

CHAPTER 7

PRICES

RETAIL PRICES AND PRICE INDEXES

Retail prices of food and groceries and average rentals of houses have been collected by the Australian Statistician for the years extending back to 1901 and, in some cases, by the Statisticians of various States for earlier years.

Retail prices of a more extensive range of commodities (including clothing) and certain services in common demand have been ascertained at frequent and regular intervals since 1923. (Comparable information was ascertained for the month of November in each year from 1914 to 1922.) The range of items for which retail prices data is obtained was considerably expanded in 1948 and in later years. Average retail prices of certain food and grocery items in the relevant periods were published in the annual *Labour Report* (now discontinued). Descriptions of these earlier indexes were last published in *Labour Report No. 58, 1973*.

The current retail price index, the Consumer Price Index (CPI), was published for the first time in August 1960 and was compiled retrospectively to the September quarter 1948. A description of the Consumer Price Index is given below.

Further information about the CPI is contained in a booklet entitled *A Guide to the Consumer Price Index* (6440.0) which is available from the ABS on request. For a more detailed account, *The Australian Consumer Price Index, Concepts, Sources and Methods* (6461.0) describes what the index measures, the goods and services included in it, and how the index is produced; it also describes the problems encountered in compiling the CPI and how those are dealt with.

The Consumer Price Index

Introduction

The CPI measures quarterly changes in the price of a 'basket' of goods and services which account for a high proportion of expenditures by metropolitan wage and salary earner households. This 'basket' covers a wide range of goods and services, arranged in the following eight groups: food; clothing; housing; household equipment and operation; transportation; tobacco and alcohol; health and personal care; and recreation and education. Each group is in turn divided into sub groups.

As from June quarter 1982 the geographic coverage of the CPI has been expanded to include a full CPI for Darwin.

Index numbers at the *group* and *All Groups* levels are published for each State capital city, Canberra, Darwin, and for the weighted average of eight capital cities. Index numbers for *All Groups* are also published for the weighted average of six State capital cities. *Subgroup index numbers* are published for the weighted average of eight capital cities.

Index population

Because the spending patterns of various groups in the population differ somewhat, the pattern of one large group, fairly homogeneous in its spending habits, is chosen for the purpose of calculating the CPI. The CPI population group is, in concept, *metropolitan employee households*. For this purpose *employee households* are defined as those households which obtain the major part of their household income from wages and salaries; and *metropolitan* means the eight capital cities.

Weighting pattern

There are 105 expenditure classes (i.e. groupings of like items) within the current CPI and each expenditure class has its own weight, or measure of relative importance. In calculating the index, price changes for the various expenditure classes are combined using these weights.

Changes in the weighting pattern have been made at approximately five-yearly intervals to take account of changes in household spending patterns. The CPI, in fact, comprises ten series of price indexes which have been linked to form a continuous series. The tenth series (i.e. the current series) was introduced as from the March quarter 1982, with a weighting pattern based on estimated household expenditure in 1979-80 and on a reference base 1980-81 = 100.0. Details of the weighting pattern are published in the booklet *A Guide to the Consumer Price Index*.

The CPI 'basket' of goods and services covers items which are considered representative of metropolitan household spending habits and whose prices can be associated with an identifiable and specific quantity of a commodity or service. For instance, price changes for a given quantity and quality of bread or refrigerators can be measured and included in the CPI. Income taxes and personal savings, on the other hand, do not form part of the CPI because they cannot be clearly associated with the purchase of a specific quantity of a good or service.

Price collection

Since the CPI is designed to measure the impact of changing prices on metropolitan wage and salary earner households, price movements are monitored in the kinds of retail outlets or other establishments where such households would normally purchase goods and services. This involves collecting prices from many sources including supermarkets, department stores, footwear stores, restaurants, garages, dental surgeries and hairdressers. Items such as bus, rail and air fares, electricity and gas charges, telephone charges and local authority rates are collected from the appropriate authorities. Information on rents is obtained from property management companies and government housing authorities. In total, around 85,000 separate price quotations are collected each quarter.

Prices of the goods and services included in the CPI are generally collected quarterly. However, some important items are priced monthly or more frequently (e.g. bread, fresh meat and fish, fresh fruit and vegetables, petrol, alcohol and tobacco) and a small number annually (e.g. seasonal clothing, local government rates and charges).

