	24.10
1919-20 ..	29.68	37.44	17.39	10.97	7.64	10.00	..	25.48
Average for 10 seasons 1910-20	a27.23	44.33	22.13	13.75	12.90	17.50	b14.41	25.93

(a) Including Federal Territory.

(b) Average for nine seasons.

The extraordinarily high average yield obtained in Victoria is due, in large measure, to the fact that the area under maize in that State is comparatively small and is situated in districts that are peculiarly suited to the production of this grain. The average yield in New South Wales is appreciably higher than that obtained in Queensland.

5. Value of Maize Crop.—The value of the Commonwealth maize crop for the season 1919-20 has been estimated at £2,861,951, made up as follows :—

VALUE OF MAIZE CROP, 1919-20.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	N. Ter.	C'wealth.
	£	£	£	£	£	£	£

Value per acre ..	£12/12/4	£17/6/4	£6/19/2	£5/9/8	£4/9/1	£2/8/0	£10/15/7

6. Relation to Population.—During the past ten seasons the Commonwealth production of maize has ranged between 1.29 bushels per head of population in 1919-20 and 3 bushels per head in 1910-11. The production in Queensland, the State in which the maize yield per head of population is highest, ranged during the same period between 2½ bushels per head in 1919-20 and 7½ bushels per head in 1910-11. Details for the several States during the past five seasons are as follows :—

MAIZE PRODUCTION PER 1,000 OF POPULATION, 1915-16 TO 1919-20.

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	N. Ter.	F. Ter.	C'wealth.

Spain ..	23,844,000	Uruguay ..	2,597,000

8. Comparison of Yields.—The average yield per acre of maize in the Commonwealth during 1919 was 25.5 bushels, and may be regarded as highly satisfactory when compared with that of other maize-producing countries. Canada, Egypt, Argentine Republic,

Hungary, United States and Japan are the only countries shewing a higher average. The remaining countries shewn in the following table had average yields per acre ranging from 10.1 to 21.6 bushels.

AVERAGE YIELD OF MAIZE PER ACRE IN VARIOUS COUNTRIES, 1919.

Country.	Average Yield per Acre.	Country.	Average Yield per Acre.

Spain	20.2	Russia in Asia (1913)	10.1
Rumania	19.5		

(a) Average yield for 10 years, 25.9 bushels.

9. **Oversea Imports and Exports.**—The Commonwealth oversea trade in maize is practically insignificant, any importation or exportation depending solely on the success or failure of the Australian crop. During the past five years owing to droughty conditions the total net import amounted to nearly 4,000,000 bushels. Details of imports and exports for the years 1915-16 to 1919-20 are as follows :—

COMMONWEALTH IMPORTS AND EXPORTS OF MAIZE, 1915-16 TO 1919-20.

Year.	Imports.		Exports.		Net Imports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Bushels.	£	Bushels.	£	Bushels.	£
1915-16	3,432,571	712,650	4,237	1,088	3,428,334	711,562
1916-17	41,952	8,162	50,296	11,894	— 8,344	— 3,732
1917-18	3,226	770	128,988	29,069	— 125,762	— 28,299
1918-19	255,605	73,774	84,120	20,804	171,485	52,970
1919-20	494,278	158,361	6,632	3,001	487,646	155,360

NOTE.—The minus sign (—) signifies net exports.

The principal countries to which maize has been exported from the Commonwealth are New Zealand and the Pacific Islands, while the principal countries from which importations have taken place are South Africa, Java, and the Pacific Islands.

10. **Prepared Maize.**—A moderate quantity of corn-flour is imported annually into the Commonwealth, the principal countries of supply being the United Kingdom and the United States. During the year 1919-20 these importations amounted to 320,803 lbs., and represented a value of £6,572. The exports of this commodity have been steadily increasing in dimensions during recent years, the amount exported during 1919-20 amounting to 401,878 lbs., valued at £10,086.

11. **Price of Maize.**—The average wholesale price of maize in the Sydney market is given in the following table for each of the last five years :—

AVERAGE SYDNEY PRICE OF MAIZE PER BUSHEL, 1915-16 TO 1919-20.

Particulars.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.
	s. d.	s. d.	s. d.	s. d.	s. d.

§ 7. Barley.

1. **Area under Barley.**—The area devoted to barley in the Commonwealth has fluctuated very considerably, though with a tendency to increase during the past few years. Originally the principal barley-growing State was Victoria, but for the past seven seasons South Australia has attained the lead in regard to acreage, and for 1919–20 accounted for more than 59 per cent. of the Commonwealth area devoted to this crop; Victoria was next in importance with a percentage of nearly 32; the remaining 9 per cent. being represented by Western Australia, Tasmania, New South Wales, and Queensland, in the order named. The figures here given relate to the areas harvested for grain; only small areas are cropped for hay, while more considerable quantities are cut for green forage. These, however, are not included in this sub-section. The area under barley for grain in the several States from 1880 onwards is shewn in the following table:—

COMMONWEALTH AREA UNDER BARLEY, 1880–1 TO 1919–20.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1880–1 ..	8,056	68,630	1,499	13,074	6,363	8,297	105,919
1890–1 ..	4,937	87,751	584	14,472	5,322	4,376	117,442
1900–1 ..	9,435	58,853	7,533	15,352	2,536	4,502	98,211
1910–11 ..	7,082	52,687	5,578	34,473	3,369	5,235	108,424
1915–16 ..	6,369	61,400	1,367	84,900	10,069	5,409	169,514
1916–17 ..	5,195	93,015	12,674	103,627	11,105	4,637	230,253
1917–18 ..	6,370	84,931	7,702	95,654	5,028	5,185	204,870
1918–19 ..	7,980	100,198	1,316	130,357	7,982	7,036	254,869
1919–20 ..	5,354	85,323	3,275	157,897	9,167	6,293	267,309

2. **Total Yield.**—Despite a greater acreage in South Australia, Victoria, with its higher average yield per acre, produced the greatest quantity of barley during the past ten years. For the past two years, however, South Australian production exceeded that of Victoria, the excess in 1919–20 amounting to 920,282 bushels. Particulars concerning the yields of the several States from 1880 onwards are as follows:—

COMMONWEALTH BARLEY CROP, 1880–1 TO 1919–20.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
1880–1 ..	163,395	1,068,830	31,433	151,886	89,082	169,156	1,673,782

1918–19 ..	86,313	2,028,635	8,824	2,417,349	81,451	141,149	4,763,721
1919–20 ..	38,892	1,528,654	34,892	2,448,936	116,037	120,516	4,287,927

3. **Malting and other Barley.**—In recent years the statistics of all the States have distinguished between "malting" and "other" barley. Particulars for 1919-20 season are as follows :—

MALTING AND OTHER BARLEY, 1919-20.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Malting barley ..	3,772	50,049	2,979	137,932	4,896	5,124	204,752
Other barley	1,582	35,274	296	19,965	4,271	1,169	62,557
Total ..	5,354	85,323	3,275	157,897	9,167	6,293	267,309
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
Malting barley ..	25,014	917,274	31,637	2,215,029	62,708	100,365	3,352,027
Other barley	13,878	611,380	3,255	233,907	53,329	20,151	935,900
Total ..	38,892	1,528,654	34,892	2,448,936	116,037	120,516	4,287,927

Taking the Commonwealth as a whole, over 76 per cent. of the area devoted to this grain in 1919-20 was cropped for malting barley. The proportion varies considerably in the several States.

4. **Total Acreage and Yield.**—The following table sets out the total acreage and yield of malting and other barley in the Commonwealth as a whole during the past five seasons :—

**AREA AND YIELD, MALTING AND OTHER BARLEY, COMMONWEALTH,
1915-16 TO 1919-20.**

Season.	Acres.			Bushels.			Average Bushels per Acre.		
	Malting.	Other.	Total.	Malting.	Other.	Total.	Malting.	Other.	Total.
1915-16 ..	106,217	63,297	169,514	2,365,126	1,436,424	3,801,550	22.27	22.69	22.43
1916-17 ..	141,846	88,407	230,253	2,505,118	1,575,374	4,080,492	17.66	17.82	17.72
1917-18 ..	136,785	68,085	204,870	2,602,449	1,394,409	3,996,858	19.03	20.48	19.51
1918-19 ..	179,186	75,683	254,869	3,419,863	1,343,858	4,763,721	19.09	17.76	18.69
1919-20 ..	204,752	62,557	267,309	3,352,027	935,900	4,287,927	16.37	14.96	16.04
Average 10 seasons									
1910-20	130,687	60,244	190,931	2,361,522	1,070,698	3,432,220	18.07	17.77	17.98

For the past ten seasons the area and production of malting barley have represented approximately twice the corresponding figures for other barley. The average yield per acre differs very little in respect of the two classes of barley, malting obtaining a slight average advantage of 0.30 bushels per acre during the last ten years.

5. Value of Barley Crop.—The estimated value of the total barley crop of the Commonwealth for the seasons 1915-16 to 1919-20 was £655,917, £734,154, £834,075, £1,221,863, and £1,360,411 in the order named. The extent to which the several States have contributed to the latter total is shewn in the following table:—

VALUE OF BARLEY CROP,(a) 1919-20.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
Total value ..	£13,460	£537,582	£9,305	£725,557	£39,525	£34,982	£1,360,411
Value per acre ..	£2/10/3	£6/6/0	£2/16/10	£4/11/11	£4/6/3	£5/11/2	£5/1/9

(a) Exclusive of the value of straw.

