NOTES ON THE ESTIMATES

MAIN FEATURES

NOTE: Changes in individual quarters are necessarily subject to the uncertainties discussed in the Explanatory Notes under Interpretation of quarterly estimates, and furthermore some may be substantially revised as firmer data come to hand. This applies particularly to the estimates for the two most recent years for gross operating surplus, the income of private corporate trading enterprises and non-farm unincorporated enterprises, and therefore to the estimated magnitude of change in gross non-farm product.

ESTIMATES OF MAIN AGGREGATES AT AVERAGE 1984-85 PRICES, SEASONALLY ADJUSTED

	Percentage Change		Percentage Points Contribution to Growth in GDP	
	June qtr 1989 to Sept. qtr 1989	Sept. qtr 1988 to Sept. qtr 1989	June qtr 1989 to Sept. qtr 1989	Sept. qtr 1988 to Sept. qtr 1989
Final consumption expenditure —				
Private	0.7	5.5	0.4	3.1
Government	1.7	5.5	0.3	1.0
Gross fixed capital expenditure	0.7	15.3	0.2	3.7
Increase in stocks —				
Private non-farm	—	0.4
Farm and public authority	1.0	0.9
Statistical discrepancy	-1.9	-0.6
Gross national expenditure				
Exports of goods and services	2.6	5.1	0.5	0.9
Imports of goods and services	-0.8	20.2	0.2	-4.0
Gross domestic product				
Gross farm product	—	3.5	—	0.1
Gross non-farm product	0.7	5.5	0.7	5.3

In current price seasonally adjusted terms, wages, salaries and supplements rose by 2.2 per cent in September quarter 1989 following a rise of 2.1 per cent in the previous quarter, while gross operating surplus of private corporate trading enterprises rose 3.7 per cent in the September quarter 1989 following a rise of 2.4 per cent in the previous quarter.

Changes in this issue

Following the introduction of self government for the Australian Capital Territory (A.C.T.), the A.C.T. is included in the State and local government sub-sector with effect from September quarter 1989. For previous periods the equivalent transactions are recorded in the Commonwealth government sub-sector. This affects estimates in Tables 27, 28 and 30-33.

Revisions that have been made to the estimates of major aggregates since the June quarter 1989 issue of this publication are shown in Tables 46-51. These tables will be a regular feature of this publication in future issues. The data shown represent the differences between the latest estimates in Tables 1, 2 and 5-8, and estimates published in the same tables of the previous issue.

Private final consumption expenditure

Estimates of private final consumption expenditure (PFCE) are included in Tables 18-21 of this publication.

The primary source for almost one half of this aggregate is the monthly retail survey conducted by the ABS. Up until June 1987 quarterly commodity sales data were available from this collection and were used to produce estimates for the relevant components of PFCE (primarily food; alcoholic drinks; clothing, footwear and drapery; household appliances; other household durables; other goods). These data are no longer available and component estimates for more recent quarters have been derived by applying relationships between industry and commodity sales data from the 1985-86 Retail Census and the 1986-87 Selected Service Industry Surveys to monthly industry data from the retail survey. The changeover in the monthly retail survey to collecting data on a retail turnover rather than a retail sales basis from July 1988 has further complicated the estimation of these components. The estimates of these individual components for periods after June 1987 should therefore be used with some caution. However the impact of the changes on the estimates of total PFCE is minimal.

Users should note that estimates of PFCE relate to expenditures of Australian residents. Individual components of PFCE are estimated on the basis of all activity occurring within Australia. The aggregate is converted to an Australian resident basis by the addition of 'net expenditure overseas', which is included in other goods and services in this publication. 'Net expenditure overseas' is defined as the expenditure of Australian residents overseas less the expenditure of non-residents in Australia and is obtained from the relevant Balance of Payments statistics.

In recent years this item has been significantly affected by the growth in overseas visitors arriving in Australia as a result of, amongst other things, the Bicentennial celebrations and Expo 88. The following table presents these estimates with and without the net expenditure overseas adjustment.

Private gross fixed capital expenditure - non-dwelling construction

In recent years several significant second-hand transactions have occurred involving the public sector. Therefore, in order to provide an indication of new work done on private non-dwelling construction, separate details are provided in the following table.

