(a) For the current acoount aggregates, a minus sign means an increace in a deficit, a decrease in a surplus, a docrease in exports or a decroase in imports; and a plus sign means a decrease in a deficit, an increase in a surphus, an increase in exports or an increase in imports. (b) Period averages.

## December quarter 1991 -

Balance on current account (seasonally adjusted). The current account deficit increased by $\$ 35$ million (or 1 per cent) to $\$ 3,079$ million compared with the September quarter 1991 but decreased by $\$ 1,514$ million (or 33 per cent) compared with the December quarter 1990.

The rise in the deficit compared to the September quarter was caused by:

- a fall of $\$ 434$ million ( 32 per cent) in the surplus on merchandise trade (merchandise exports fell 1 per cent, while merchandise imports rose 3 per cent);
- an increase of $\$ 134$ million ( 24 per cent) in the net services deficit; and
- a fall of $\$ 96$ million ( 16 per cent) in the net unrequited transfers suplus.

These results were substantially offset by a decrease of $\$ 629$ million ( 14 per cent) in the net income deficit.

The trend estimate for the December quarter current account deficit was $\$ 3,008$ million, down 5 per cent on the September quarter and the ninth successive quarterly fall.

Balance on capital account (not seasonally adjusted). The balance on capital account recorded a net inflow of $\$ 2,910$ million, up $\$ 119$ million on the net inflow in the September quarter. The change was the result of an increase of $\$ 205$ million in the inflow in net "other" capital transactions, parly offset by an increase of $\$ 48$ million in the outflow on net equity transactions and a fall of $\$ 38$ million in the inflow on net debt transactions.

GRAPH 1. CURRENT ACCOUNT MAIN AGGREGATES seasonally adjusted trend estimates at current prices

GRAPH 2. CAPITAL ACCOUNT MAIN AGGREGATES

## NOTES ON THE ESTIMATES

## Current account (seasonally adjusted)

"Volume" refers to values at average 1984-85 prices and "price" refers to implicit price deflators.

## Goods and services

The surplus on goods and services was $\$ 245$ million, down $\$ 568$ million (or 70 per cent) on the surplus recorded in the September quarter, due to a decrease of $\$ 434$ million in the merchandise trade surplus and an increase of $\$ 134$ million in the net services deficit.

In volume terms, exports of goods and services rose $\$ 97$ million, while imports of goods and services rose $\$ 159$ million. The resulting decrease of $\$ 62$ million in the surplus on goods and services will make a negative contribution of 0.1 percentage points to the December quarter 1991 expenditure based estimates of GDP at average 1984-85 prices, assuming no significant revisions to the GDP estimates for the preceding quarter. The merchandise trade surplus was down $\$ 20$ million and the net services deficit up $\$ 42$ million.

## Exports of merchandise

Exports of merchandise at current prices fell $\$ 108$ million, or 1 per cent, to $\$ 13,562$ million. Merchandise exports volumes rose marginally while prices fell 1 per cent.

Rural exports at current prices rose $\$ 15$ million but fell $\$ 50$ million ( 1 per cent) in volume terms. Increases in current prices were recorded in:

- "other" rural exports, up $\$ 97$ million (8 per cent) as a result of volume increases; and
- meat, up $\$ 30$ million (4 per cent), due to an increase in volume which was partly offset by a fall in price.

The most significant decrease occurred in sugar, down $\$ 80$ million ( 36 per cent), due mainly to a decrease in volume. An overall fall of $\$ 28$ million ( 5 per cent) in cereals resulted from a 17 per cent fall in volume which was largely offset by a 15 per cent increase in price.

Non-rural exports at current prices fell $\$ 123$ million (1 per cent) but rose $\$ 72$ million ( 1 per cent) in volume terms. The largest falls in current prices were recorded in:

- coal, coke and briquettes, down $\$ 215$ million (12 per cent) due to a decrease in volume; and
- transport equipment, down $\$ 107$ million (21 per cent), due mainly to a decrease in volume.