6. Relation to Population.—During the last five seasons the quantity of barley produced in the Commonwealth has averaged a little over three-quarters of a bushel per head of population. For the season 1919-20 the production ranged from 5½ bushels per head in South Australia to 0.02 pounds per head in New South Wales. Details for the years 1915-16 to 1919-20 are as follows:—

BARLEY PRODUCTION PER 1,000 OF POPULATION, 1915-16 TO 1919-20.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
1915-16 ..	61	1,222	12	3,872	412	575	771
1916-17 ..	39	1,287	374	4,008	434	444	837
1917-18 ..	52	1,397	212	3,785	116	482	810
1918-19 ..	45	1,418	13	5,424	260	676	947
1919-20 ..	19	1,022	48	5,231	350	556	817

7. Commonwealth Imports and Exports.—The Commonwealth overseas trade in barley is not large, though it shews signs of extension during recent years. Owing to the severe drought during 1914-15, the barley crop for that year was very low, and a fairly heavy importation of barley was necessary, the bulk of which came from the United States. During the next five years, however, the Commonwealth exported 1,976,102 bushels of barley valued at £568,637, principally to New Zealand, United Kingdom, and Japan. Particulars of the Commonwealth overseas imports and exports of barley for the years 1915-16 to 1919-20 are contained in the following table:—

COMMONWEALTH IMPORTS AND EXPORTS OF BARLEY, 1915-16 TO 1919-20.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Bushels.	£	Bushels.	£	Bushels.	£
1915-16 ..	147,144	27,387	185,122	36,661	37,978	9,274
1916-17 ..	58	9	256,804	52,891	256,746	52,882
1917-18 ..	34	8	282,252	64,703	282,218	64,695
1918-19 ..	456	203	176,478	49,573	176,022	49,370
1919-20 ..	438	236	1,075,446	364,809	1,075,008	364,573

NOTE.—The minus sign (—) signifies net imports.

From time to time an export trade in Australian pearl and scotch barley has been carried on, the total exports for 1919-20 reaching 2,513,758 lbs., valued at £29,124. The trade for the year was mainly with the South African Union, New Zealand, and Japan.

8. **Commonwealth Imports and Exports of Malt.**—In pre-war times the importations of malt into the Commonwealth were fairly extensive, the supply being obtained principally from the United Kingdom. Since the outbreak of the war in 1914, however, imports have continuously declined, and the quantities exported have practically remained negligible, with the exception of 1917-18, when 117,075 bushels, valued at £47,626, were exported mainly to Japan, South Africa, and the Philippines. Details of imports and exports for the years 1915-16 to 1919-20 are given hereunder:—

COMMONWEALTH IMPORTS AND EXPORTS OF MALT, 1915-16 TO 1919-20.

Year.	Imports.		Exports.		Net Imports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Bushels.	£	Bushels.	£	Bushels.	£
1915-16	23,910	9,596	30	13	23,880	9,583
1916-17	7,452	4,196	73	35	7,379	4,161
1917-18	35	106	117,075	47,626	-117,040	-47,520
1918-19	1	1
1919-20

NOTE.—The minus sign (—) signifies net exports.

9. **Comparison with other Countries.**—In comparison with the barley production of other countries of the world, that of Australia appears very small indeed. Particulars for some of the leading countries for the year 1919 are as follows, the Australian figures being added for the sake of comparison:—

PRODUCTION OF BARLEY IN VARIOUS COUNTRIES, 1919.

Country.	Production of Barley.	Country.	Production of Barley.
	Bushels.		Bushels.
Russia in Europe (1916) ..	336,213,000	Sweden	12,372,000
United States	160,681,000	Rumania	11,504,000
British India (1918) ..	150,555,000	Argentine Republic ..	10,579,000
Japan	87,798,000	Bulgaria	9,954,000
Germany	84,209,000	Egypt (1918)	9,475,000
Spain	78,515,000	Italy	7,992,000
United Kingdom	57,704,000	Tunis	5,730,000
Hungary (1915)	54,466,708	Norway	5,062,000
Canada	54,134,000	Australia	4,288,000
Austria (1916)	37,469,000	Chile	3,855,000
Russia in Asia (1915) ..	35,452,000	Belgium	3,471,000
Algeria	27,243,000	Netherlands	2,580,000
Denmark	23,539,000	Serbia (1915)	2,181,150
France	22,674,000	Union of South Africa ..	1,113,000
Czecho-Slovakia	20,700,000		

10. Average Yield of Barley per Acre in various Countries.—The following table shows the average yield of barley per acre in various countries of the world, ranging from 46 bushels in Belgium to 6 bushels in Tunis :—

AVERAGE YIELD OF BARLEY PER ACRE IN VARIOUS COUNTRIES, 1919.

Country.	Average yield per Acre.	Country.	Average yield per Acre.
	Bushels.		Bushels.
Belgium	46.2	Canada	20.5
Netherlands	44.1	Rumania	19.6
Denmark	41.4	Hungary (1915)	19.3
Chile	39.3	Spain	18.5
New Zealand	35.6	India (1918)	18.1
Norway	32.4	Argentine Republic	17.2
United Kingdom	30.9	Union of South Africa (1917)	17.0
Japan	30.0	France	16.9
Sweden	30.0	Russia in Asia (1916)	16.9
Egypt (1918)	28.2	Italy	16.7
Germany	27.0	Australia	16.0
Czecho-Slovakia	23.2	Russia in Europe (1916)	15.3
United States	21.7	Algeria	10.3
Bulgaria	21.0	Tunis	5.9

11. Average Yield.—The average yield per acre of barley varies considerably in the different States, being as a rule highest in Tasmania and Victoria, and lowest in Western Australia. Details for each State during the past five seasons, and for the decennium 1910-20, are given in the following table :—

AVERAGE YIELD PER ACRE OF BARLEY, 1915-16 TO 1919-20.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
1915-16	18.03	28.25	5.95	20.00	13.00	21.36	22.43
1916-17	14.12	19.35	19.74	16.74	12.07	19.13	17.72
1917-18	15.36	23.20	18.64	17.26	7.11	18.90	19.51
1918-19	10.82	20.25	6.71	18.54	10.20	20.06	18.69
1919-20	7.26	17.92	10.65	15.51	12.66	19.15	16.04
Average for 10 seasons 1910-20	13.79	20.82	15.48	16.37	11.47	22.69	17.98

12. Price of Barley.—The average price of barley in the Melbourne market during each of the past five years is given in the following table :—

AVERAGE MELBOURNE PRICE OF BARLEY PER BUSHEL, 1915 TO 1919.

Particulars.	1915.	1916.	1917.	1918.	1919.
	s. d.	s. d.	s. d.	s. d.	s. d.
Malting barley	5 4½	4 4½	4 4½	5 9	5 9½
Cape barley	4 4½	3 1½	3 1½	4 0	4 6½

§ 8. Other Grain and Pulse Crops.

In addition to the grain crops already specified, the only grain and pulse crops at all extensively grown in the Commonwealth are beans, peas, and rye. The total area under the two former crops for the season 1919-20 was 39,553 acres, giving a yield of 520,919 bushels, or an average of 13.17 bushels per acre, being less than the average yield for the decennium ended 1919-20, which was 16.32 bushels per acre. The States in which the greatest area is devoted to beans and peas are Tasmania, Victoria and South Australia. The total area under rye in the Commonwealth during the season 1919-20 was 3,663 acres, yielding 32,472 bushels, and giving an average of 8.86 bushels per acre. This was below the average for the past ten seasons, which was 11.08 bushels per acre. Over 35 per cent. of the rye grown during the season was produced in New South Wales and 26 per cent. in Victoria. In addition to these grain crops a small area of rice has for some years been cultivated in Queensland and the Northern Territory. The results obtained, however, have not up to the present been very satisfactory. Should rice-growing ever be seriously taken up in Australia, it is probable that large tracts of country in the northern parts of Queensland and Western Australia and in the Northern Territory will be found well suited to its cultivation.

§ 9. Potatoes.

1. Area.—The principal potato-growing State of the Commonwealth as regards area is Victoria; Tasmania, for some years prior to 1909-10, usually ranking second, and New South Wales third. The relative positions of the two latter States were, however, reversed during the five seasons ended 1913-14, but Tasmania again took the lead over New South Wales in the last six seasons ended 1919-20.

The area under potatoes in each State from 1890 onwards is given hereunder :—

COMMONWEALTH AREA UNDER POTATOES, 1890-1 TO 1919-20.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	F. Ter.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1890-1 ..	19,406	53,818	6,270	6,626	511	20,133	..	108,764
1900-1 ..	29,408	38,477	11,060	6,628	1,794	23,068	..	110,435
1910-11 ..	44,452	62,904	8,326	7,812	1,791	26,230	..	151,515
1915-16 ..	19,582	56,910	5,796	4,341	4,866	29,491	7	120,993
1916-17 ..	22,437	73,618	8,908	4,737	5,838	34,345	12	149,895
1917-18 ..	22,558	66,966	10,738	4,164	4,484	27,309	22	136,241
1918-19 ..	20,877	51,620	6,434	3,275	3,936	25,023	2	^a 111,169
1919-20 ..	20,043	53,918	4,432	3,411	3,585	28,511	7	113,907

(a) Includes 2 acres in Northern Territory.

GRAPHS SHEWING THE AREA UNDER THE PRINCIPAL CROPS IN THE
COMMONWEALTH FROM 1860-1 TO 1919-20.

(See pages—for wheat, 252; oats, 262; maize, 266; barley, 269; hay, 279; sugar-cane, 283; and vineyards, 287.)

EXPLANATION OF GRAPHS.—The base of each small square represents an interval of one year, while the vertical height represents a number of acres, varying with the nature of the crop in accordance with the scale given on the left-hand of the diagram. The height of each graph above the base line denotes, for the crop to which it relates, the total area under cultivation in the Commonwealth during the successive seasons.

GRAPHS SHEWING THE PRODUCTION OF THE PRINCIPAL CROPS IN THE COMMONWEALTH
FROM 1860-1 TO 1919-20.

(See pages—for wheat, 253 ; oats, 262 ; maize, 266 ; barley, 269 ; and hay, 280.)

EXPLANATION OF GRAPHS.—In this diagram a separate base line is provided for each of the crops dealt with. In each instance the base of a small square represents an interval of one year, the vertical height of such square representing in the case of wheat 10,000,000 bushels ; oats, 2,000,000 bushels ; barley, 500,000 bushels ; maize, 2,000,000 bushels ; and hay, 500,000 tons. The height of each graph above its base line denotes the aggregate yield in the Commonwealth of that particular crop during the successive seasons.