Terms of trade

Initial estimates indicate that Australia's terms of trade declined by 2.8 per cent in September quarter 1989, reflecting quite strong growth in import prices of 2.7 per cent and a small fall of 0.2 per cent in export prices.

Movements in Australia's terms of trade are shown in the graph below.

Gross domestic product (GDP) at constant prices, adjusted for the terms of trade

Changes in the aggregate 'gross domestic product at constant prices' provide an indication of changes in the volume of goods and services produced within Australia. If, however, the terms of trade have changed significantly over the period of comparison the aggregate will not provide an accurate reflection of the change in the real purchasing power of the income generated by domestic production.

The following graph shows constant price GDP before and after adjustment for the terms of trade effect.

Imports to sales ratio

The imports to sales ratio (see paragraph 22 of the 'Explanatory Notes') fell to 0.131 in September quarter 1989 from 0.133 in the previous quarter. This was associated with a decrease in endogenous imports of 1.1 per cent and an increase in sales of 0.4 per cent - both measured in seasonally adjusted constant price terms.

The ratio of imports to sales is graphed below.

Stocks to sales ratio

In seasonally adjusted constant price terms, private non-farm stocks increased by \$758 million (or 1.9 per cent) during September quarter 1989, while sales (see paragraph 21 of the 'Explanatory Notes') increased by \$259 million (or 0.4 per cent). Consequently, the stocks to sales ratio grew by 1.5 per cent to 0.565.

The following graph shows this ratio from September quarter 1974 onwards.

**RATIO OF PRIVATE NON-FARM STOCKS TO SALES
AT AVERAGE 1984-85 PRICES
SEASONALLY ADJUSTED**

Statistical discrepancy

The statistical discrepancy represents the difference between the sum of the estimates of gross domestic product (GDP) and imports of goods and services on the one hand and the estimate of components of gross national expenditure and exports of goods and services on the other hand. Conceptually, these two totals are the same. The inclusion of the statistical discrepancy on the expenditure side of the domestic production account is a convention and does not necessarily imply that the sum of the income components more accurately measures GDP than the sum of the expenditure components.

The aspect of the statistical discrepancy which is of most concern in the quarterly context is the magnitude of change from one quarter to the next. In some quarters there are quite significant movements in the seasonally adjusted constant price statistical discrepancy. A useful way of examining the significance of the statistical discrepancy is to compare the change in gross non-farm product as published, with the result which would be obtained using the expenditure aggregates excluding the statistical discrepancy.

The following chart shows such a comparison for the last 10 quarters.

Household saving ratio

Present estimates indicate that, on a seasonally adjusted basis, the proportion of household disposable income devoted to consumption in the September quarter was 92.0 per cent while household saving, which is derived as

a balancing item, represented 8.0 per cent. Both of these ratios are affected by any deficiencies or inconsistencies in the estimation and seasonal adjustment of household income and expenditure. Particular caution should be exercised in interpreting this ratio for recent years because major components may still be subject to significant revisions. The impact of such revisions on the saving ratio can be quite marked and can cause changes in apparent direction of the trend.

The following graph presents this ratio from September quarter 1974.

EXPLANATORY NOTES

Introduction

This publication provides estimates of the components of gross domestic product and national expenditure and supporting tables for the September quarter 1989, together with comparative estimates for the eight previous quarters and the four years 1985-86 to 1988-89. In addition, seasonally adjusted estimates of the major aggregates and some selected series are provided for the September quarter 1989, together with comparative estimates for the twelve previous quarters. Tables 46-51 show revisions that have been made to major aggregates since the previous publication. Tables 52-64 provide time series, in both original and seasonally adjusted terms, for the period from September quarter 1974 for the aggregates contained in the domestic production account (at both current and average 1984-85 prices), some income aggregates, implicit price deflators and some other selected series.

Concepts, definitions, sources and methods

2. A basic guide to the Australian national accounts entitled *Australian National Accounts: Concepts, Sources and Methods* (5216.0) is available. It outlines major concepts and definitions, describes sources of data and methods used to derive annual and quarterly estimates for major aggregates at both current and constant prices and discusses the accuracy and reliability of the national accounts. The concepts, definitions, sources and methods applicable to the current price estimates contained in this publication are as described in 5216.0 but with the changes outlined in Appendix A of *Australian National Accounts: National Income and Expenditure, 1986-87* (5204.0). An updated issue of 5216.0 will be released shortly and will contain information about the rebased constant price estimates (now compiled on a base year of 1984-85).