The bulk of items for which prices are collected quarterly are priced at the middle of the mid-month of the quarter (i.e. in August, November, February and May), but, to facilitate a more even spread of the field collection workload, some goods and services are priced in the first and third months of each quarter. Items priced in the third month are generally those subject to price changes at discrete points of time (e.g. electricity and postal charges, milk); in these cases information is obtained of any changes in price during the quarter so that a weighted average price for the whole quarter can be calculated.

The prices used in the CPI are those that any member of the public would have to pay on the pricing day to purchase the specified good or service. Any sales or excise taxes which the consumer must pay when purchasing specific items are included in the CPI price. Sale prices, discount prices and 'specials' are reflected in the CPI so long as the items concerned are of normal quality (i.e. not damaged or shop soiled) and are offered for sale in reasonable quantities. To ensure that the price movements reflect the experience of the bulk of the metropolitan population, the brands and the varieties of the items which are priced are generally those which sell in greatest volume.

Changes in quality

The CPI aims to measure the price change of a constant basket of goods and services over time. For this reason, efforts are made to ensure that identical or equivalent items are priced in successive time periods. This involves evaluating changes in the quality of goods and services included in the index, and removing the effects of such changes so that the index reflects only the price change.

Periodic revision of the CPI

The CPI is periodically revised in order to ensure it continues to reflect current conditions. CPI revisions have usually been carried out at approximately five-yearly intervals, the most recent having been completed in June 1982. Following each revision the new list of items and weights (i.e. the new CPI basket) is linked to the previous series to form one continuous series. The process of linking ensures that the continuous series reflects only price variations and not differences in costs of the old and new baskets.

Earlier CPI series

The index has been compiled for each quarter from the September quarter 1948. The above description of the CPI refers to the tenth series which was introduced as from the March quarter 1982. A description of earlier CPI series is contained in the *Labour Report No. 58, 1973*, and in previous issues of the Year Book.

CONSUMER PRICE INDEX: ALL GROUPS INDEX NUMBERS

(a) The index numbers are designed to measure movements in retail prices of specified groups of items for each city individually. They measure variations from time to time and not differences in price levels between cities. (b) Base: March quarter 1982=100.0. The group index is not compiled for quarters prior to the base period.

Previous retail price indexes

Five series of retail price indexes were compiled by the ABS at various times prior to the introduction of the Consumer Price Index in 1960. These indexes are described in Year Book No. 61.

An index of retail price movements from 1901 onwards has been derived by linking together the following indexes: from 1901 to 1914, the 'A' Series Retail Price Index; from 1914 to 1946-47, the 'C' Series Retail Price Index; from 1946-47 to 1948-49, a composite of Consumer Price Index Housing Group (partly estimated) and 'C' Series Index excluding Rent; and from 1948-49 onwards, the Consumer Price Index. The continuous series derived in this way is shown in the table below. As the indexes differ greatly in scope, the resulting series is only a broad indication of long-term trends in retail prices.

RETAIL PRICE INDEX NUMBERS WEIGHTED AVERAGE OF SIX STATE CAPITAL CITIES

(a) The items priced and the levels at which they are priced in these indexes vary widely according to the intended purposes of the indexes of the various countries. The index numbers show fluctuations in prices in each country and do not measure relative price levels between countries. (b) Consumer Price Index converted to base: 1970 = 100. (c) Base 1980 = 100.

Wholesale price indexes

Introduction

The ABS compiles a range of Industry Price and External Trade Price Indexes relating to materials used and articles produced by defined sectors of the Australian economy. Each index is calculated using fixed weights. In compiling the indexes, prices are collected from representative suppliers, manufacturers, importers or exporters of the goods included in the indexes. For all industry price indexes (except the *Price Index of Materials Used in Manufacturing Industry*) prices are generally collected at the mid-point of each month. In the case of the *Price Index of Materials Used in Manufacturing Industry* and the *Export Price Index*, average monthly prices are mainly used in compiling the indexes. Weighted average quarterly prices are used to compile the *Import Price Index*.

All indexes (except the *Import Price Index*) are compiled and published monthly. The *Import Price Index* is compiled and published quarterly. Published index numbers for financial years are the simple averages of the relevant monthly or quarterly index numbers. Annual index numbers for these indexes are shown below. Index numbers for each month (or quarter for the *Import Price Index*) together with more detailed information concerning methods used in compiling these indexes, are shown in the bulletins published for each index. Information on the weighting patterns for each index is available from the ABS on request.