2. Total Yield.—For the season 1919-20, Victoria's production represented about 47½ per cent. of the total for the Commonwealth, Tasmania and New South Wales coming next in order with 25 and 17½ per cent. respectively. The total Commonwealth production for the season 1906-7 viz., 507,153 tons, was the highest ever attained, the yield which most nearly approached it being 449,383 tons in 1903-4. Details as to production in the several States during the period from 1890 onwards are as follows :—

COMMONWEALTH PRODUCTION OF POTATOES, 1890-1 TO 1919-20.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	F. Ter.	C'wealth.

3. Average Yield per Acre.—The suitability of the soil, climate, and general conditions for potato growing is evidenced by the satisfactory yields per acre which are generally obtained in Australia, except in the most northerly portions, the average yield during the past ten seasons being 2.57 tons per acre. The lowest average yield is that obtained in Queensland with an average of 1.83 tons for the same period.

Particulars for each State for the seasons 1915-16 to 1919-20, and also for the past decennium, are given hereunder :—

AVERAGE YIELD OF POTATOES PER ACRE, 1915-16 TO 1919-20.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Fed. Ter.	C'wealth.

(a) Including Federal Territory.

(b) Average for nine seasons.

4. Value of Potato Crop.—The estimated value of the potato crop of each State for the season 1919-20 is furnished in the following table, together with the value per acre :—

VALUE OF POTATO CROP, 1919-20.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Fed. Ter.	C'wealth.
Total value ..	£735,030	£1,444,291	£183,942	£145,558	£235,010	£794,700	£340	£3,538,871
Value per acre	£36/13/5	£26/15/9	£41/10/1	£42/13/6	£65/11/1	£27/17/6	£48/11/5	£31/1/4

5. **Relation to Population.**—The average production of potatoes per annum per head of the population of the Commonwealth for the past five seasons has been approximately 140 lbs. In Tasmania, where this crop is of far greater importance in relation to population than is the case in any other State, the production per head in 1906-7 was nearly a ton, while for the past five seasons it has averaged about 7½ cwt. Details for the seasons 1915-16 to 1919-20 are as follows :—

POTATO PRODUCTION PER 1,000 OF POPULATION, 1915-16 TO 1919-20.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	F. Ter.	C'wealth.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
1915-16 ..	24	122	11	30	44	397	14	67
1916-17 ..	24	134	29	47	55	335	16	73
1917-18 ..	26	129	33	26	37	347	24	70
1918-19 ..	16	96	16	30	37	271	1	52
1919-20 ..	25	98	11	24	40	306	13	56

6. **Commonwealth Imports and Exports.**—Under normal conditions there is generally a fairly large export trade in potatoes carried on by the Commonwealth, principally with New Zealand, the Pacific Islands, and the Philippine Islands. On the other hand, when the recurrence of droughts causes a shortage in some of the States, large importations from New Zealand usually take place. The quantities and values of the Commonwealth overseas imports and exports of potatoes during the past five years are shewn in the following table :—

COMMONWEALTH IMPORTS AND EXPORTS OF POTATOES, 1915-16 TO 1919-20.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Tons.	£	Tons.	£	Tons.	£
1915-16 ..	17,596	149,488	1,208	13,110	- 16,388	- 136,378
1916-17 ..	91	951	4,492	37,579	4,401	36,628
1917-18 ..	38	367	3,348	23,203	3,310	22,836
1918-19 ..	308	3,570	6,742	50,308	6,434	46,738
1919-20 ..	2,614	41,391	1,455	22,954	- 1,159	- 18,437

NOTE.—The minus sign (—) signifies net imports.

§ 10. Other Root and Tuber Crops.

1. **Nature and Extent.**—Root crops, other than potatoes, are not extensively grown in Australia, the total area devoted to them for the season 1919-20 being only 15,927 acres. The principal of these crops are onions, mangolds, sugar beet, turnips, and "sweet potatoes" (*Batatas edulis*). Of these, onions, sugar beet, and mangolds are most largely grown in Victoria, turnips in Tasmania, and sweet potatoes in Queensland. The total area under onions in the Commonwealth during the season 1919-20 was 7,842 acres, giving a yield of 31,552 tons, and averaging 4.02 tons per acre. The area devoted in 1919-20 to root crops other than potatoes and onions, viz., 8,085 acres, yielded 50,506 tons, and gave an average of 6.25 tons per acre. The areas and yields here given are exclusive of the production of "market gardens," a reference to which will be made later.

2. **Commonwealth Imports and Exports.**—The only root crop, other than potatoes, in which any considerable overseas trade is carried on by the Commonwealth is that of onions. During the past five years 4,147 tons, valued at £53,603, were imported, principally from New Zealand, Japan, and the United States, while during the same period, the exports totalled 19,324 tons, valued at £188,682, and were shipped mainly to New Zealand, the Pacific Islands, the Philippines, and the United States.

§ 11. Hay.

1. Nature and Extent.—As already stated, the most important crop of the Commonwealth is that of wheat grown for grain. Next to this in importance is the hay crop, which for the five seasons ended 1919-20 averaged more than 18½ per cent. of the area under crop in the Commonwealth, and for 1919-20 itself, 23½ per cent. In most European countries the hay crop consists almost entirely of meadow and other grasses, whilst in Australia a very large proportion of the area under hay comprises cereal crops, mainly wheat and oats. A considerable quantity of lucerne hay is also made, particularly in New South Wales and Queensland. The area under hay of all kinds in the several States from 1860 onwards is given hereunder :—

AREA UNDER HAY, 1860-1 TO 1919-20.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	N. Ter.	F. Ter.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1860-1	46,584	90,921	276	55,818	6,626	31,837	232,062
1870-1	65,404	163,181	3,671	140,316	17,173	33,612	423,357
1880-1	131,153	249,656	12,022	272,567	19,563	31,615	716,576
1890-1	175,242	413,052	31,106	345,150	23,183	45,381	1,033,114
1900-1	466,236	502,105	42,497	341,330	104,254	61,541	1,517,963
1910-11	638,577	832,669	98,558	440,177	175,432	72,992	2,258,405
1915-16	1,107,228	1,330,455	55,174	709,831	290,036	103,216	140	1,691	3,597,771
1916-17	857,533	897,186	112,964	483,040	240,726	79,274	140	999	2,671,862
1917-18	619,614	748,808	96,431	407,011	265,899	74,107	14	1,030	2,212,914
1918-19	813,379	984,479	54,772	501,731	249,796	87,136	30	1,581	2,692,904
1919-20	938,471	1,116,998	48,843	590,835	327,498	102,908	100	1,671	3,127,324

It will be seen from this table that in all the States marked fluctuations occur in the area devoted to the hay crop from year to year. These fluctuations are due to various causes, the principal being the variations in the relative prices of grain and hay, and the favourableness or otherwise of the season for a grain crop. Thus, crops originally sown for grain are frequently cut for hay owing to the improved price of that commodity, or owing to the fact that the outlook for the due development of the grain is not satisfactory. On the other hand, improved grain prices or the prospect of a heavy yield will frequently cause crops originally intended for hay to be left for grain. The area under hay in the Commonwealth for the season 1915-16 was the highest on record, that for 1912-13 the next highest, while the 1919-20 acreage occupied third position.

2. Kinds of Hay.—Particulars concerning the kinds of crop cut for hay are furnished in the returns prepared by five of the States. In the case of Tasmania the bulk consists of oaten hay; full particulars, however, are not available for that State.

Details for the past five seasons are given in the following table :—

KINDS OF HAY GROWN, 1915-16 TO 1919-20.

Kind of Hay Crop.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.

Lucerne	3,380	2,855	2,123	2,106	2,167
Other	39,707	7,671	4,801	3,050	3,522
Total	709,831	483,040	407,011	501,731	590,835
WESTERN AUSTRALIA—					
Wheaten	225,959	188,272	208,303	190,399	234,772
Oaten	62,622	51,255	56,002	58,551	91,152
Lucerne	258	230	352	137	206
Other	1,197	969	1,242	709	1,368
Total	290,036	240,726	265,899	249,796	327,498

It will be seen that wheaten hay is the principal hay crop in New South Wales, South Australia, and Western Australia, oaten hay in Victoria and Tasmania, and lucerne in Queensland.

3. **Total Yield.**—The Commonwealth hay crop for the season 1915-16 was the highest on record, and amounted to 5,633,988 tons. The second in importance was 3,955,311 tons for the season 1912-13, while the third was 3,507,589 tons for 1916-17. For many years past the State of Victoria has been the largest hay producer in the Commonwealth, and in the five seasons, 1915-16 to 1919-20 inclusive, accounted for nearly 39 per cent. of the total production. The total yields of the several States from 1860 onwards are given hereunder:—

COMMONWEALTH HAY CROP, 1860-1 TO 1919-20.

5. Average Yield per Acre.—The States of the Commonwealth in which the highest average yields per acre have been obtained during the last decennium are those of Tasmania and Queensland, these being also the States in which the smallest areas are devoted to this crop. For the same period the lowest yield for the Commonwealth as a whole was that of 13 cwt. per acre in 1914-15; while the highest was that of 31 cwt. in 1915-16. The average for the decennium was 23½ cwt. Particulars for the several States for the seasons 1915-16 to 1919-20, and the average for the last ten years, are given hereunder:—

AVERAGE YIELD OF HAY PER ACRE, 1915-16 TO 1919-20.

(a) Including Federal Territory.

(b) Average for nine seasons.

6. Relation to Population.—During the past five seasons the Commonwealth hay production per head of population has varied between 11 cwt. in 1917-18 and 22½ cwt. in 1915-16; averaging about 14 cwt. per head for the period. The State in which the hay production per head of population is highest is South Australia. Details for the seasons 1915-16 to 1919-20 are given hereunder:—

HAY PRODUCTION PER 1,000 OF POPULATION, 1915-16 TO 1919-20.

