NOTES ON THE ESTIMATES

MAIN FEATURES

NOTE: Changes in individual quarters are necessarily subject to the uncertainties discussed in the Explanatory notes under Interpretation of quarterly estimates, and furthermore some may be substantially revised as firmer data come to hand. This applies particularly to the estimates for the two most recent years for gross operating surplus, the income of companies and non-farm unincorporated enterprises, depreciation, and therefore to the estimated magnitude of change in gross non-farm product.

ESTIMATES OF MAIN AGGREGATES AT AVERAGE 1979-80 PRICES, SEASONALLY ADJUSTED

.. not applicable

In current price seasonally adjusted terms, wages, salaries and supplements rose by 3.2 per cent in March quarter 1986, following a rise of 3.4 per cent in the previous quarter, while gross operating surplus of trading enterprise companies rose 0.8 per cent after falling by 7.5 per cent in the December quarter 1985.

The following notes are provided to aid analysis of the estimates for recent quarters.

Terms of trade

There has been a significant decline in Australia's *terms of trade* in recent quarters. This is illustrated in the graph below.

There are several ways of measuring the terms of trade.

A common means of doing so is by calculating an index of the form:

$$\frac{\text{Price index of exports}}{\text{Price index of imports}} \times 100$$

Price index of imports

In this publication the price indexes used in calculating the terms of trade are the implicit price deflators for exports of goods and services and for imports of goods and services. They take into account not only the changes in the prices of exports and imports but also the effects of changes in the composition of exports and imports on total recorded price movements. The actual values of the index during the last 9 quarters are presented in the table below.

Quarters ended	Index (a)
1984—	
March	99.5
June	98.9
September	97.7
December	97.7
1985—	
March	97.4
June	93.8
September	90.7
December	88.4
1986—	
March	84.2

(a) Base 1979-80 = 100.0

Gross domestic product (GDP) at constant prices, adjusted for the terms of trade

Changes in the aggregate 'Gross domestic product at constant prices' provide an indication of changes in the volume of goods and services produced within Australia. If, however, the terms of trade have changed significantly over the period of comparison the aggregate will not provide an accurate reflection of the change in the real purchasing power of the income generated by domestic production.

As with the terms of trade, no single agreed measure of the terms of trade effect is available, partly because the available methods may produce different results. An estimate of movements in GDP at constant prices, adjusted for the terms of trade effect, is shown for recent quarters in the table below. For comparison, movements in unadjusted GDP at constant prices are also shown.

Gross domestic product at constant prices (seasonally adjusted)

Quarters ended	% change without adjustment for terms of trade effect	% change with adjustment for terms of trade effect
1984—		
March	3.1	2.9
June	1.4	1.3
September	-0.9	-1.1
December	2.5	2.5
1985—		
March	-0.1	-0.1
June	2.5	1.8
September	1.6	1.0
December	-0.1	-0.5
1986—		
March	-0.1	-1.1
March quarter 1986 on March quarter 1985	4.0	1.1

The adjustment has been calculated by first revaluing exports of goods and services by the implicit price deflator of imports of goods and services (thereby providing a measure of the purchasing power of exports over imports). The actual constant price value of exports of goods and services has then been deducted from this value to provide the terms of trade adjustment which has been added to GDP at constant prices to obtain the required result.

Private final consumption expenditure (PFCE)

The first fall in almost 3 years was recorded during March quarter 1986 in seasonally adjusted PFCE at constant prices. It was largely attributable to a massive decline (-19.5%) in the value of motor vehicles purchased by the household sector, but most components of PFCE were rather weak in March quarter 1986.

Gross fixed capital expenditure—Sales of public sector assets

The national accounts attribute gross fixed capital expenditure to sectors on the basis of legal ownership. The following table provides information on major sales of fixed assets from the public sector to the private sector. Because the vast majority of these sales are associated

with leaseback and similar arrangements this data can be used to partially adjust capital expenditure estimates from sector of legal ownership to sector of effective ownership. However, it should be noted that such an adjustment would not take into account all arrangements under which assets owned by the private sector are effectively controlled by the public sector. Also, it would result in estimates of capital expenditure inconsistent with estimates of gross operating surplus and other aggregates in the sector accounts, for which information is not available to make estimates on other than the present basis.