Price index of materials used in house building

This index measures changes in prices of selected materials used in the construction of houses. Its composition reflects the usage of materials in houses which were selected as representative for the purpose. Weights are based on the year 1968-69. The reference base of the index is the year 1966-67 = 100.0. Further information concerning the method of compiling the index, as well as more detailed index numbers, is shown in the publications *Price Index of Materials Used in House Building* (6408.0), *Labour Report* No. 58, 1973 and Year Book No. 60.

PRICE INDEX OF MATERIALS USED IN HOUSE BUILDING
GROUP INDEX NUMBERS—WEIGHTED AVERAGE OF SIX STATE CAPITAL CITIES
 (Base of each index: Year 1966-67=100.0)

(a) The separate city indexes measure price movements within each city individually. They do not compare price levels between cities.

Price index of materials used in building other than house building

The *Price Index of Materials Used in Building Other than House Building* (6407.0), on a reference base 1966-67 = 100.0, was discontinued in January 1981. Monthly index numbers on a 1966-67 = 100.0 reference base are available for the period July 1966 to January 1981. A description of the discontinued index is shown in previous year books and in the monthly publications issued up to and including January 1981.

The revised price index of materials used in building other than house building—six State capital cities

The revised *Price Index of Materials Used in Building Other than House Building* for the six State capital cities was introduced in February 1981 on reference base 1979-80 = 100.0.

This index measures changes in prices of selected materials used in the construction of buildings other than houses. Its composition reflects the usage of materials in the construction of buildings (other than houses) commenced in the three years ending June 1977.

Further information concerning the method of compiling the index can be obtained from the February 1981 issue of the publication *Price Index of Materials Used in Building Other than House Building—Six State Capital Cities* (6407.0).

Price index of materials used in building other than house building—Darwin

The *Price Index of Materials Used in Building Other than House Building* for Darwin was introduced in September 1982 on a reference base 1981-82=100.0. The scope of the index is the same as for the other capital cities. Further information concerning the method of compiling the index can be obtained from the September 1982 issue of the *Price Index of Materials Used in Building Other than House Building—Six State Capital Cities and Darwin* (6407.0).

The tables below show annual index numbers for selected ASIC Groups and 'All groups' for the weighted average of six State capital cities. In addition, 'All groups' index numbers for each State capital city and Darwin are shown. Index numbers for selected materials and special combinations of materials and monthly index numbers are shown in each issue of the monthly price index publication *Price Index of Materials Used in Building Other than House Building—Six State Capital Cities and Darwin* (6407.0).

1982-83	r 139.9	r 141.6	r 136.1	r 141.9	r 144.3	r 138.8	r 136.1	r 111.2
1983-84p	148.3	149.1	144.1	152.9	153.6	146.7	146.2	118.6

(a) The separate city indexes measure price movements within each city individually. They do not compare price levels between cities.

(b) The index series for 1978-79 is based on the series previously published on a reference base 1966-67=100.0. It has been converted to the reference base 1979-80=100.0 by linking the old and new series in the year 1979-80.

Price index of materials used in manufacturing industry

This index measures changes in prices of materials (including fuels) used by establishments classified to the Manufacturing Division of the Australian Standard Industrial Classification (ASIC), as described in the ABS publication *Australian Standard Industrial Classification (Preliminary Edition) 1969* (1201.0). The index is on a *net basis*, i.e. it relates in concept only to those materials which are used by establishments within the Manufacturing Division in Australia and which have been produced by establishments outside that Division. Materials purchased by establishments classified to the Australian Manufacturing Division from other establishments in that Division are outside the scope of the index.

The reference base of the index is the year 1968-69=100.0. The weighting base of the index corresponds to the year 1971-72. The items included in the index were allocated weights in accordance with estimated manufacturing usage in 1971-72. The selected items are combined for publication purposes into broad groups using two different classifications:

- (i) Australian Standard Industrial Classification (ASIC), and
- (ii) Standard International Trade Classification (SITC (R)).

Further information concerning the method of compiling the index, as well as more detailed index numbers, is shown in the publications *Price Index of Materials Used in Manufacturing Industry, Australia* (6411.0) and Year Book No. 61.