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N. Ter.	F. Ter.	C'wealth.

1919-20 ..	290	831	58	1,279	1,143	660	106	1,227	570

7. Oversea Imports and Exports.—Under normal conditions hay, whether whole or in the form of chaff, is somewhat bulky for oversea trade, and consequently does not in such circumstances figure largely amongst the imports and exports of the Commonwealth. During 1919-20, 259 tons were imported, while the exports amounted to 1,987 tons, valued at £21,392, the principal purchases being made by India, the Philippines, and the Straits Settlements.

8. Hay Production in Other Countries.—As already noted, the hay crops of most European countries consist of grasses of various kinds, amongst which clover, lucerne, sainfoin and rye grass occupy prominent places. The statistics of hay production in these countries are not prepared on a uniform basis, and consequently any attempt to furnish extensive comparisons would be misleading. It may be noted, however, that in Great Britain the production of hay from clover, sainfoin, etc., for the year 1919 amounted to 2,290,000 tons from 1,895,499 acres, while from permanent grasses a yield of 3,608,000 tons of hay was obtained from 4,318,188 acres, giving a total of 5,898,000 tons from 6,213,687 acres, or about 19 cwt. per acre.

§ 12. Green Forage.

1. Nature and Extent.—In all the States of the Commonwealth a considerable area is devoted to the production of green forage, mainly in connexion with the dairying industry. The total area so cropped during the season 1919-20 was 1,401,237 acres. Of the total, the New South Wales area represented about 72 per cent., that of Queensland 11½ per cent., while that of Victoria amounted to 6½ per cent. Under normal conditions the principal crops cut for green forage are maize, sorghum, oats, barley, rye, rape, and lucerne, while small quantities of sugar-cane also are so used. Particulars concerning the area under green forage in the several States from 1890 onwards are furnished in the following table:—

AREA UNDER GREEN FORAGE, 1890-1 TO 1919-20.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	N. Ter.	F. Ter.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.

2. Value of Green Forage Crops.—The value of these crops is variously estimated in the several States, and the Commonwealth total for the season 1919-20 may be taken approximately as £2,627,051, or about £1 17s. 6d. per acre.

3. Relation to Population.—Particulars concerning the area under green forage per 1,000 of the population of the Commonwealth and the several States for the seasons 1915-16 to 1919-20 are given hereunder:—

AREA UNDER GREEN FORAGE PER 1,000 OF POPULATION, 1915-16 TO 1919-20.

Season.	N.S.W.	Vict.	Q'land.	S. Aust.	W. Aust.	Tas.	N. Ter.	F. Ter.	C'wealth.

§ 13. Sugar-cane.

1. Area.—Sugar-cane is grown for sugar-making purposes in only two of the States of the Commonwealth, viz., Queensland and New South Wales, and much more extensively in the former than in the latter. Thus, of the total area of 159,037 acres under sugar-cane in the Commonwealth for the season 1919–20, there were 148,469 acres, or about 93½ per cent., in Queensland. Sugar-cane growing appears to have been started in the Commonwealth in or about 1862, as the earliest statistical record of sugar-cane as a crop is that which credits Queensland with an area of 20 acres for the season 1862–3. In the following season the New South Wales records shew that an area of two acres was devoted to the crop in the mother State. The area under cane in New South Wales reached its maximum in 1895–6 with a total of 32,927 acres. From thence onwards with slight variations, it gradually fell to 10,568 acres in 1919–20. In Queensland, on the other hand, although fluctuations in area are in evidence throughout, the general trend has been one of satisfactory increase, the area under cane for the season 1917–18 being the highest on record. The area under sugar-cane in the Commonwealth from 1870 is given in the following table:—

AREA UNDER SUGAR-CANE, 1870–1 TO 1919–20.

Season.	New South Wales.		Queensland.		Commonwealth.		
	Productive.	Unproductive.	Productive.	Unproductive.	Productive.	Unproductive.	Total.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1870–1 ..	1,475	2,607	2,188	4,154	3,663	6,761	10,424
1880–1 ..	4,465	6,506	12,306	7,918	16,771	14,424	31,195
1890–1 ..	8,344	12,102	39,435	11,487	47,779	23,589	71,368
1900–1 ..	10,472	11,642	72,651	35,884	83,123	47,526	130,649

1916–17 ..	5,223	5,746	75,914	91,307	81,137	97,053	178,190
1917–18 ..	5,588	5,134	108,707	67,055	114,295	72,189	186,484
1918–19 ..	4,566	5,924	111,572	48,962	116,138	54,886	171,024
1919–20 ..	4,827	5,741	84,877	63,592	89,704	69,333	159,037

2. Productive and Unproductive Cane.—The areas given in the preceding table represent the area on which sugar-cane was grown during the seasons specified for purposes other than green forage. The whole area was not in any case cut for crushing during that season, there being always a considerable amount of young and “stand over” cane, as well as a small quantity required for plants. The season 1917–18 had the highest recorded acreage under sugar-cane, while the greatest area of productive cane was cut for crushing during the 1918–19 season.

3. **Yield of Cane and Sugar.**—Queensland statistics of the production of sugar-cane are not available for dates prior to the season 1897-8. In that season the total for the Commonwealth was 1,073,883 tons, as against 2,879,092 tons for the record season 1917-18. The second highest yield was in the season 1913-14, with a total of 2,271,558 tons. The average production of cane during the decennium ended 1919-20 was 1,823,652 tons. The three highest yields of sugar were in 1917-18, 1913-14, and 1914-15, the quantities being 327,589 tons, 265,029 tons, and 245,876 tons respectively. The decennial average was 211,774 tons of sugar. Particulars relative to the total yields of cane and sugar for a series of years are as follows :—

YIELD OF CANE AND CANE-SUGAR, 1900-1 TO 1919-20.

Season.	New South Wales.		Queensland.		Commonwealth.	
	Cane.	Sugar.	Cane.	Sugar.	Cane.	Sugar.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
1900-1 ..	199,118	19,938	848,328	92,554	1,047,446	112,492
1910-11 ..	160,311	20,115	1,840,447	210,756	2,000,758	230,871
1915-16 ..	157,748	19,144	1,152,516	140,496	1,310,264	159,640
1916-17 ..	143,558	16,064	1,579,514	176,973	1,723,072	193,037
1917-18 ..	174,881	19,875	2,704,211	307,714	2,879,092	327,589
1918-19 ..	105,234	12,278	1,674,829	189,978	1,780,063	202,256
1919-20 ..	91,321	10,837	1,258,760	162,136	1,350,081	172,973

Large quantities of molasses are produced as a by-product in the sugar mills; details giving the quantity produced and proportions used for distilling, fuel, manure and other purposes for a series of years will be found in Section XIII.—“Manufacturing Industries.”

4. **Average Yields of Cane and Sugar per Acre.**—The average yield per acre of productive cane is much higher in New South Wales than in Queensland, the average during the last decade being 26.87 tons for the former and 17.54 for the latter State. For some years prior to 1910-11, the yield remained practically constant in New South Wales at about 21 tons per acre. Since that year, the average yield per acre has shewn an upward tendency, reaching 30 tons or over during 1913-14, 1914-15, and 1917-18. The climatic conditions affecting the tremendous length of coastline embracing this industry in Queensland are largely responsible for the great variations in the yields of sugar for that State, which ranged, during the past decennium, from 12.20 tons per acre in 1915-16 to 24.88 tons in 1917-18.

The greatest production of sugar per acre crushed in the Commonwealth during the past quinquennium occurred in 1917-18, when 2.87 tons were obtained, the respective crushings for New South Wales and Queensland averaging 3.56 and 2.83 tons. The average yield per acre for the past ten years was 3.15 tons in New South Wales, and 2.03 tons in Queensland.

5. **Quality of Cane.**—The quantity of cane required to produce a ton of sugar varies not only with the district in which the cane is grown but also with the season, and for the decennium ended 1919-20 averaged 8.61 tons, the average production of sugar being approximately 11½ per cent. of the weight of cane crushed. The systematic study of beet culture in European countries has shewn that by suitable methods the sugar

contents of the root can be greatly increased, and it is believed that a similar improvement can be effected in the yield from sugar-cane.

AVERAGE YIELD OF SUGAR-CANE AND SUGAR PER ACRE, 1900-1 TO 1919-20.

6. Relation to Population.—The sugar production of the Commonwealth during the past five seasons has averaged about 95 lbs. per head of population. In the same period in Queensland, the principal sugar-producing State, the production of sugar per head has ranged between 464 lbs. in 1915-16 and 1,017 lbs. in 1917-18. Details for the period 1915-16 to 1919-20 are as follows :—

SUGAR PRODUCTION PER HEAD OF POPULATION, 1915-16 TO 1919-20.

State.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.
	lbs.	lbs.	lbs.	lbs.	lbs.
New South Wales ..	23	19	24	14	12
Queensland ..	464	592	1,017	613	501
Commonwealth ..	73	89	149	90	74

7. Sugar Bounties.—The provision of bounties or similar aids to the sugar-growers of the Commonwealth early occupied the attention of the Commonwealth Parliament, the object in view being that of assisting the industry, and at the same time diminishing the employment of coloured labour in connexion therewith. An account of the various Acts in connexion with sugar bounties and sugar excise tariffs will be found on pages 394 to 396 of Year Book No. 6. In 1912 the Sugar Excise Repeal Act and the Sugar Bounty Abolition Act were passed by the Federal Parliament, conditionally on the Queensland Parliament approving of legislation prohibiting the employment of coloured labour in connection with the industry. The State Sugar Cultivation Act, the Sugar Growers Act, and the Sugar Growers' Employees Act, of 1913, having been approved of, the 1912 Federal Acts, which repeal all previous enactments in regard to excise on sugar and bounty on cane, came into force by proclamation in July, 1913.