The most significant rises were recorded in:

- "other" mineral fuels, up $\$ 174$ million ( 22 per cent) due partly to price rises and partly to an increase in volume; and
- "other" non-rural exports, up $\$ 87$ million (37 per cent) due to an increase in volume:

Rural prices rose 2 per cent overall, while non-rural prices fell 2 per cent.

## Services crediss

Services credits at current prices rose $\$ 80$ million ( 2 per cent) to $\$ 3,665$ million as a result of a 3 per cent rise in volumes and a 1 per cent fall in prices. In both current price and volume terms, increases were recorded in all broad services categories except travel.

## Exports implicit price deflator

The implicit price deflator (IPD) for total exports of goods and services fell 1 per cent. On a fixed-weighted basis export prices were virtually unchanged, indicating that compositional changes were responsible for the fall in the IPD.

## Imports of merchandise

Imports of merchandise at current prices rose $\$ 326$ million ( 3 per cent) to $\$ 12,619$ million. Merchandise imports volumes rose marginally while prices rose 2 per cent.

Rises were recorded in all groupings except fuels and machinery. The largest increases occurred in:

- transport equipment, up $\$ 155$ million ( 9 per cent), due mainly to an increase in volumes;
- "other" manufactures, up $\$ 72$ million ( 3 per cent), due mainly to an increase in volumes; and
- food, beverages and tobacco, up $\$ 61$ million ( 10 per cent), again due mainly to volume increases.
Exogenous imports rose $\$ 91$ million, or 7 per cent, reflecting mainly increases in civil aircraft imports. Endogenous imports rose $\$ 235$ million, or 2 per cent. The overall volume of endogenous imports rose 1 per cent, while prices rose 2 per cent. In terms of volumes, consumption goods rose 5 per cent, capital goods fell 5 per cent, and "other" goods rose 1 per cent.
GRAPH 6. MERCHANDISE IMPORTS
average 1984-85 prices
semsonally mjusted

## Services debis

Services debits at current prices rose $\$ 214$ million ( 5 per cent), to $\$ 4,363$ million, as a result of a 4 per cent rise in volumes and a 1 per cent rise in prices. In both current
price and volume terms, increases were recorded in all broad services categories.

## Imports implicit price deflator

The implicit price deflator (IPD) for imports of goods and services rose 2 per cent. On a fixed-weighted basis, prices rose 1 per cent, indicating that compositional changes accounted for about half of the increase in the implicit price deflator.

GRAPH 7. IMPLICIT PRICE DEFLATOR FOR GOODS AND SERVICES based on seasonally adjusted data (1984-85=100)

## Terms of trade

Australia's terms of trade fell 3 per cent, resulting from the combination of the 1 per cent fall in the IPD for exports of goods and services and the rise of 2 per cent in the IPD for imports of goods and services.

GRAPH 8. TERMS OP TRADE FOR GOODS AND SERVICES (1984-85-100)

## Income

The net income deficit fell $\$ 629$ million ( 14 per cent) to $\$ 3,834$ million. Income credits rose $\$ 76$ million or 8 per cent, due mainly to rises in official sector interest and non-official sector dividends. There was a fall in non-official sector interest receivable due to lower yields. Income debits fell $\$ 553$ million or 10 per cent due to lower interest payable, reflecting lower yields, and lower remitted profits. The only categories to record increases were non-official direct and portfolio investment dividends.

## Unrequited transfers

The net unrequited transfers surplus fell by $\$ 96$ million ( 16 per cent) to $\$ 510$ million. Unrequited transfers credits were virtually unchanged. Unrequited transfers debits rose $\$ 93$ million, reflecting increased foreign aid payments in the December quarter.

## Capital account (not seasonally adjusted)

In original terms, the balance on capital account recorded a net inflow of $\$ 2,910$ million, up $\$ 119$ million on the net inflow in the September quarter. The increase in this net inflow was due to a $\$ 205$ million increase in the inflow (to $\$ 584$ million) in net "other" capital transactions. Partly offsetting this movement was an increase of $\$ 48 \mathrm{mil}-$ lion in the outflow (to $\$ 466$ million) in net equity transactions and a fall of $\$ 38$ million in the inflow (to $\$ 2,792$ million) in net debt transactions.
By sector, the balance on capital account was comprised of:

- a net inflow of $\$ 2,806$ million in official sector transactions, down $\$ 502$ million on the net inflow for the previous quarter; and

## GRAPH 10. NET CAPITAL TRANSACTIONS

- a net inflow of $\$ 105$ million in non-official sector transactions representing a tumaround of $\$ 622$ million on the net outflow for the September quarter.