PRICE INDEX OF MATERIALS USED IN MANUFACTURING INDUSTRY(a): GROUP INDEX NUMBERS BASED ON AUSTRALIAN STANDARD INDUSTRIAL CLASSIFICATION

(Base of each index: Year 1968-69=100.0)

For footnote, see table following

PRICE INDEX OF MATERIALS USED IN MANUFACTURING INDUSTRY(a): GROUP INDEX NUMBERS BASED ON STANDARD INTERNATIONAL TRADE CLASSIFICATION (REVISED)

(Base of each index: Year 1968-69=100.0)

	Manufactured materials (imported) (b)			Other materials (imported and home produced) (c)			All groups
	Chemicals	Metal manu- factures, components for transport equipment and machinery	Other manufactured materials	Food, live animals and tobacco	Crude materials (excl. fuels)	Electricity, gas and fuels	
Value weight	6.67%	5.21%	5.76%	45.87%	20.66%	15.83%	100.00%
1978-79	180.9	271.6	201.3	232.5	227.4	362.4	248.8
1979-80	225.1	294.2	230.3	285.1	288.8	554.6	321.8
1980-81	244.7	310.3	242.9	299.5	286.9	695.5	353.2
1981-82	252.8	320.7	257.3	r 283.9	r 281.4	771.8	358.9
1982-83	271.0	r 343.9	r 280.8	r 291.2	r 303.9	880.7	r 388.0
1983-84p	282.8	358.0	288.0	314.9	319.2	868.7	402.0

(a) The index is on a net basis and relates in concept only to materials that enter Australian manufacturing industry from other sectors of the Australian economy or from overseas. (b) Excluding the manufactured imported crude materials listed in footnote (c). (c) Includes imported fuel oil and the following manufactured imported crude materials: Synthetic rubber, hardwood, softwood, woodpulp, synthetic fibre, vegetable oils.

Price indexes of articles produced by manufacturing industry

These indexes measure changes in the price of articles produced by establishments classified to the Manufacturing Division of the Australian Standard Industrial Classification (ASIC). Indexes are on a *net basis*, i.e. they relate in concept only to those articles which are produced in defined sectors of Australian manufacturing industry for sale or transfer to other sectors or for export or for use as capital equipment. Articles which are sold or transferred to other establishments within the sector for further processing as materials, components, fuels, etc. are excluded.

The following sector price indexes are published:

- (i) a net index for the Manufacturing Division of ASIC (known as the *All Manufacturing Industry Index*), and
- (ii) net indexes for the twelve sub-divisions within the Manufacturing Division.

The reference base of the index is the year 1968-69=100.0. The weighting base of the index corresponds to the year 1971-72. The items included in these indexes were allocated weights in accordance with estimated *net* sector production in the year 1971-72.

The selected items are combined for publication purposes using the structure of the Australian Standard Industrial Classification (ASIC).

Further information concerning the method of compiling the index and monthly index numbers for sub-divisions and special groupings are shown in the publication *Price Indexes of Articles Produced by Manufacturing Industry, Australia* (6412.0). Further information about the indexes is also shown in Year Book No. 62.

1983-84p	404.0	365.5	480.1	358.9	372.6	341.9

(a) For a full description of Division C, 'Manufacturing' and the subdivisions within the Manufacturing Division, see *Australian Standard Industrial Classification* (ASIC), *Preliminary Edition*, 1969. (b) This index is on a net division basis and relates in concept only to articles which are produced in the Manufacturing Division of ASIC for sale or transfer outside the Division. (c) These indexes are on a net subdivision basis; the index for each subdivision relates in concept to articles which are produced in that subdivision for sale or transfer outside the subdivision.

Import Price Index

The first issue of the Import Price Index produced by the ABS was released in May 1983 and covers the period September quarter 1981 to December quarter 1982, on a reference base 1981-82 = 100.0. This index, published quarterly, replaces the import price index previously published by the Reserve Bank of Australia on a reference base 1966-67 = 100.

The Import Price Index measures changes in prices of *imports of merchandise* into Australia. The index numbers for each quarter relate to prices of imports landed in Australia during the quarter.

The commodities directly represented in the index were selected on the basis of their import values in the years 1978-79, 1979-80 and 1980-81. They were allocated weights in accordance with the average value of imports for each commodity over the three years ended June 1981.

The selected commodities are combined for publication purposes into broad index groups using three different classifications:

- (i) Australian Import Commodity Classification (AICC) 1980-81 (1204.0)
- (ii) Australian Standard Industrial Classification (ASIC) 1978 (1201.0)
- (iii) United Nations Classification by Broad Economic Categories (BEC) 1976

In addition, BEC categories have been rearranged to form the broader end use classes: Capital goods, Intermediate goods and Consumption goods.

Further information concerning the method of compiling the index can be obtained from the December Quarter 1982 issue of the publication *Import Price Index* (6414.0) and *Year Book No. 68*. More detailed index numbers are shown in the quarterly publication *Import Price Index, Australia* (6414.0).