8. Sugar Purchase by Commonwealth Government.—In June, 1915, the Commonwealth Government assumed control of the Australian sugar output, paying the growers a fixed price of £18 per ton of raw sugar, subsequently raised in 1917 to £21. The

Commonwealth Government disposed of the refined product at an average of £25 10s. per ton in 1915, the object then being to enable the consumer to purchase sugar of 1A grade at 3d. per lb. In January, 1916, however, the wholesale price was raised to £29 5s. per ton, and the retail price to 3½d. per lb. This arrangement was continued from year to year until June 26th, 1920, when an agreement was made with the Queensland Government for a period of three years, covering the seasons of 1920, 1921, and 1922, fixing the price of raw sugar for the first year at £30 6s. 8d. per ton, and making that price the minimum for each of the succeeding seasons, any increase being limited to the extra cost of production, due to higher wages paid to the sugar workers to meet the increased cost of living. In order to recoup the Commonwealth Government for the loss entailed in the purchase at very high prices of large quantities of foreign sugar, owing to the shortage of the Australian crop, the wholesale price of refined sugar was raised on March 25th, 1920, to £49 per ton, and the retail price to 6d. per lb.

9. Beet Sugar.—During the past few years an effort has been made to revive the sugar-beet industry in Victoria. The State Government is proceeding with a comprehensive irrigation scheme at Maffra, where the sugar-beet factory is situated. When completed, this scheme will make available for beet growing large areas of land hitherto unsuitable. The price of beet has risen to 35s. per ton with the prospect of a further increase. A fine grade of white sugar is manufactured, and considerable quantities of beet pulp and molasses are distributed for stock feed.

10. Acreage and Yield of Sugar Beet.—The following table shews the acreage under sugar beet, and the production in Victoria during the past five seasons :—

AREA AND PRODUCTION OF SUGAR BEET IN VICTORIA, 1915-16 TO 1919-20.

Particulars.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.
Area acres	461	1,320	1,200	1,009	1,090
Production tons	4,928	15,159	14,487	12,290	13,195
Average per acre "	10.69	11.48	12.07	12.18	12.11

11. Imports and Exports of Sugar.—The production of sugar in the Commonwealth during the past five years has not been sufficient to supply the growing requirements of Australian consumption. It has been found necessary to annually import on the average some 75,690 tons, valued at £1,839,835, the principal countries engaged in supplying this commodity being Java and Fiji. Particulars concerning the imports and exports of cane sugar for the past five years are as follows :—

IMPORTS AND EXPORTS OF CANE SUGAR, 1915-16 TO 1919-20.

Year.	Oversea Imports.		Oversea Exports.		Net Imports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

1919-20 ..	112,805	4,359,203	2,825	83,729	109,980	4,275,474

NOTE.—The minus sign (—) signifies net exports.

§ 14. Vineyards.

1. *Nature and Extent.*—The introduction of the vine into Australia has been set down by different investigators as at various dates, the years 1815 and 1828 being principally favoured. It would seem, however, that the vine was really brought out with the first fleet which initiated the colonisation of Australia in 1788, and that consequently the Australian vine is as old as Australian settlement. As already mentioned, a report of Governor Hunter's gives the area under vines in 1797 as 8 acres. From New South Wales the cultivation spread to Victoria and South Australia, and these States have now far outstripped the mother State in the area which they have devoted to its cultivation. In Queensland and Western Australia also, vine-growing has been carried on for many years, but in neither State has the industry progressed with the rapidity attained in Victoria and South Australia. In Tasmania the climate is not favourable to the growth of grapes. The purposes for which grapes are grown in Australia are three in number, viz.—(i) for wine-making, (ii) for table use, and (iii) for drying. The total area under vines in the several States from 1860 onwards is given in the following table:—

COMMONWEALTH VINEYARDS, 1860-1 TO 1919-20.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.		Acres.
1860-1	1,584	1,138	..	3,180	335	There are no vineyards in Tasmania.	6,237
1870-1	4,504	5,466	416	6,131	710		17,227
1880-1	4,800	4,980	739	4,337	659		15,515
1890-1	8,044	20,686	1,981	9,535	1,024		41,270
1900-1	8,441	30,634	2,019	20,158	3,325		64,577
1910-11	8,321	23,412	1,634	22,952	2,795		59,114
1915-16	7,883	22,353	1,373	27,764	2,751		62,124
1916-17	8,666	23,264	1,256	29,177	3,031		65,394
1917-18	8,594	25,236	1,274	29,762	2,996		67,862
1918-19	8,740	26,072	1,287	31,023	2,936		70,058
1919-20	8,923	27,441	1,203	32,784	2,975		73,326

The area devoted to vines in the Commonwealth amounted to 65,673 acres in 1904-5. From that year onwards a gradual decline set in, and at the end of 1914-15, ten years later, the acreage had decreased to 60,985. Since that date, however, as the result of satisfactory annual increases, the 1904-5 figure has been exceeded, and the 1919-20 total represents the maximum area planted with vines.

The wine-growing industry in Australia, more particularly in Victoria and New South Wales, received a severe check by various outbreaks of phylloxera. With a view to the eradication of this disease extensive uprooting of vineyards in the infested areas was undertaken, while further planting within such areas, except with phylloxera-resistant vines, was prohibited.

2. *Wine Production.*—The production of wine in Australia has not increased as rapidly as the suitability of soil and climate would appear to warrant. The cause of this is probably twofold, being in the first place due to the fact that the Australians are not a wine-drinking people and consequently do not provide a local market for the product, and in the second to the fact that the new and comparatively unknown wines of Australia find it difficult to establish a footing in the markets of the old world, owing to the competition of well-known brands. Active steps are being taken in various ways to bring the Australian wines under notice, and it may be confidently expected that when

their qualities are duly recognised the wine production of this country will exhibit a rapid development. Particulars concerning the quantity of wine produced in the several States during the past five seasons are contained in the table given hereunder :—

AUSTRALIAN WINE PRODUCTION, 1915-16 TO 1919-20.

Season.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Commonwealth.

3. Relation to Population.—In relation to population the areas of the vineyards of the several States exhibit an upward tendency during the last five years, the Commonwealth total increasing from 13 to 14 acres per 1,000 of the population during the same period. Details for the seasons 1915-16 to 1919-20 are furnished in the succeeding table :—

AREA OF VINEYARDS PER 1,000 OF POPULATION, 1915-16 TO 1919-20.

Season.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Commonwealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.

1918-19 ..	5	18	2	70	9	..	14
1919-20 ..	4	18	2	70	9	..	14

4. Imports and Exports.—The principal countries of origin of wine imported into Australia are France, Spain, Portugal, and Italy, the greater portion of the sparkling wines coming from France. Particulars relative to the importations of wine into the Commonwealth during the past five years are given hereunder :—

COMMONWEALTH IMPORTS OF WINE, 1915-16 TO 1919-20.

Year.	Quantity.			Value.		
	Sparkling.	Other.	Total.	Sparkling.	Other.	Total.
	Gallons.	Gallons.	Gallons.	£	£	£
1915-16 ..	29,744	62,357	89,101	55,573	27,494	83,067
1916-17 ..	18,659	47,741	66,400	39,212	26,497	65,709
1917-18 ..	9,274	31,808	41,082	20,569	20,635	41,204
1918-19 ..	7,551	30,464	38,015	16,226	21,121	37,347
1919-20 ..	34,383	57,211	91,594	118,164	50,112	168,276

The principal countries to which wine is exported from Australia are the United Kingdom and New Zealand, a small but fairly regular export trade being also carried on with India, Ceylon, Fiji, and the South Sea Islands. Details concerning the exports of wine from Australia during the past five years are given in the following table :—

COMMONWEALTH EXPORTS OF WINE, 1915-16 TO 1919-20.

Year.	Quantity.			Value.

5. Other Viticultural Products.—In addition to grapes for wine-making purposes, large quantities are grown in all the States for table use, while, particularly in Victoria and South Australia, the drying of raisins and currants is also carried on. The quantities of table grapes grown in the several States during the past five seasons are as follows :—

TABLE GRAPES, 1915-16 TO 1919-20.

Season.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Commonwealth.

1917-18 ..	164,699	4,791	3,957,863	114,510	3,793,164	109,719
1918-19 ..	28,818	927	3,111,055	95,523	3,082,237	94,596
1919-20 ..	42,169	2,201	8,839,839	359,561	8,797,670	357,360

CURRANTS.

1915-16 ..	1,218,947	17,728	1,168,557	25,316	— 50,390	7,588
1916-17 ..	2,416	54	6,525,426	165,006	6,523,010	164,962
1917-18 ..	201	5	4,934,822	134,654	4,934,621	134,649
1918-19 ..	19,909	505	3,470,803	100,326	3,450,894	99,821
1919-20 ..	2,877	120	7,947,811	246,382	7,944,934	246,262

NOTE.—The minus sign (—) signifies net imports.

The quantities of raisins and currants imported into Australia were generally greater than the exports for all years prior to 1912, when the increased production in Australia left a surplus available for export. During the last five years the value of the exports exceeded that of the imports by £1,590,668, the average annual excess for the quinquennium being £318,134.

§ 15. Orchards and Fruit Gardens.

1. Nature and Extent.—Fruit-growing has made rapid progress in the Commonwealth during recent years, the area devoted thereto having increased in the past ten years by no less than 93,097 acres. The States in which the increase is most marked are :—Victoria, 30,228 acres; New South Wales, 26,911 acres; Tasmania, 13,618 acres; and Queensland, 9,276 acres. During the same period the South Australian fruit-growing area increased by 8,857 acres, while that in Western Australia exhibited an increase of 4,206 acres. The increased areas in Tasmania and Western Australia are mainly due to extensive plantings of apple trees with a view to the possibilities of the London market for fresh fruit. The total area devoted to orchards and fruit gardens in the several States is given hereunder :—

COMMONWEALTH ORCHARDS AND FRUIT GARDENS, 1915-16 TO 1919-20.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N. Ter.	F. Ter.	C'wealth.

