Reverse design

The Australian Coat-of-Arms, which is supported by the kangaroo and the emu. The kangaroo is Australia's biggest marsupial, and one or other of the species are found in every part of the Continent: the doe, which can be four or five feet tall, gives birth to a "joey" which is only an inch or so long, and which completes its development in its mother's pouch. The emu is the second largest bird in the world—only the ostrich is bigger: before pushed back by settlement, the emu ranged all over Australia; the male bird incubates the eggs and takes care of the chickens when they hatch.

The platypus is one of the only two egg-laying mammals (the other is the echidna) and is found in the rivers and creeks of the Eastern side of the Continent; it is about the same size as the echidna and has webbed feet and rich short fur; it swims with the skill and dash of a seal.

The lyrebird on the 10-cent is the male of the species as it appears when dancing and singing, with its magnificent tail expanded and thrown forward over its head: it is a famous mimic; it is about the size of a pheasant, and inhabits dense damp forests from Southern Queensland to Victoria.

The echidna or spiny ant-eater is Australia's other egg-layer which suckles its young; like the hedgehog, it depends on its spines for protection and rolls up into a tight ball when frightened; it is about 18 inches long and thrives in every part of Australia. A related species is found in New Guinea.

The frilled lizard is found only in the tropical north of Australia; it grows to about three feet in length—most of it tail; it is harmless but when cornered it presents a gaping hissing mouth in the middle of its brightly-coloured neck frill.

The feather-tail glider is the smallest of our gliding marsupials and glides by means of membranes along its sides: it is strictly nocturnal and is quite common in the forests of Eastern Australia: one of its bush nicknames—the "flying mouse"—gives an idea of its size.

The twenty-cent, ten-cent and five-cent coins will have the same weight and almost exactly the same diameter as the present florin, shilling and sixpence. The fifty-cent coin will be slightly larger than a penny (which has a diameter of 1.215 inches and a weight of 145.8 grains). The two-cent coin will have a diameter midway between those of the shilling (ten-cents) and sixpence (five-cents) and the one-cent coin a diameter between those of the sixpence and the threepence (which has a diameter of 0.635 inches and a weight of 21.8 grains).

(Note: The photograph above depicting the obverse design is an enlargement to 50-cent size of a photograph of an actual one-cent coin. The photographs of the reverse designs are at actual coin size and were taken from plaster models prepared by the designer.)

§ 5. Basic Wages in Australia

National Wage Cases of 1965, p. 458.—Hearing in these cases commenced on 2nd March, 1965, before Kirby C.J., Gallagher, Moore, Sweeney and Nimmo JJ., of the Commonwealth Conciliation and Arbitration Commission. Claims by the employers and the trade unions were heard concurrently.

The employers' claim (Part A) was for the abolition of the concepts of the basic wage and margins, and the introduction into the Metal Trades Award of an obligation to pay a total wage made up of the sum of the amounts expressed in terms of the basic wage and a margin, plus an amount equivalent to one per cent. of such sum. The employers also asked (Part B) that, in respect of the ensuing twelve months, the level of the basic wage and the level of margins, in so far as the latter is determined upon general economic grounds, should be decided simultaneously. It was open to the Commission under Part B of these claims to decide whether there should be an increase in (a) the basic wage element alone; (b) the marginal element alone; or (c) both the basic wage and marginal elements, to whatever extent, in respect of each element, the Commission deemed proper.

The trade unions sought new basic wage rates incorporating increases proportionate to the rises in the Consumer Price Index. For the Six Capital Cities basic wage the increase claimed was 12s, a week for adult males.

The Commission announced its decision on 29th June, 1965, when three separate judgments were handed down—a joint judgment by Gallagher, Sweeney and Nimmo JJ. and separate judgments by Kirby C.J. and by Moore J. In accordance with the opinion of the majority (namely, that of Gallagher, Sweeney and Nimmo JJ.), the order of the Commission was to the effect:

- (a) Part A of the employers' application was refused;
- (b) With regard to Part B of the employers' application-
 - (i) there would be no alteration in the basic wage,
 - (ii) with effect from the first pay period commencing on or after 1st July, 1965, each margin in Clause 4 of the Metal Trades Award was increased by an amount equal to 1½ per cent. of the sum of the Six Capital Cities basic wage and that margin;
- (c) the application of the unions for an increase in the basic wage was refused.