MAJOR SALES OF FIXED ASSETS FROM THE PUBLIC SECTOR TO THE PRIVATE SECTOR (EXCLUDING DWELLINGS)

	Non-dwelling construction (\$ million)	Equipment (\$ million)	Total (\$ million)
1981-82	81	1,216	1,297

1986—			
March	—	—	—

Stocks

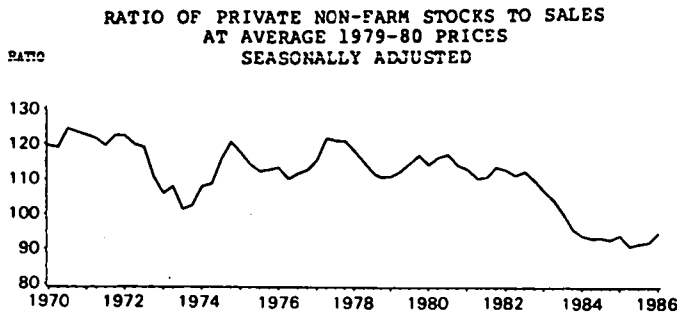

In seasonally adjusted terms private non-farm stocks at constant prices increased by \$283 million during the March quarter 1986.

With the moderate increase in private non-farm stocks associated with a decline in sales (a), the constant price private non-farm stocks to sales (a) ratio in the December quarter 1985 has risen slightly for the third successive quarter from the record low recorded in June quarter 1985. The recent history of this ratio is set out below.

Quarters ended	Ratio
1984—	
December	0.664
1985—	
March	0.670
June	0.655
September	0.658
December	0.660
1986—	
March	0.674

(a) Constant price sales are defined as gross non-farm product plus imports of goods and services (excluding imports of fuel, imports of certain large items of equipment by both the public and private sectors and certain other government imports) less changes in private non-farm stocks. (All these variables are at average 1979-80 prices.)

The following graph shows this ratio from March quarter 1970 onwards.

Statistical discrepancy

The statistical discrepancy represents the difference between the sum of the estimates of gross domestic product (GDP) and imports of goods and services on the one hand and the sum of the estimates of components of gross national expenditure and exports of goods and services on the other hand. Conceptually these two totals are the same. The inclusion of the statistical discrepancy on the expenditure side of the domestic production account is a convention and does not necessarily imply that the sum of the income components more accurately measures GDP than the sum of the expenditure components.

The aspect of the statistical discrepancy which is of most concern in the quarterly context is the magnitude of change from one quarter to the next. In some quarters there are quite significant movements in the seasonally adjusted constant price statistical discrepancy. A useful way of examining the significance of the statistical discrepancy is to compare the change in gross non-farm product as published with the result which would be obtained using the expenditure aggregates excluding the statistical discrepancy. The following table shows such a comparison for the last 8 quarters together with an annual comparison for the last two financial years.

PERCENTAGE CHANGES IN GROSS NON-FARM PRODUCT AT AVERAGE 1979-80 PRICES, SEASONALLY ADJUSTED

	<i>Income -based(a)</i>	<i>Expenditure -based(b)</i>
1983-84	3.5	2.7
1984-85	4.6	4.0
1984—		
June	1.4	1.3
September	-0.8	-0.4
December	2.5	2.0
1985—		
March	-0.4	1.5
June	2.7	2.5
September	2.4	1.6
December	-0.3	-0.4
1986—		
March	-0.3	0.4

(a) Gross non-farm product as published. (b) Gross non-farm product less statistical discrepancy.

Household saving ratio

Present estimates indicate that, on a seasonally adjusted basis, the proportion of household disposable income devoted to consumption in the March quarter was 85.1 per cent while household saving, which is derived as a balancing item, represented 14.9 per cent. Both of these ratios are affected by any deficiencies or inconsistencies in the estimation and seasonal adjustment of household income and expenditure.

The household saving ratio in recent quarters is as follows:

<i>Quarters ended</i>	<i>Percentage</i>
1984—	
December	15.3
1985—	
March	15.6
June	12.1
September	12.3
December	13.0
1986—	
March	14.9

Revisions

Revisions have been made to a number of public sector aggregates for 1984-85 to make them consistent with estimates recently published in *Government Financial Estimates, Australia, 1985-86* (\$501.0). Incorporation of final survey data from the the Survey of Employment and Earnings for the December quarter 1985 resulted in a significant downward revision to wages, salaries and supplements and consequently to the December quarter estimates for GDP and gross non-farm product at both current and constant prices.