1918-19 ..	67,432	85,130	24,250	30,085	20,412	37,424	..	18	264,751
1919-20 ..	72,803	86,336	24,636	30,617	19,815	37,687	..	1	271,895

The varieties of fruit grown differ materially in various parts of the several States, and range from such fruits as the pineapple, paw-paw, mango, and guava of the tropics, to the strawberry, the raspberry, and the currant of the colder parts of the temperate zone. The principal varieties grown in Victoria are the apple, pear, peach, apricot, and plum. In New South Wales, citrus fruits (orange, lemon, &c.), occupy the leading position, although peaches, bananas, apples, and plums are also extensively grown. In Queensland the banana, the pineapple, the orange, the apple, the peach, and the mango are the varieties most largely grown. In South Australia, in addition to the apple, orange, apricot, peach, and plum, the almond and the olive are also largely grown. In Western Australia, the apple, orange, peach, pear, plum, fig, and apricot are the sorts chiefly grown, while in Tasmania, although the apple represents over four-fifths of the area in that State devoted to fruit-growing, small fruits, such as the currant, raspberry, and gooseberry, are very extensively grown, and the balance of the area is mainly occupied with the pear, plum, apricot, peach, and cherry. The following table gives the acreage under the principal kinds of fruit grown, and the quantity and value of fruit produced. The acreages shewn are exclusive of young trees not yet bearing. The acreages for each kind of fruit in Victoria are not available :—

PARTICULARS OF THE PRINCIPAL KINDS OF FRUIT GROWN IN THE SEVERAL STATES OF THE COMMONWEALTH DURING THE SEASON 1919-20.

2. Relation to Population.—The acreage of orchards and fruit gardens of the Commonwealth in relation to population has increased during the last eighteen years to an extent which more than compensates for the decline experienced in the case of

vineyards. Taking the two in conjunction, the relative area under vineyards and orchards has, during the period, considerably increased, averaging 55 acres per 1,000 of population in 1901-2, and 66 in 1919-20. Details for orchards and fruit gardens for the years 1915-16 to 1919-20 are as follows :—

**AREA OF ORCHARDS AND FRUIT GARDENS PER 1,000 OF POPULATION,
1915-16 TO 1919-20.**

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N. Ter.	F. Ter.	C'wealth.

1919-20..	36	58	34	65	60	174	..	0.5	52

3. **Commonwealth Imports and Exports.**—A considerable fruit trade, both import and export, is carried on by the Commonwealth with overseas countries, the major portion of the importations consisting of fresh fruits, while dried fruits, principally raisins and currants, bulk largely in the exports. The principal fresh fruits imported during the past five years were bananas, apples, oranges, and lemons, the bananas coming from Fiji, while the apples and citrus fruits were supplied by the United States. The fresh fruits exported during the same period consisted largely of apples consigned to the United Kingdom, and citrus fruits to New Zealand. Many varieties of dried fruits were imported into the Commonwealth since 1915-16, but the bulk of those exported consisted of currants and raisins, which were shipped mainly to the United Kingdom, New Zealand, and Canada.

Particulars concerning the overseas imports and exports of dried fruits for the last five years are as follows :—

**COMMONWEALTH OVERSEA IMPORTS AND EXPORTS OF DRIED FRUITS, (a)
1915-16 TO 1919-20.**

NOTE.—The minus sign (—) signifies net imports.

4. **Jams and Jellies.**—A considerable oversea trade in jams and jellies is now carried on by the Commonwealth, the value of the imports for the year 1919-20 amounting to £9,913, and of the exports to £1,218,997. The destinations of the exports were principally the United Kingdom, Egypt, United States of America, France, and South African Union. Particulars relative to imports and exports during each of the last five years are as follows:—

**COMMONWEALTH OVERSEA TRADE IN JAMS AND JELLIES,
1915-16 TO 1919-20.**

Year.	Oversea Imports.		Oversea Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

5. **Preserved Fruit.**—Details concerning the quantities and values of preserved fruit imported into and exported from the Commonwealth cannot readily be obtained, owing to the fact that in the Customs returns particulars concerning fruit and vegetables are in certain cases combined. The total value of fruit and vegetables, other than fresh fruits, dried fruits, potatoes, and onions, imported into Australia during 1919-20 was £72,877, and the corresponding value of exports was £564,799.

§ 16. Minor Crops.

1. **Nature and Extent.**—In addition to the leading crops which in the foregoing pages have been dealt with in some detail, there are many others which, owing either to their nature, or to the fact that their cultivation has advanced but little beyond the experimental stage, do not occupy so prominent a position. Some of the more important of these are included under the headings—Market Gardens, Pumpkins and Melons, Nurseries, Grass Seed, Tobacco, Flax, Hops, and Millet. Cotton-growing has in recent years received some attention in the tropical portions of the Commonwealth, although the industry cannot yet be said to be beyond the experimental stage. The total area in the Commonwealth during the season 1919-20 devoted to crops not dealt with in previous sections was 71,918 acres, of which market gardens accounted for 28,416 acres, or nearly 40 per cent.

2. **Market Gardens.**—Under this head are included all areas on which mixed vegetables are grown. Where considerable areas are devoted to the production of one vegetable, such for instance as the potato, the onion, the melon, the tomato, etc., the

figures are usually not included with market gardens, but are shewn either under some specific head, or under some general head as "Other Root Crops," or "All Other Crops." The area under market gardens in the several States of the Commonwealth during each of the last five seasons is given in the table hereunder :—

COMMONWEALTH MARKET GARDENS, 1915-16 TO 1919-20.

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N. Ter.	F. Ter.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1915-16 ..	10,940	11,379	2,330	1,712	2,787	435	..	27	29,610
1916-17 ..	10,683	10,746	2,305	1,522	2,153	448	..	27	27,884
1917-18 ..	10,100	11,362	1,991	1,502	2,334	447	..	39	27,775
1918-19 ..	10,004	11,594	1,814	1,405	2,237	389	..	39	27,482
1919-20 ..	9,872	12,633	1,752	1,343	2,410	367	..	39	28,416

The area of market gardens has declined in all the States, with the exception of Victoria, during the past five years, the total area for the Commonwealth decreasing by 1,194 acres since 1915-16.

3. *Grass Seed*.—The total area under this crop during 1919-20, exclusive of New South Wales, for which State no figures as to area are available, was 6,765 acres, of which 1,235 acres were in Victoria, 3,131 acres in Queensland, and 2,360 acres in Tasmania. The total yield for 1919-20, including New South Wales, was 65,344 bushels, valued at £34,896.

4. *Tobacco*.—Tobacco-growing is an industry which has experienced marked fluctuations, although at one time it promised to occupy an important place amongst the agricultural industries of the Commonwealth. Thus, as early as the season 1888-9 the area under this crop amounted to as much as 6,641 acres, of which 4,833 were in New South Wales, 1,685 in Victoria, and 123 in Queensland. This promise of importance was, however, not fulfilled, and after numerous fluctuations, in the course of which the Victorian area rose in 1895 to over 2,000 acres, and that in Queensland to over 1,000 acres, the total area for the season 1919-20 had declined to 2,331 acres, distributed as follows :—New South Wales, 1,604 acres ; Victoria, 406 acres ; and Queensland, 321 acres. This decline in production appears to have been due to the comparatively small demand which existed in Australia for the locally-produced leaf, and to the fact that the cost of production and preparation in the Commonwealth prevented the Australian leaf from obtaining a footing in outside markets. Possibly under more favourable circumstances, and with greater attention given to the production of leaf of the best quality only, the industry may eventually assume considerable proportions. In all the States in which its cultivation has been tried, the soil and climate appear to be very suitable for the growth of the plant, and the enormous importations of tobacco in its various forms into the Commonwealth furnish an indication of the extensive local market which exists for an article grown and prepared in such a manner as to meet the requirements of consumers. The value of the net importations of tobacco into the Commonwealth during the year 1919-20 amounted to £2,330,452, comprising unmanufactured tobacco £2,441,179, cigars £94,933, cigarettes £62,137, and snuff £1,635, while manufactured tobacco shewed a balance in favour of exports amounting to £269,432.

5. *Pumpkins and Melons*.—The total area under this crop in the Commonwealth during 1919-20 was 17,031 acres, of which 3,436 acres were in New South Wales, 1,089 acres in Victoria, 11,743 acres in Queensland, 413 acres in Western Australia, and 250 in South Australia. The production for the Commonwealth amounted to 51,520 tons.

6. *Hops*.—Hop-growing in the Commonwealth is practically confined to Tasmania and some of the cooler districts of Victoria, the total area for the season 1919-20 being 1,384 acres, of which 1,312 acres were in Tasmania, and 72 acres in Victoria. The Tasmanian area, though still small, has increased considerably during the past eighteen years, the total for the season 1901-2 being only 599 acres. On the other hand, the Victorian area, which in 1901-2 was 307 acres, had diminished to 72 acres in 1919-20. The cultivation of hops was much more extensive in Victoria some forty years ago than at present, the area devoted to this crop in 1883-4 being no less than 1,758 acres. During the year 1919-20 the imports of hops exceeded the exports by 253,240 lbs., the excess value being £17,347.

7. *Flax*.—For the past twenty years flax has been grown intermittently in the Gippsland district of Victoria, and attempts have also been made to introduce its cultivation into Tasmania and New South Wales, but without success. The chief reason for this failure was the dominant position held by Russia in the European fibre markets. That country produced 80 per cent. of the world's output of fibre, and the low standard of wages resulted in a correspondingly low price for fibre. Consequently the price the Australian farmer received for his flax rendered its cultivation unattractive compared with that of other agricultural products. In 1907, the Commonwealth Government, with a view to foster the industry, provided for the payment of a bounty of 10 per cent. of the market value of all flax products, but the low returns for fibre, about £45 per ton, prevented the extension of flax growing to any appreciable degree, and on 1st July, 1917, the bounty provisions expired. At the end of that year, however, the shortage of flax fibre in Europe had become very acute owing to the occupation of the Baltic Provinces by Germany, and at the suggestion of the Advisory Council of Science and Industry, and with a view primarily to assisting the Imperial Government, the Commonwealth Government formulated a scheme to encourage the cultivation of flax. A Flax Industry Committee, consisting of representatives of the Department of Agriculture of Victoria, the flax growers, and the cordage manufacturers, was appointed with executive powers under War Precautions Regulations. At the same time, a guarantee was given by the Commonwealth Government of £5 per ton for flax of specified standard grown in 1918.