The majority judgment anticipated that, subject to the question of capacity of a particular industry and the question of those margins which had already been increased on general economic grounds (since 1963), the increases awarded would be speedily reflected throughout the awards of the Commission.

A summary of the proceedings and of the reasons for the judgments will be contained in the next issue of the Year Book.

Rates shown are those adopted by most Wages Boards. (c) Wages Boards adopted the Commonwealth rate. (d) The "living wage" declared for the metropolitan area is also adopted for country areas, except at Whyalla and nearby areas, where a loading of 5s. for adult males is generally payable. (e) Differential rates abolished as from 22nd September, 1964.

The Commonwealth basic wage rates for September, 1965, were still the same as those operative from 19th June, 1964 (see p. 459).

⁽a) Represents the combined transactions of the Consolidated Revenue Fund and the Business Undertakings—Railways, Tramways and Omnibuses and Sydney Harbour Section of the Maritime Services Board—included in the annual Budget Papers. Adjustments have been made to exclude duplications, (b) To avoid duplication in aggregating particulars for the Commonwealth and States, the grand totals have been adjusted to exclude State payments to the Commonwealth in respect of pay-roll tax and Commonwealth payments to the States included in State Consolidated Revenue Funds in respect of interest on State debts, special grants, financial assistance grants, special financial assistance, grants to universities, tuberculosis, capital expenditure and National Welfare payments. There are other relatively minor payments for which adjustments have not been made and the adjusted figures are therefore still slightly overstated.

DECIMAL CURRENCY CONVERSION TABLES

As from 14th February, 1966, under the Currency Act 1965, a dollar/cent currency system, with one dollar equal to 100 cents, will operate in Australia (see pp. 809-11). To facilitate conversion of figures expressed in £ s. d. in this Year Book into dollars and cents, and for general use, conversion tables issued by the Decimal Currency Board are reproduced hereunder.

The Exact Equivalents Table shows the relationships between pounds, shillings and pence, and dollars and cents as prescribed in the Currency Act 1965, namely:—

1 pound = 2 dollars 1 shilling = 10 cents 1 penny = $\frac{5}{8}$ ths of a cent

This table should be used where it is necessary to obtain exact equivalents in decimal currency of amounts expressed in \pounds s. d. For example, where rates or unit prices are expressed in \pounds s. d. in agreements between contracting parties, this table may be used to convert them to their exact equivalents in decimal currency.

The Banking and Accounting Table converts \mathbf{f} s. d. amounts expressed in whole pence to decimal currency amounts expressed in whole cents. To convert an amount of \mathbf{f} s. d. to dollars and cents—multiply the pounds by two—to give dollars. Add the equivalent of the shillings and pence.

COMPREHENSIVE CONVERSION TABLE CONVERSION OF AMOUNTS OF £ s. d. INTO DECIMAL CURRENCY TO NEAREST WHOLE CENT

Note.—The Comprehensive Conversion Table is in no sense designed to give official direction as to how prices expressed in £ s. d. should be converted into dollars and cents after the changeover to decimal currency. The Decimal Currency Board has no authority to fix prices or other charges and the Comprehensive Conversion Table merely shows the nearest whole cent equivalent of various £ s. d. amounts expressed to the nearest halfpenny. The only exceptions are threepence and ninepence where the cent equivalent is shown as half a cent below the exact value in the case of the threepence and half a cent higher in the case of the ninepence. Because the Comprehensive Conversion Table in most cases gives approximations only, it is not suitable for converting unit rates or prices. It should be used only for converting the final balance of an account or the amount due for payment by a debtor.

LIST OF SPECIAL ARTICLES AND MISCELLANEOUS MATTER CONTAINED IN PREVIOUS ISSUES

This list refers to special articles and other more or less important miscellaneous matter which have appeared in previous issues of the Year Book but which are not included, or are included in abbreviated form only, in the present issue.

The figures below indicate, respectively, the number and page of the Year Book to which reference is made. In cases where matter was published in more than one previous issue, the volume and page for the last issue containing such matter are given. For possible revisions, however, issues immediately following the one referred to should also be consulted.