Interpretation of quarterly estimates

3. Estimating for a period of less than one year presents special problems in that it is often difficult to adhere strictly to the definitions and concepts used in annual estimates. The measurement of income for a quarterly period is particularly difficult since it is not always possible to match the value of production for a quarter with the cost incurred in that production. This problem occurs, for example, in estimating the income of farm unincorporated enterprises in each quarter and results in considerable variation in estimates for this series, and for gross farm product, from quarter to quarter. Difficulties are also experienced in obtaining detailed data for short periods and in preparing consistent estimates from various sources where different accounting procedures and periods are used.

4. These problems inevitably affect the consistency and reliability of the current price estimates, and similarly affect the constant price estimates based on the current price estimates. Accordingly, these factors as well as the approximations and assumptions necessarily made in the revaluation of flows to constant prices should be

taken into account when interpreting or using the estimates (for example, in attempting to draw precise quantitative inferences relating to quarter-to-quarter changes in gross domestic product or its components, or in measuring productivity).

5. Analysis of trends requires allowance for these uncertainties in estimation. To some extent, the effects are indicated by the changes in the statistical discrepancy for corresponding periods. Uncertainty in trends arises also from the likelihood of revisions as more information becomes available and from the irregularity of short-term movements. The inclusion of the statistical discrepancy on the expenditure side of the accounts is a convention and does not necessarily imply that the sum of income components more accurately measures GDP than the sum of the expenditure components (plus exports less imports). As household and other saving are estimated as balancing items in their respective accounts, care should be exercised in their interpretation.

6. Estimates of national income and expenditure are necessarily prepared from a wide range of statistical information, some of which is available quickly and some only with a delay of several years. For this reason most figures should be regarded as subject to revision as more complete and more accurate information becomes available. The revisions will be of two main types - those made to the most recent quarters as firmer quarterly or monthly data come to hand and those which are a consequence of revisions to annual totals and distributed to the quarters approximately in accordance with existing quarterly patterns.

7. No simple measure is available of the accuracy of the major summary national accounting aggregates. However, the following example illustrates the sensitivity of quarter-to-quarter growth to the timing of recording a transaction. If, in the latest year, the timing of recording a transaction were delayed by one quarter and if the transaction had an impact on constant price gross domestic product of +\$62 million then the measure of the rate of growth would be affected in the three adjoining quarters (centred on the quarter in which the transaction was recorded) by -0.1, +0.2, and -0.1 percentage points respectively. Of course the percentage impact of such a timing delay on relevant sub-aggregates would be greater.

8. The quarterly implicit price deflators (IPDs) shown in Table 9 are derived by dividing seasonally adjusted current price estimates by the corresponding seasonally adjusted constant price estimates. Movements in the levels of individual implicit price deflators can be greatly affected by changes in the physical composition of the aggregates and their components. Generally, it is considered that IPDs derived from seasonally adjusted data are more reliable than those obtained by using original (i.e. unadjusted) series, because the former are less likely to be affected by compositional change than are the latter. However the seasonal adjustment process

is itself a source of possible distortion, especially to the extent that it is not possible to identify, in a fully consistent way, the seasonality of the current price estimates and of the constant price estimates. A discussion of the limitations involved in using IPDs as measures of pure price change is contained in Appendix B of *Australian National Accounts: Concepts, Sources and Methods* (5216.0).

Seasonal adjustment

9. As most series are affected to some extent by seasonal factors, allowance should be made for normal seasonal variation. In a number of tables, *seasonally adjusted* values are presented for selected series. Series which show substantial irregularities in the original or adjusted series should be treated with some reserve. As different methods of seasonal adjustment tend to produce different results, it is necessary to take into account the methods by which seasonally adjusted estimates have been derived and the limitations to which those methods are subject. It should also be noted that the methods of seasonal adjustment used by the ABS do not force the sum of the seasonally adjusted estimates for each quarter of a financial year to equal the original annual total.