The area was increased from 400 acres in 1917 to 1,420 acres in 1918. The contract under which the Imperial Government agreed to purchase the fibre from the 1918 flax crop was cancelled, and the fibre was sold on the open market. The actual value f.o.b. Melbourne of the products from this crop was as follows:—Fibre, £15,000; linseed, £7,500; and tow, £1,900, or a total of £24,400. In addition to the guaranteed price of £5 per ton, the growers of this crop received dividends to the amount of £4 per ton. Owing to the disorganization of Russian industries, and the depletion of the world's stocks of linens, there is every indication that the present high values of flax products will be retained for many years. A further guarantee was given by the Commonwealth Government of £6 per ton for the 1919 flax crop. Although about 2,200 acres were planted in 1919 under the £6 guarantee, the product of 1,611 acres only was delivered to the mills. As a result of the unfavourable season, the yield from this 1,611 acres was small, amounting to 1,625 tons. Owing to the present unsettled state of the fibre market, it is difficult to estimate the value of the fibre and tow from the 1919 flax crop, but the following figures have been calculated on a conservative basis:—Fibre, £6,000; linseed, £9,800; and tow, £1,500, making a total of £17,300. In order to encourage farmers to take advantage of this unprecedented opportunity of firmly establishing the flax industry, the Commonwealth Government has guaranteed a price for the flax grown in Australia during the next three years. With a three years' guarantee of remunerative prices, there is every incentive to farmers in suitable districts not only to grow flax, but to co-operate in the erection of flax-mills for the treatment of the flax straw. The guarantee for 1920 and 1921 is £6 per ton, and for 1922 £5 per ton for raw flax. The total area sown to flax in 1920 was approximately 1,500 acres, but only the product of approximately 1,100 acres, representing 1,507 tons of crop, were delivered to the various flax mills. Australia imports annually flax products to the value of £1,800,000, and as it has been demonstrated that flax can be grown to perfection in many parts of the Commonwealth, it would appear that there is a good prospect of successfully establishing a local industry. There are five mills operating in Gippsland, and the erection of additional mills is anticipated. The whole of the commercial flax crop is grown in Victoria, but a grant of £1,000 has been made by the Commonwealth Government for experimental work, and in all the States experiments are being carried out to determine the suitability of the soil and climate for the cultivation of this crop. Experiments have also been carried out with a view to improve the methods of treatment at the mills.

8. *Millet*.—Millet appears in the statistical records of four of the Commonwealth Divisions. The total area devoted thereto in 1919–20 was 6,864 acres, of which 4,220 acres were in New South Wales, 1,850 in Victoria, 769 in Queensland, and 25 in the Northern Territory. The particulars here given relate to millet grown for grain and fibre. That grown for green forage is dealt with in the section relating thereto.

9. *Nurseries*.—In all the States somewhat extensive areas are devoted to nurseries for raising plants, trees, etc. Statistics concerning the area so occupied for flowers, fruit trees, etc., are available for New South Wales, Victoria, South Australia, and Western

Australia. During 1919-20 the areas in those States were 569, 756, 146, and 122 acres respectively. Statistics so far as they relate to forestry are given elsewhere.

10. **Cotton.**—Cotton-growing on a small scale has been tried in Queensland, but so far without very marked success. In 1902, 8 acres were devoted to this crop, in 1907, 300 acres were under cultivation, and in 1911 the maximum either in regard to area or production was reached, an area of 605 acres producing 186,894 lbs. of unginned cotton. A gradual falling-off has since been experienced, and in 1919-20 the area was only 72 acres with a production of 27,470 lbs. of cotton. Special efforts have recently been made to encourage cotton-growing in Queensland, and hopes are entertained that with the invention of a mechanical device for the picking of the cotton the industry will become firmly established, since the soil and conditions appear eminently suitable for the growth of this crop. Small areas in the Northern Territory have also been planted with cotton. The tropical portions of Western Australia have also long been regarded as suitable for its cultivation.

11. **Coffee.**—Queensland is the only State of the Commonwealth in which coffee-growing has been at all extensively tried, and here the results have up to the present time been far from satisfactory. The total area devoted to this crop reached its highest point in the season 1901-2, when an area of 547 acres was recorded. The area then continuously declined to 1906-7, when it was as low as 256 acres. In subsequent seasons the area fluctuated somewhat, but on the whole with a downward tendency, and in 1919-20 only 24 productive acres were recorded, with a yield of 16,101 lbs.

12. **Other Crops.**—Miscellaneous small crops are grown in the several States, amongst which may be mentioned tomatoes, rhubarb, artichokes, arrowroot, chicory, and flowers.

§ 17. Bounties on Agricultural Products.

1. **General.**—The Bounties Act of 1907, passed by the Federal Parliament in order to encourage the manufacture and production of certain articles in the Commonwealth, included among the items on which bonuses were payable several agricultural products. Under an Act passed in 1912 the provisions of the 1907 Act in respect of certain items were renewed. During 1918 an Apple Bounty Act was passed, which provided for the payment of a bounty on the export of apples grown and evaporated in Australia and sold to the Imperial Government for delivery between 1st April and 31st August, 1918. Products of the soil on which these bounties were payable are as follows:—

BOUNTIES ON AGRICULTURAL PRODUCTS.

Article.	Period dating from 1st July, 1907, during or in respect of which Bounty may be paid.	Rates of Bounty.	Maximum amounts which may be assigned in any one year.
Cotton, ginned	8 years	10 % on market value	£ 6,000
Fibres—			
New Zealand flax	10 "	10 " "	3,000
Flax and hemp	10 "	10 " "	8,000
Jute	10 "	20 " "	9,000
Sisal hemp	10 "	10 " "	3,000
Oil materials supplied to an oil factory for the manufacture of oil—			
Cotton seed	8 "	10 " "	1,000
Linseed (flax seed)	10 "	10 " "	5,000
Rice, uncleaned	10 "	20s. per ton	1,000
Coffee, raw, as prescribed	8 "	1d. per lb.	1,500
Tobacco leaf for the manufacture of cigars, high grade, of a quality to be prescribed	10 "	2d. "	4,000
Fruits—			
Dates (dried) (a)	15 "	1d. "	1,000
Dried (except currants and raisins) or candied, and exported	10 "	10% on market value	6,000
Evaporated apples	3½d. per lb.	12,000

(a) Any unexpended amount assigned in any year to be available for the years following.

At the present time the only one of these bounties still in force is that relating to dates.

2. **Bounties Paid.**—Although the rate of bonus on the several articles was fairly liberal, the bounties were not availed of to any great extent, as will be seen from the following table, which gives particulars as to the quantity of the articles raised and the amounts paid as bounties in respect thereto for the five financial years ended 1919-20:—

PARTICULARS OF BOUNTIES PAID ON AGRICULTURAL PRODUCTS (OTHER THAN SUGAR), 1915-16 TO 1919-20.

§ 18. Fertilizers.

1. **General.**—In the early days of settlement and cultivation in the Commonwealth, scientific cultivation was in a comparatively undeveloped state. The early farmers were neither under the necessity, nor in fact aware of the necessity, of supplying the constituents to the soil demanded by each class of crop. The widely divergent character of the soils in the Commonwealth, their degeneration by repeated cropping, the limitations of climatic conditions, the difficulties of following any desired order of rotation of crops, all rendered it essential to give attention to artificial manuring. The introduction of the modern seed-drill, acting also as a fertilizer distributor, has greatly facilitated the use of artificial manures, and much land formerly regarded as useless for cultivation has now been made productive. There is reason to believe that this feature will be even more strikingly characteristic of the future.

2. **Fertilizers Acts.**—In order to protect the interests of users of artificial manures legislation has been passed in each of the States, regulating the sale and preventing the adulteration of fertilizers. A list of these Acts and their main features will be found in Year Book No. 12 (page 378).

3. **Imports.**—The local production of artificial manures has assumed large proportions during the last few years, though considerable quantities are still imported. The importation of fertilizers has increased over 100 per cent. since 1901. The chief items, as regards both quantity and value, are those relating to phosphates, a fertilizer which has proved itself to be very suitable for the growing of cereals in Australian soils. During 1919-20 the values of rock phosphates imported represented nearly 60 per cent. of the total importation of fertilizers. Pleasant Island, with 41 per cent., was the largest contributor, Christmas Island coming next with 31½ per cent., while the bulk of the remainder was supplied by the colony of Gilbert and Ellice Islands. The whole of the soda nitrate came from Chile.

The imports of artificial manures during the last five years are given in the following table. It will be noticed that the values of rock phosphates imported have been consistently large, representing over 79 per cent. of the total importation of fertilizers during the period. No importations of manufactured superphosphates were made during 1917-18, 1918-19, and 1919-20, though considerable quantities were imported during 1914-15.

COMMONWEALTH IMPORTS OF FERTILIZERS, 1915-16 TO 1919-20.

4. Exports.—The subjoined table shows the exports of artificial manures for the years 1915-16 to 1919-20. Practically the whole of these fertilizers are manufactured locally, and are shipped mainly to New Zealand, Japan, Java, and the Pacific Islands :—

1915-16	2,189,456	2,117,166	96.70	53,257	70,523
1916-17	2,004,944	1,903,026	94.92	49,216	70,326
1917-18	1,679,772	1,586,748	94.46	49,578	58,989
1918-19	1,605,088	1,547,144	96.39	49,900	57,276
1919-20	1,628,163	1,561,957	95.93	54,487	58,153

Statistics relating to the use of manures in Tasmania for the past five seasons are as follows :—

FERTILIZERS USED IN TASMANIA, 1915-16 TO 1919-20.