The change in official sector transactions resulted from:

- a fall of $\$ 1,065$ million in the net inflow from general government transactions; and
- an increase of $\$ 563$ million in the net inflow from Reserve Bank transactions.

The fall in the net inflow from general govemment transactions was mainly accounted for by:

- a turnaround of $\$ 1,075$ million to an outflow of $\$ 251$ million in Australian investment abroad. Significant causes of the turnaround were general government lending, which turned around $\$ 315$ million to an outflow of $\$ 31$ million, and "other" general government transactions (including some real estate transactions of the Commonwealth Government) which recorded an outflow of $\$ 143$ million after an inflow of $\$ 532$ million;
- higher repayments of Commonwealth Government borrowing domiciled abroad, up $\$ 425$ million; and
- a lower net inflow from general government borrowing domiciled in Australia (down $\$ 375$ million).
An increase of $\$ 664$ million in the net inflow from State government borrowing domiciled abroad was partly offsetting.

The increase of $\$ 563$ million in the net inflow from Reserve Bank transactions was mainly due to higher sales of official reserve assets (up $\$ 548$ million).

The change in non-official sector transactions was comprised of:

- a net inflow of $\$ 2,585$ million from foreign investment in Australia, up $\$ 1,445$ million on the Scptember quarter; and
- a net outflow of $\$ 2,480$ million from Australian investment abroad, up $\$ 823$ million on the previous quarter's net outflow.

The main contributors to the increase in foreign investment in Australia were:

- portfolio and other borrowing, which tumed around $\$ 1,506$ million to an inflow of $\$ 1,221$ million with both the public and private sectors contributing;
- direct investment borrowing, up $\$ 369$ million; and
- the inflow from direct investment corporate equities, up $\$ 200$ million.

Major offseuing movements occurred in portfolio corporate equities (a tumaround of $\$ 311$ million to an outflow), direct investment net equity in branches (inflow down $\$ 232$ million) and private sector accounts payable/prepayments received (outflow up $\$ 166$ million).

The major factors responsible for the higher outflow on Australian investment abroad were:

- direct investment lending, which turned around $\$ 1,810$ million to an outflow of $\$ 1,017$ million;
- the outflow in portfolio and other non-bank enterprise lending, up $\$ 587$ million;
- direct investment net equity in branches, which turned around $\$ 464$ million to an outflow of $\$ 278$ million; and
- the outflow in direct investment corporate equities, up $\$ 285$ million.

The main offsetting movements occurred in the outflow from porfolio corporate equities which fell $\$ 1,578$ million and a turnaround of $\$ 373$ million to an inflow in portfolio and other lending by banks.

## Trade weighted index and US/\$A exchange rates

The trade weighted index at the end of December quarter 1991 was 55.9, down 7.8 per cent on the previous quarter. The Australian dollar fell 5 per cent against the US dollar to 0.7598 at the end of the quarter.

## Seasonal reanalysis

The seasonally adjusted estimates of the current account have been revised in this issue as a result of a seasonal reanalysis. The reanalysis has taken account of additional information that has become available since the previous reanalysis.
The factors to be used in compiling seasonally adjusted estimates for certain series (principally components of merchandise trade and investment income) up $t 0$ and including December quarter 1992 can be obtained, for a charge, from Trevor Jolly on Canberra (06) 2526820.

## Revisions

The current price (not seasonally adjusted) estimates in this publication for the current account and the official sector of the capital account are consistent with those published in the January 1992 issue of 5301.0, which was released on 3 March 1992. Table 30 shows revisions on an annual and quarterly basis since the September quarter 1991 issue of 5302.0. These revisions represent the cumulative effects of revisions made to previously published monthly estimates, and details can be obtained from the October 1991, November 1991, December 1991 and January 1992 issues of 5301.0.