10. The general methods used in the ABS for making seasonal adjustments are described in *Seasonally Adjusted Indicators, Australia 1983* (1308.0). However, special methods have been used to adjust some of the components of gross farm product which were not amenable to seasonal adjustment by the usual methods. To obtain these seasonally adjusted estimates, the estimated values of production of wheat, other grain and sugar cane, for any financial year, are distributed equally over the four quarters of the year ended June. One effect of this method is that changes in the annual production of these commodities enter into the seasonally adjusted figures in the September quarter.

11. Where there is no apparent seasonality in their implicit price deflators, constant price estimates are seasonally adjusted using the same factors as are used for adjusting the corresponding current price estimates. As far as possible the remaining constant price estimates have been adjusted using methods similar to those for corresponding current price estimates.

12. Seasonally adjusted estimates of private final consumption expenditure for each State and Territory at current and average 1984-85 prices are shown in Tables 43 and 45 of this publication. Due to the relatively short span of data available for analysis, no Easter or trading-day correction factors have been applied in the seasonal adjustment of these series. The State and Territory series have been adjusted at a more aggregated level than the Australian series and independently of them (although as far as possible similar methods have been used). For these reasons the sum of the seasonally adjusted State and Territory series do not generally equal the seasonally adjusted Australian series.

13. Trend estimates are included in this publication. Smoothing seasonally adjusted series to create trend

estimates is a means of reducing the impact of the irregular component of the series. Users may wish to refer to the ABS Information Papers *A Guide to Smoothing Time Series - Estimates of 'Trend'* (1316.0) and *Time Series Decomposition - An Overview* (1317.0) for more detailed information on smoothing seasonally adjusted time series data.

Analysis of contributions to growth table

14. Table 3 presents an analysis of the contribution provided by each major aggregate to the percentage change in seasonally adjusted gross domestic product at constant prices. The formula used to calculate the contribution of each aggregate to the growth in GDP is:

$$\frac{A(t) - A(t-1)}{GDP(t-1)} \times 100.0$$

where $A(t)$ = value of aggregate A in quarter under consideration

$A(t-1)$ = value of aggregate A in preceding quarter

$GDP(t-1)$ = value of GDP in preceding quarter.

All these values are seasonally adjusted constant price estimates. It should be noted that the figures in this table are additive within each quarter, unlike the percentage changes shown in other tables in this publication.

Terms of trade

15. There are several ways of measuring the terms of trade. A common means of doing so is by calculating an index of the form:

$$\frac{\text{Price index of exports}}{\text{Price index of imports}} \times 100.0$$

16. In this publication the price indexes used in calculating the terms of trade are the implicit price deflators for exports of goods and services and for imports of goods and services. They take into account not only the changes in the prices of exports and imports, but also the effects of changes in the composition of exports and imports on total recorded price movements. The terms of trade is presented as a memorandum item in Tables 4 and 9.

Gross domestic product (GDP) at constant prices, adjusted for the terms of trade

17. Changes in the aggregate 'gross domestic product at constant prices' provide an indication of changes in the volume of goods and services produced within Australia. If, however, the terms of trade have changed significantly over the period of comparison this aggregate will not provide an accurate reflection of the change in the real purchasing power of the income generated by domestic production.

18. As with the terms of trade, no single agreed measure of the effect of the terms of trade on movements in GDP at constant prices is available, and the available methods will generally produce different results.

19. In this publication the adjustment has been calculated by first revaluing exports of goods and services by the implicit price deflator of imports of goods and services (thereby providing a measure of the purchasing power of exports over imports). The actual constant price value of exports of goods and services has then been deducted from this value to provide the terms of trade adjustment which has been added to GDP at constant prices to obtain the required result. The series is presented as a memorandum item in Tables 2 and 8.

Expenditure-based estimate of gross non-farm product

20. The published measure of GDP is the sum of the income components in the domestic production account. Alternatively, expenditure-based estimates of GDP and gross non-farm product can be produced by subtracting the statistical discrepancy from the published estimates. Expenditure-based estimates of gross non-farm product are presented as a memorandum item in Tables 2 and 8.