Season.	Total Area of Crops.	Area Manured.		Manure Used.	
		Aggregate.	Percentage on Total Area of Crops	Natural (Stable-yard, etc.).	Artificial.
	Acres.	Acres.	%	Tons.	Tons.
1915-16	333,334	182,374	54.71	30,486	15,232
1916-17	270,526	144,532	53.43	30,990	13,886
1917-18	238,199	120,476	50.58	28,006	11,472
1918-19	254,109	135,558	53.35	25,032	11,367
1919-20	270,955	153,606	56.69	21,604	12,588

6. Local Production of Fertilizers.—Statistics relative to the local production of fertilizers are incomplete, and detailed returns for fertilizer factories other than bone mills are not available. The number of firms engaged in the manufacture of artificial manures in the Commonwealth at latest available date was 94, made up as follows :—New South Wales, 21; Victoria, 29; Queensland, 22; South Australia, 10; Western Australia, 4; and Tasmania, 8.

7. Benefits Derived from the Use of Fertilizers.—There is little doubt that the increasing use throughout the Commonwealth of fertilizers, natural and artificial, combined with the greater attention being devoted to fallowing and to the combination of sheep-farming with agriculture, is having the effect of improving the prospects of those dependent for a livelihood on the products of the soil. Reference has previously been made to the loss to the soil of phosphoric acid which the Commonwealth export of wheat and its milled products involves, and the necessity which thus arises for returning this ingredient in some form. Similarly, other staple products exported impose their respective tolls upon the soil, and the increased use of fertilizers furnishes evidence that producers are alive to the necessity for making good the deficiency so arising.

§ 19. Ensilage.

1. Value to Stockowners.—The use of ensilage as a substitute for green fodder during periods of drought or spells of dry weather, or for winter use, is less extensive in Australia than the circumstances would appear to warrant. There is, however, a growing disposition on the part of dairy farmers to make silos on their holdings, as they find that

dairy cattle eat ensilage greedily, and that by its means the output of milk, both in regard to quantity and quality, may be kept up long after the supply of ordinary green food is exhausted. Sheepbreeders are also recognising the fact that during protracted periods of dry weather the silo enables them to keep their stock in good condition, and that lambing can take place satisfactorily. Ensilage thus obviates the expense of travelling or trucking sheep for hundreds of miles to get beyond the drought area, or the equally costly and even ruinous alternative of providing chaff for food at high prices and costly freight. In the rearing of lambs for the London market, ensilage appears to be destined to play an important part, as the lambs thrive upon it much better than upon dry food. By the judicious economising of the surplus growth of green food with the use of the silo, farmers and squatters can carry more stock on their holdings than they otherwise would be justified in doing. Not only is the great waste of superabundant food thus avoided, but it becomes possible to change into a succulent and nutritious food much growth that in any other state would not be eaten by stock. Thus such vegetation as marsh mallows, thistles, weeds of all sorts, and even the swamp reed (*Arundo phragmites*), which grows in great quantities in lagoons, billabongs, and swamps, are all eaten with avidity when offered to stock in the form of ensilage. The pit and stack silos are rapidly being superseded by those built of red gum and hardwood or concrete. This is found to a great extent to obviate the loss sustained by mould, at the same time reducing the risk of fire. A portable silo made of iron has been devised in sections of such size and weight as to admit of ready handling. These silos can be increased in diameter or height by the addition of further sections.

2. Government Assistance in the Production of Ensilage.—The Government of Victoria, recognising that defective methods of making ensilage have often been adopted, has for some years been making special efforts to educate the farming community, by the issue of bulletins, lectures, etc., so that mistakes may be avoided, and the conditions essential for the production of good ensilage may be better appreciated. These conditions vary with the climate and with the locality. The Government also undertakes the erection of different types of silos on very liberal terms, repayment extending over a series of years. Experts erect the silos and give practical lessons as to packing them, etc. The New South Wales Government has, by giving advice in the "Agricultural Gazette," and by the issue of special bulletins, taken steps towards the education of the farmers. Silos also have been erected on the various experimental farms with a view to demonstrating the value of ensilage. No financial assistance is, however, given in New South Wales in this connexion.

3. Quantity Made.—Particulars concerning the number of silos and the quantity of ensilage made in the several States of the Commonwealth in the seasons 1915-16 to 1919-20 are furnished in the following table :—

ENSILAGE MADE IN COMMONWEALTH, 1915-16 TO 1919-20.

State or Territory.	1915-16.		1916-17.		1917-18.		1918-19.		1919-20.

(a) No. of holdings on which ensilage was made.

Following the drought of 1902-3 greater attention was paid to ensilage than was previously the case, and during the four seasons ended 1909-10 a continuous and fairly rapid increase was in evidence in all the States, both in the number of holdings on which ensilage was made and in the quantity produced. The following five seasons, however, shewed a falling-off, but the reduction cannot be accepted as an indication of a lessening of appreciation of the benefits of ensilage, but rather of the fact that stocks had not been drawn upon to any great extent during the previous seasons. The accumulated stocks proved of very great value during the 1914 drought, though far below what would have been the case if more attention had been paid to ensilage-making during the previous years of surplus green food. A very substantial increase took place in 1915-16, both in the holdings on which ensilage was made and in the quantity produced, but during the last four years the number of holdings and the quantity of ensilage made declined considerably, the falling off in Victoria being particularly heavy.

§ 20. Agricultural Colleges and Experimental Farms.

1. **Introduction.**—In most of the States, agricultural colleges and experimental farms have been established with a view to promoting agriculture and to establishing improved and more scientific systems of stock-breeding and dairying. In these colleges, and on some of the farms, provision is made for the accommodation of pupils, to whom both practical and theoretical instruction is given by experts in various branches of agriculture. Analyses of soils and fertilizers are made, manures are tested, and elementary veterinary science, etc., is taught, while general experimental work is carried on with cereal and other crops, not merely for the purpose of shewing that it is practicable to produce certain crops in a given place, but also to shew how it is possible to make farming pay best in that locality. Opportunities are afforded for practice in general agricultural work, and instruction is given in the conservation of fodder; in cheese and butter making; in the management, breeding, and preparation for the market of live stock; in the eradication of pests and weeds; and in carpenters', blacksmiths', and other trades.

Travelling expert lecturers are sent to the various agricultural and dairying centres, and there is a wide distribution of periodical agricultural gazettes and bulletins on matters of importance at special seasons.

2. **Particulars of Agricultural Colleges and Experimental Farms.**—In previous issues detailed information is given in respect of agricultural colleges, experimental farms and agricultural education generally. See Year Book No. 11, pp. 393-5.

§ 21. Government Loans to Farmers.

1. **Introduction.**—All the Australian States have established systems under which financial aid is rendered to agriculturists by the Government. The principle upon which such aid is founded was probably first practically applied in Germany, in the year 1770, when the *Landschaften Bank* was created. The establishment of the *Crédit Foncier* nearly a century later in France was a creation of a similar character. This latter institution was designed to enable house and land owners to raise money on mortgage at a low rate of interest, with facility for repayment by annual instalments including redemption of the capital. It dates from 1852, but the mortgage bank known as the *Caisse Hypothécaire*, which, after a struggling existence, was finally liquidated in 1864, was based essentially on the same principle. Over the operations of the *Crédit Foncier*, created under governmental patronage and invested with such special privileges as to virtually constitute it a monopoly, the Government exercised a direct control, by appointing its governor and its two deputy-governors. The *Crédit Foncier* was empowered to lend money only on a first mortgage, and to the amount of one-half of the estimated value of houses and farms, and one-third that of vineyards, woods, and other plantations, and the commission charged could not exceed six-tenths per cent. The system developed and adopted in the Commonwealth, with the object of assisting farmers to make improvements or to develop or utilise the agricultural or pastoral resources of the land, is analogous. Particulars of advances made under the Closer Settlement and similar Acts are dealt with in the section on Closer Settlement.

2. Aggregate of Transactions in each State, 1917 to 1920.—The subjoined table gives aggregates of transactions in reference to advances to farmers in each State during the past four years :—

STATE GOVERNMENT ADVANCES DEPARTMENTS—AGGREGATE OF LOANS TO FARMERS, 1917 TO 1920. (a)

(a) Compiled from figures furnished by the Government Savings Bank of Victoria. (b) Includes loans to farmers and other producers and to local bodies on the security of their own rates. (c) Including profits in connexion with house and similar loans. (d) Not shown since amalgamation with Government Savings Bank. (e) See note (d). (f) Not available. (g) Exclusive of Western Australia.

3. Legislation in each State.—An account of the initial legislation in each State in reference to advances to settlers; subsequent legislation; security on which, and objects for which advances were made; amount of advances and repayments up to the end of 1917–18, etc., will be found in previous issues of the Year Book (see No. 12, pages 384 to 389).

4. Particulars Respecting Agricultural and Stock Departments.—A synopsis of the activities and operations of the Agricultural and Stock Departments of the several States of the Commonwealth as on 30th June, 1920, will be found in the appendix to this volume. The main features of organisation are set out under their respective headings, and will be found to embrace such items as the number on staffs, expenditure, facilities for agricultural education and work undertaken in agricultural colleges, technical schools, experimental farms, and orchards and vineyards. The nature of lectures and other forms of agricultural instruction by experts is dealt with, as well as the extent of distribution of plants, and the special steps taken by the departments to disseminate information amongst agriculturists, and also to facilitate placing the products of the State on the market.

§ 22. Graphical Representation of Crops.

1. Areas of Principal Crops.—A graphical representation of the areas devoted to each of the principal crops in the Commonwealth since 1860 will be found on page 275. The crops so represented are as follows :—Wheat, hay, oats, maize, sugar-cane, barley, and vines.

2. Production.—On page 276 will be found a graphical representation of the aggregate yields in the Commonwealth since 1860 of wheat, oats, barley, maize, and hay.