The revisions to the non-official sector of the capital account have increased the balance on capital account by $\$ 272$ million in 1988-89 and $\$ 814$ million in 1989-90; and reduced the balance on capital account by $\$ 594$ million in 1990-91 and $\$ 21$ million in the September quarter 1991. These revisions are due to the incorporation of the latest available data from the 1990-91 annual and the December quarter 1991 Surveys of Foreign Investment.

## CHANGES IN THIS ISSUE

Commencing with this issue, the commentary and table contents in this publication have been expanded.

The commentary (Main Features and Notes on Estimates sections) has been revamped to avoid duplication of statistics now included in the new tables, but overall the commentary is now more extensive.

The main change has been the addition of a number of new tables. These tables present additional seasonally adjusted current account data (Tables 4, 8, 19, 20, 23 and
24); trend estimates of the current account (Table 5); related data on implicit price deflators, fixed-weighted indexes and terms of trade (Tables 10 and 15); a summary of revisions (Table 30); and historical data on selected balance of payments aggregates (Table 31). In addition, detailed general government and Reserve Bank capital transactions, shown in Tables 17 and 18 in previous issues, have been combined and are now presented in Table 26.

## CHANGES IN NEXT ISSUE

Commencing with the March quarter 1992 issue of this publication and the April 1992 issue of the monthly balance of payments publication (5301.0), the timing basis for compilation of merchandise exports statistics will change. The change was foreshadowed in the article, Recording of Merchandise Exports and the Impact of the EXIT System, which was included in the March quarter 1991 issue of this publication. The change involves compiling exports statistics primarily on the basis of goods shipped in any month rather than on the basis of the documentation of goods shipped in that or earlier months.

As explained in the article, customs documentation is the prime source used in the compilation of ABS foreign trade statistics and the related merchandise trade series in the balance of payments and national accounts. Because of the nature of the documentation flows from the Australian Customs Service (ACS) to the ABS, and the timeliness constraints facing the ABS in the publication of its statistics, a statistical month was developed for the recording of both exports and imports information in ABS foreign trade statistics.

For merchandise imports the statistical month captures most of the goods arriving in any calendar month. However, some goods arriving in any month are recorded in the following month due to the time taken for the documentation to be finalised and a small proportion are recorded in the previous month when the documentation is finalised before arrival.

For merchandise exports, the nature of the document processing described in the article has meant that historically only about half of any month's export shipments are recorded in that statistical month.

In balance of payments statistics, merchandise transactions should be recorded when a change of ownership occurs. Timing adjustments are incorporated, where practicable, in balance of payments statistics to compensate for the
lags in processing inherent in the adoption of a statistical month in foreign trade statistics. These adjustments have affected selected commodities such as wheat and sugar. Monthly details of these commodities have been obtained from the relevant marketing authorities and used to adjust foreign trade statistics for balance of payments (and national accounts) purposes. Certain adjustments are also made to compensate for the timing effects associated with a varying rate of processing of imports information through ACS. In addition, timing adjustments are also made for certain goods, such as those shipped on consignment or for the delivery of aircraft and ships, where ownership is known to change either before or after crossing the customs frontier.

The implementation of EXIT, an ACS system for exports electronic entry and cargo reporting (described in the article referred to above) will enable the ABS to compile more timely foreign trade exports statistics on a shipping date basis. This development will provide for a somewhat betuer match of exports and related financing and stocks measures in the economic accounts. This change in the basis of compilation will mean an end to certain balance of payments adjustments such as the sugar exports adjustment, although other adjustments will still be required.

The move to a shipping date basis for recording merchandise exports statistics will cause a break in the continuity of merchandise exports time series in foreign trade, balance of payments and national accounts statistics. Although the break in series is expected to be small, to assist users in overcoming this discontinuity, exports series back to 1981 will be recompiled on the shipping date basis and published at the same time as the new timing basis is introduced. Details on the impact of revisions to quarterly and monthly balance of payments merchandise exports series will be published in the next issue of this publication.