The seasonally adjusted series for exports of sugar, sugar preparations and honey have been reanalysed as a result of an apparent change in the seasonality of the series in the 2 most recent March quarters. Revised seasonal factors have been used to adjust the series in both current and constant price terms from September quarter 1969 onwards, with the major effects being apparent from 1984 to the present time.

EXPLANATORY NOTES

Introduction

This publication provides estimates of the components of gross domestic product and national expenditure and supporting tables for the March quarter 1986, together with comparative estimates for the eight previous quarters and the four years 1981-82 to 1984-85. In addition, seasonally adjusted estimates of the major aggregates and some selected series are provided for the March quarter 1986, together with comparative estimates for the twelve previous quarters. Tables 32-42 provide time series, in both original and seasonally adjusted terms, for the period from September quarter 1969 for the aggregates contained in the domestic production account (at both current and average 1979-80 prices), some selected income aggregates and implicit price deflators.

Concepts, definitions, sources and methods

2. A basic guide to the Australian national accounts entitled *Australian National Accounts, Concepts, Sources and Methods* (5216.0) is available. It outlines major concepts and definitions, describes sources of data and methods used to derive annual and quarterly estimates for major aggregates at current and constant prices and discusses the accuracy and reliability of the national accounts. The concepts, definitions, sources and methods applicable to the estimates contained in this publication are as described in 5216.0 but with the changes outlined in 'Changes in this issue' in the December quarter 1985 issue of this publication and in Appendix A, *Australian National Accounts, National Income and Expenditure, 1983-84* (5204.0).

Interpretation of quarterly estimates

3. Estimating for a period of less than one year presents special problems in that it is often difficult to adhere strictly to definitions and concepts used in annual estimates. The measurement of income for a quarterly period is particularly difficult since it is not always possible to match the value of production for a quarter with the cost incurred in that production. This problem occurs, for example, in estimating the income of farm unincorporated enterprises in each quarter, and results in considerable variation in the estimates for this series, and for gross farm product, from quarter to quarter. Difficulties are also experienced in obtaining detailed data for short periods and in preparing consistent estimates from various sources where different accounting procedures and periods are used.

4. These problems inevitably affect the consistency and reliability of the current price estimates, and similarly affect the constant price estimates based on the current price estimates. Accordingly, these factors as well as the approximations and assumptions necessarily made in the revaluation of flows to constant prices should be borne in mind when interpreting or using the estimates, for example, in attempting to draw precise quantitative inferences relating to quarter-to-quarter changes in gross domestic product or its components, or in productivity.

5. Analysis of trends requires allowance for these uncertainties in estimation. The effects are in some measure indicated by the change in the statistical discrepancy for corresponding periods. Uncertainty in trends arises also from the likelihood of revisions as more information becomes available and from the irregularity of short-term movements. The inclusion of the statistical discrepancy on the expenditure side of the accounts is a convention and does not necessarily imply that the sum of

the income components more accurately measures GDP than the sum of the expenditure components (plus exports less imports). As household and other saving are estimated as balancing items in their respective accounts, care should be exercised in their interpretation.

6. Estimates of national income and expenditure are necessarily prepared from a wide range of statistical information, some of which is available quickly and some only with a delay of several years. For this reason most figures should be regarded as subject to revision as more complete and more accurate information becomes available. The revisions will be of two main types—those made to the most recent quarters as firmer quarterly or monthly data come to hand and those which are a consequence of revisions to annual totals and are distributed to the quarters approximately in accordance with existing quarterly patterns.

7. No simple measure is available of the accuracy of the major summary national accounting aggregates. However the following example illustrates the *sensitivity* of quarter to quarter growth to the timing of recording a transaction. If, in the latest year, the timing of recording a transaction were delayed by one quarter and if the transaction had an impact on constant price gross domestic product of +\$35 million then the measure of the rate of growth would be affected in three adjoining quarters (centred on the quarter in which the transaction was recorded) by -0.1, +0.2, and -0.1 percentage points respectively. Of course the percentage impact of such a timing delay on relevant sub-aggregates would be greater.

8. The quarterly implicit price deflators (IPDs) shown in Table 9 are derived by dividing seasonally adjusted current price estimates by the corresponding seasonally adjusted constant price estimates. Movements in the levels of individual implicit price deflators can be greatly affected by changes in the physical composition of the aggregates and their components. Generally, it is considered that IPDs derived from seasonally adjusted data are more reliable than those obtained by using original (i.e. unadjusted) series, because the former are less likely to be affected by compositional change than are the latter. However the seasonal adjustment process is itself a source of possible distortion, especially to the extent that it is not possible to identify, in a fully consistent way, the seasonality of the current price estimates and of the constant price estimates. A discussion of the limitations involved in using IPDs as measures of pure price change is contained in Appendix B of *Australian National Accounts, Concepts, Sources and Methods* (5216.0).