Private non-farm stocks to sales ratio

21. The denominator of this ratio is defined as gross non-farm product *plus* endogenous imports (imports of goods *excluding* imports of fuel, imports of certain large items of equipment by both the public and private sectors and certain other government imports) *plus* imports of services *less* changes in private non-farm stocks. All of these variables are at constant prices. The ratio is presented as a memorandum item in Table 8.

Imports to sales ratio

22. The ratio is endogenous imports to sales (both as defined for the private non-farm stocks to sales ratio - see paragraph 21). It is presented as a memorandum item in Table 8.

Household saving ratio

23. This is defined as the ratio of household saving to household disposable income, where household saving is a balancing item derived as the difference between household disposable income and private final consumption expenditure. The ratio is presented as a memorandum item in Table 25.

Data on floppy disk

24. All quarterly series included in this publication, with the exception of those included in the overseas trade tables, are available on floppy disk (*Australian National Accounts: Quarterly Data on Floppy Disk* (5228.0)). These data generally run from September quarter 1959 for current price estimates and from September quarter 1974 for constant price estimates. The cost is currently \$60 per release for most customers. Order forms for the service can be obtained by telephoning (062) 52 6684.

Related publications

25. In addition to those mentioned above, other ABS publications which may be of interest include:

Australian National Accounts: Historical Estimates (5207.0) - issued for December quarter only

Budget Related Paper No. 2, National Income and Expenditure (5213.0) - issued annually

Australian National Accounts: State Accounts (5220.0) - issued annually

Australian National Accounts: Capital Stock (5221.0) - issued annually

Australian National Accounts: Gross Product, Employment and Hours Worked (5222.0) - issued quarterly.

Australian National Accounts: Gross Product, Employment and Hours Worked (5211.0) - issued annually

Development of Multifactor Productivity Estimates for Australia, 1974-75 to 1987-88, Information Paper (5229.0)

26. Current publications produced by the ABS are listed in the *Catalogue of Publications, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Publications Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

Electronic services

VIATEL. Key *656# for selected current economic, social and demographic statistics.

AUSSTATS. Thousands of up-to-date time series are available on this ABS on-line service through CSIRONET. Further information can be obtained by calling the AUSSTATS Help Desk on (062) 52 6017.

TELESTATS. This service provides foreign trade statistics tailored to users' requirements. Further information is available on (062) 52 5404.

Floppy disk service

Selected ABS statistics are available on floppy disk. Further information is available on (062) 52 6684.

(A) QUARTERLY FIGURES ARE DERIVED FROM SEASONALLY ADJUSTED DATA.
 (B) DERIVED FROM DATA AT AVERAGE 1984-85 PRICES.
 (C) ANNUAL RATIOS DERIVED AS SIMPLE AVERAGES OF QUARTERLY RATIOS.
 (D) ANNUAL FIGURES DERIVED FROM ANNUAL DATA.
 (E) ANNUAL FIGURES DERIVED AS SUM OF ORIGINAL QUARTERLY FIGURES.

STATISTICS WEEKLY

•AUTHORITATIVE • OBJECTIVE • UNBIASED

A NEW PUBLICATION GIVING YOU A WEEKLY UPDATE
ON THE FACTS THAT COUNT

- Need to keep up with Australia's constantly changing economic situation ?
- Need to have essential information on hand?
- Need a better, more factual awareness of what's happening in Australian society ?

For an annual subscription of only \$175 (\$235 airmail for overseas subscribers), we can deliver to you each week the latest statistics — in an attractive and concise format. We highlight the features of major publications released during the week, with an emphasis on all the main economic indicators produced by the ABS.

Graphs and tables of key findings show trends and recent movements. The latest national and State indicators are presented in every issue plus a full listing of ABS publications released during the week keeps you up-to-date on everything that we've published.

We also let you know the dates when we're going to release major national statistics — to keep you ahead of our publishing program.

HOW TO SUBSCRIBE

1. If you're already an ABS subscriber, just include *Statistics Weekly* (Catalogue 1318.0) on your 1990 renewal form (despatched in September 1989).
2. If you're not already a subscriber, or you have returned your 1990 renewal form, phone the ABS subscription service in your capital city and we'll arrange for you to receive *Statistics Weekly* as soon as possible.