## THE RELATIONSHIP BETWEEN BALANCE OF PAYMENTS AND NATIONAL ACCOUNTS STATISTICS

This anticle comments on the relationships that exist between the national and international accounting frameworks, and specifically the statistics that are compiled using these frameworks, that is, the national accounts and the balance of payments.

## Balance of payments statistics

The Australian balance of payments is a statistical statement designed to provide a systematic record of Australia's economic transactions with the rest of the world. Broadly, it may be described as a system of consolidated accounts in which the accounting entity is the Australian economy and the entries refer to economic transactions between residents of Australia and residents of the rest of the world (nonresidents).

The balance of payments statement is generally presented in two main accounts - a current account and a capital account. The current account records transactions between Australian residents and non-residents in merchandise trade, services, income and unrequited transfers. The capital account records financial transactions involving the creation, extinction, purchases or sales of Australian residents' claims on, and liabilities to, non-residents.

Balance of payments statistics are based on standards produced by the International Monetary Fund (IMF). The fourth and current edition of the IMF Balance of Payments Manual (BPM4) was issued in 1977 and the Australian balance of payments is broadly based on this edition. Australia is contributing to the development of the next edition (BPM5), which is due for release about the end of 1992.

## National accounts statistics

National accounts are designed to provide a systematic and comprehensive framework in which to measure and analyse national economic activity. At their summary level, the national income and expenditure accounts reflect the key economic flows in the Keynesian system: production, income, consumption, investment and saving. At their more detailed level, they are designed to present a statistical picture of the structure of the economy and the detailed processes that make up domestic production and its distribution.

Transactions in the national accounts are classified into four main accounts representing the consolidated accounts of the nation - the domestic production account, the national income and outlay account, the national capital account and the overseas transactions account.

The domestic production account records the expenses incurred in production, and the receipts from sales of goods and services. The national income and outlay account records (on the income side) wages, salaries and supplements, net operating surplus and indirect taxes less subsidies (all from the domestic production account). From this income are deducted net payments of income and transfers to overseas to yield national disposable income.

The disbursement side of the account shows this disposable income being used for final consumption expenditure with the balance being the nation's saving - a source of finance for gross capital formation.

The national capital account shows, on the receipts side, consumption of fixed capital (transferred from the domestic production account) and saving (transferred from the national income and outlay account). On the payments side are purchases by all sectors of new buildings, structures and equipment, the increase in stocks of all sectors and a balance called net lending to overseas. The latter item is also the balance on current transactions in the overseas transactions account. All current transactions between Australian residents and non-residents are recorded in this account, which shows current receipts from overseas, consisting of the value of exports of goods and services plus property income and transfers received from overseas. These receipts are used for imports of goods and services as well as property income payable, and transfers to, overseas.

The balance on the overseas transactions account, net lending to overseas, is positive if current receipts are greater than current payments. Conversely, it is negative when receipts from overseas are not great enough to cover those payments. Australia has usually been in the position of having an excess of current payments over current receipts and therefore having negative net lending to overseas.

Net lending to overseas can also be viewed as comprising the excess of the net acquisition of foreign financial assets over the net incurrence of foreign liabilities. The Australian national accounts (ANA) analyses net lending to overseas from this viewpoint, in a complementary table to the overseas transactions account, by showing details of intemational capital transactions.

The ANA is based on the principles expounded in the United Nations' publication, A System of National Accounts (SNA), released in 1968. The SNA is also widely adopted by other government statistical offices throughout the world, although the degree to which the system is implemented varies considerably between countries. The 1968 edition is currently undergoing extensive revision in the light of experience of countries and intemational agencies in its use over the period since its release. The ABS is actively contributing to this review and the next edition is expected to be released during 1993.