Export price index

An annual index of export prices has been published by the bureau since its inception. Brief descriptions of indexes covering the period between 1901 and 1979 are shown in Year Book No. 55, pages 256-7 and Year Book No. 58, pages 240-2.

The revised Export Price Index was introduced in July 1979. It relates to *all exports of merchandise* from Australia. The index numbers for each month relate to prices of those exports of merchandise that are physically shipped from Australia during that month.

The reference base of the index is the year 1974-75 = 100. The commodities directly represented in the index were selected on the basis of their export values in the years 1974-75, 1975-76 and 1976-77. They were allocated weights in accordance with the average value of exports for each commodity over the three years ended June 1977.

The selected commodities are combined for publication purposes into broad index groups using two different classifications:

- (i) Australian Export Commodity Classification (AECC) 1978-79 (1203.0);
- (ii) Australian Standard Industrial Classification (ASIC) 1978 (1201.0).

Further information concerning the method of compiling the index can be obtained from the July 1979 issue of the publication *Export Price Index* (6405.0) and Year Book No. 64. More detailed index numbers are shown in the monthly publication *Export Price Index, Australia* (6405.0).

Previous wholesale price indexes

The *Melbourne Wholesale Price Index*, first compiled in 1912, was discontinued in 1961. The *Wholesale Price (Basic Materials and Foodstuffs) Index*, which replaced the Melbourne Wholesale Price Index from 1936-37, was discontinued in 1970. Further information concerning these indexes is shown in Year Book No. 61.

PRICES SURVEILLANCE AUTHORITY

General

On 19 March 1984, concurrent with the proclamation of the *Prices Surveillance Act 1983*, the Petroleum Products Pricing Authority was abolished and its activities subsumed by the Prices Surveillance Authority.

The functions of the Authority are to consider price notices submitted to it in accordance with Section 22 of the Act and to hold inquiries into matters relating to prices for the supply of goods and services. The Authority is required to report to the Minister the results of each such inquiry.

Legislative Provisions

The Act provides for the declaration of persons in relation to the supply of specified goods and services. Notifications to the Authority are required where declared persons propose to charge higher than currently existing prices for those specified goods and services. Action by the Authority in relation to price notifications includes the issuing of a notice stating that it has no objection to the proposed prices, a notice that it has no objection to a price lower than the proposed price, and recommending to the Minister that a public inquiry be held.

The Authority is required to hold such inquiries as directed by the Minister and, with the approval of the Minister, such other inquiries as it thinks fit.

Although the Act provides that prices shall not be increased during an inquiry provision exists for the granting of interim price increases pending the outcome of an inquiry.

HOUSEHOLD EXPENDITURE SURVEYS

During the financial years 1974–75 and 1975–76, the ABS conducted two surveys in order to obtain information about the expenditure patterns of private households. The 1974–75 survey was confined to a sample of households in the six State capital cities and Canberra (collection in Darwin being suspended in December 1974 due to cyclone Tracy), while the coverage of the 1975–76 survey was extended to include other urban and rural regions. Apart from limited attempts in 1910–11 and 1913 to assess the spending patterns of Australian households, these surveys were the first official collections of household expenditure statistics conducted in this country.

Surveys of household expenditure and related topics have formed an integral part of the statistical programmes of a number of other countries for many years. Perhaps the most important reason for the collection of data relating to expenditure at the household level is to provide information for use in improving the representativeness of the items and the weighting pattern used to compile the Consumer Price Index (see page 151). Household expenditure statistics also provide a rich source of data needed for a wide range of policy and research purposes. These include the planning of welfare services; assessing the need for, and effect of, programmes in fields such as housing, education and health; assessing the impact of taxation and government benefits; and improving estimates of private final consumption expenditure in the National Accounts.

Details about the 1974–75 and 1975–76 surveys are contained in Year Book No. 63, pages 119–123.

A further household expenditure survey was conducted during the calendar year 1984.

BIBLIOGRAPHY

ABS Publications

- Monthly summary of statistics (1304.0)
- Digest of current economic statistics (monthly) (1305.0)
- Consumer price index (quarterly) (6401.0)
- Average retail prices of selected items (quarterly) (6403.0)
- Export price index (monthly) (6405.0)
- Price index of materials used in building other than house building (monthly) (6407.0)
- Price index of materials used in house building (monthly) (6408.0)
- Price indexes of metallic materials (monthly) (6410.0)
- Price index of materials used in manufacturing industry (monthly) (6411.0)
- Price indexes of articles produced by manufacturing industry (monthly) (6412.0)
- Import price index (quarterly) (6414.0)