Seasonal adjustment

9. As most series are affected to some extent by seasonal factors, allowance should be made for normal seasonal variation. In Tables 6, 8, 9, 13, 17, 19, 22, 23, 33, 35 and 37 to 42, *seasonally adjusted* values are presented for selected series. Series which show substantial irregularities in the original or adjusted series should be treated with some reserve. As different methods of seasonal adjustment tend to produce different results, it is necessary to bear in mind the methods by which they have been derived and the limitations to which those methods are subject. It should also be noted that the methods of seasonal adjustment used by the ABS do not force the sum of the seasonally adjusted estimates for each quarter of a financial year to equal the original annual total.

10. The general methods used in the ABS for making seasonal adjustments are described in *Seasonally Adjusted Indicators, Australia, 1983* (1308.0). However, special methods have been used to adjust some of the components of gross farm product which were not amenable to seasonal adjustment by the usual methods. To obtain the seasonally adjusted estimates, the estimated values of production of wheat, other grain and sugar cane, for any financial year, are distributed equally over the four quarters of the year ended June. One effect of these methods is that changes in the annual production of these commodities first enter into the seasonally adjusted figures in the September quarter.

11. Where there is no apparent seasonality in their implicit price deflators, constant price estimates are seasonally adjusted using the same factors as are used for adjusting the corresponding current price estimates. As far as possible the remaining constant price estimates have been adjusted using methods similar to those for the corresponding current price estimates.

Analysis of contributions to growth table

12. Table 3 presents an analysis of the contribution provided by each major aggregate to the percentage change in seasonally adjusted gross domestic product at constant prices. The formula used to calculate the contribution of each aggregate to the growth in GDP is:

$$\frac{A(t)-A(t-1)}{GDP(t-1)} \times 100.0$$

where A(t) = value of aggregate A in quarter under consideration

A(t-1) = value of aggregate A in preceding quarter

GDP (t-1) = value of GDP in preceding quarter

All these values are seasonally adjusted constant price estimates. It should be noted that the figures in this table are additive within each quarter, unlike the percentage change tables shown elsewhere in this publication.

Rounding of figures

13. Although percentage changes are given to one decimal place in this publication, this does not imply that they can be regarded as accurate to the last digit shown. The figures after the decimal point are given to avoid distortions which may occur in rounding off the figures to the nearest half or whole number.

14. The procedures used in preparing this publication may occasionally result in rounding differences between

figures in this publication and corresponding figures in other publications.

15. Where figures have been rounded, discrepancies may occur between sums of the component items and totals.

Occasional Papers

16. Occasional Papers produced by officers within the national accounts area of the ABS report on various aspects of research being undertaken. They are not used for the release of official statistics and do not necessarily reflect the views of the ABS. The following Occasional Papers are available at all ABS offices:

Studies in National Accounting: Current Cost Depreciation and Net Capital Stock — Cherylee Bailey (1981/1) (\$1.70, \$2.40 including postage)

The Accuracy and Reliability of the Quarterly Australian National Accounts — A. G. Johnson (1982/2) (\$1.70, \$2.40 including postage)

State Accounts, Australia: Issues and Experimental Estimates — S. Burrell, J. Daniel, A. Johnson and R. Walters (1984/4) (\$3.30, \$4.50 including postage)

The Effects of Rebasings the Constant Price Estimates of the Australian National Accounts — R. Dippelsman (1985/1) (\$1.80, \$2.60 including postage)

Estimates of Depreciation and Capital Stock, Australia — R. Walters and R. Dippelsman (1985/3) (\$4.40, \$5.60 including postage)

Related publications

17. In addition to those mentioned above other ABS publications which may be of interest include:

Historical Series of Estimates of National Income and Expenditure, Australia (5207.0) (\$1.10, \$1.90 incl. postage) — issued for December Quarter only.

Australian National Accounts, Gross Product by Industry, 1982-83 and 1983-84 (5211.0)

Budget Paper: National Income and Expenditure, 1984-85 (5213.0)

18. Current publications produced by the ABS are listed in the *Catalogue of Publications, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Publications Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.