## The relationship between the balance of payments and ANA

The Australian balance of payments can be considered to be encompassed within the conceptual framework of the ANA and forms an identifiable segment of that framework. The recording of economic transactions between residents and non-residents in the overseas transactions account and net lending to overseas table of the ANA is, with one exception (which is discussed below), paralleled by entries in the current and capital accounts respectively in the balance of payments. The balance of payments current and capital accounts, however, are presented in greater detail than the

TABLE 1. RELATIONSHIP OF ITEMS IN THE OVERSEAS TRANSACTIONS ACCOUNT AND THE NET LENDING TO OVERSEAS TABLE OF THE AUSTRALIAN NATIONAL ACCOUNTS (ANA) WITH ITEMS IN THE AUSTRALIAN BALANCE OF PAYMENTS

[^0]corresponding account and table in the ANA. The balance of payments can thus be considered as meeting the need for an elaboration of the overseas transactions account (just as input-output tables provide an elaboration of the domestic production account) for purposes of the more specialised study of the nation's international economic relations.

Both the ANA and the balance of payments are based on a double entry system of accounting. Transactions in the double-entry recording system are reflected in pairs of equal credit and debit entries. In the balance of payments, under such a system, credit entries are used to record exports of goods and services, income receivable and financial transactions involving either a reduction of Australia's foreign financial assets or an increase in its foreign liabilities. Conversely, debit entries are used to record imports of goods and services, income payable and financial transactions involving either an increase in Australia's foreign financial assets or a reduction in its foreign liabilities. Credit entries in the balance of payments statement are recorded without a sign while debits are recorded with a negative sign.

It should be noted that the balance of payments is compiled from the Australian viewpoint while the overseas
transactions account in the ANA is compiled from the point of view of the rest of the world.

A detailed comparison between items shown in the overseas transactions account and the net lending to overseas table of the ANA and the items shown in the balance of payments current and capital accounts is provided in Table 1 of this article.

It can be seen that the net lending to overseas item in the ANA is equivalent (with the one exception already noted and described on the next page) to the balance of payments item, the balance on current account. As this balance generally has a negative value (that is, it is in deficit), it can therefore be said that Australia uses foreign savings to finance its deficit on current account. In other words, this deficit is financed by foreign capital inflows of the same magnitude, for example, through increased borrowing from non-residents or by a reduction in official reserve assets.

The relationship between the balance of payments current account items and the corresponding ANA items exports of goods and services, imports of goods and services, net income paid overseas and net unrequited transfers to overseas, is shown in Table 2.

TABLE 2. RELATIONSHIP OF TTEMS SHOWN IN THE DOMESTIC PRODUCTION AND THE NATIONAL INCOME AND OUT. LAY ACCOUNTS OF THE AUSTRALIAN NATIONAL ACCOUNTS (ANA) WITH ITEMS IN THE CURRENT ACCOUNT OF THE AUSTRALIAN BALANCE OF PAYMENTS

[^1]
## Differences in the frameworks

Because of the correspondence between the data requirements of the balance of payments and the overseas transactions account and the frequent need for balance of payments analysis to be undertaken in a national accounts framework, it can clearly be seen that there is a need for consistency in the basic underlying principles of the two sets of statistics.

As previously indicated, there is only one conceptual difference between the ANA and the Australian balance of payments. This difference relates to the treatment of reinvested earnings (referred to in the ANA as undistributed income). For balance of payments purposes, reinvested earnings are treated as part of income payable or receivable on direct investment as well as part of investment flows into enterprises with direct investment. This treatment is based on the principle that such earnings result from a conscious decision by the direct investor to reinvest part or all of the earnings of the enterprise. The separate identification of these earnings as components of income and capital flows is regarded as adding to the analytical usefulness of the statistics. This treatment follows the recommendations of the BPM which emphasises the increase in the value of the nation's stock of foreign financial assets and liabilities caused by such reinvested earnings. Consequently, these earnings are treated as being distributed (in the current account) and reinvested (in the capital account).

On the other hand, the treatment in the ANA has followed the SNA guidelines which emphasise the savings aspect of reinvested earnings. These earnings are treated as savings of resident corporate enterprises in the National Capital Account. This remaining difference is expected to be resolved as part of the overall reconciliation of the SNA and the BPM currently underway.

While there is only one difference between the ANA and the balance of payments in the Australian context, many differences still remain between the two respective intemational standards. In the past, the differences between them have been justified on the grounds that they have different types of uses. It should also be appreciated that in many countries the development of balance of payments statistics preceded the development of national accounts statistics. As well, in many countries, the compilation of the balance of payments and the national accounts has been, and still is, undertaken by different organisations. These points help explain why traditionally there have been differences between the two frameworks and why these differences persist even today.

A considerable amount of work is proceeding intemationally to resolve the remaining inconsistencies. Australia is contributing to this work. It is expected that most of them will be resolved in the next editions of the two standards.

(a) Quarterly figures are denived from seasonally adjusted data. (b) These entries carry the opposite sign to related entries in Tables $1,2,3,5,7,11,12,13$ and 14 . (c) The fixed-weighted indexes are derived by combining individual component prices (base year 1984.85-100) with a weighting to reflect the relative importance of the components in the base year. (d) Derived by dividing the implicit price deflator (IPD) for merchandise exports fob by the IPD for merchandise imports fob. (e) Derived by dividing the IPD for servicen, crodits by the IPD for services, debits. (f) Derived by the dividing the IPD for total exports of goods and services by the IPD for total exports of goods and services by the IPD for toal imports of goods and services. (g) Derived by amoothing the verms of trede series using a tuilored sevent temn Henderson moving average.

## EXPLANATORY NOTES

## Introduction

This publication provides detailed estimates of Australia's balance of payments for the December quarter 1991 together with revised estimates for previous quarters and financial years. Longer term estimates, from September quarter 1959, consistent with those shown in this issue, will shortly be made available on request for a charge.
2. Tables 1 to 6 in this publication provide summary statistics; they show the main aggregates and the more important components of these aggregates and include, in addition, trend estimates and percentage changes in the seasonally adjusted estimates of the current account. The remaining tables, Tables 7 to 31, provide additional breakdowns, related series (e.g. exchange rates and the tradeweighted index), reconciliations of selected balance of payments series with other series (i.e. with foreign trade statistics and levels of official reserve assets), historical data on selected balance of payments aggregates and other analytical information.

## Concepts, sources and methods

3. Descriptions of the underlying concepts and structure of the balance of payments and the sources and methods used in compiling the estimates are presented in Balance of Payments, Australia: Concepts, Sources and Methods (5331.0). The publication also provides item definitions, explanations of seasonal adjustment, constant price estimates, implicit price deflators and the terms of trade; and an analysis of the quality of the estimates.

## Commodity breakdowns of merchandise

4. Commodity breakdowns of merchandise exports and imports are provided in Table 11 (at current prices), 12 (at average 1984-85 prices), 13 (at current prices, seasonally adjusted) and 14 (at average 1984-85 prices, seasonally adjusted). The groupings shown are based on the third revision of the United Nations Standard International Trade Classification (SITC rev 3) as follows:

SITC rev 3

## Exports

Section or Division
Rural -
Meat \& meat preparations
Cereal grains and cereal preparations
Sugar, sugar preparations \& honey
Wool and sheepskins
Other nural

$$
21 \text { (part),26(part) }
$$ 00,02,03,05,07 to 09, 12,21 (part), 22 to 25, 26(part),29,4

Non-rural -
Metal ores \& minerals
Mineral fuels -
Coal, coke and briqueutes 27,28

Other mineral fuels
Metals -
Gold

Exports (cont.)
Other metals
Machinery
Transport equipment
Manufactures nec
Other non-rural

## SITC rev 3 <br> Section or Division

67,68

## Imports

Food, beverages \& tobacco 0,1
Fuels
Chemicals (incl. plastics) 5
Textiles, fabrics etc 65
Metals and metal manufactures 67 to 69
Machinery 71 to 77
Transport equipment 78,79
Manufactures nec 61 to $64,66,8$
Other imports $\quad 2,4,9$
Note: Division 98 is not part of the SITC. In the balance of payments it comprises confidential items, which are removed from their actual division and combined in Division 98 to prevent disclosure of their values.

## Seasonal adjustment

5. Most of the current account series in this publication are affected to some extent by seasonal influences and it is useful to recognise and take account of this element of variation. However, seasonally adjusted statistics in this publication should not be regarded as in any way definitive as results from seasonal adjustment vary according to the method used.
6. The factors to be used in compiling seasonally adjusted estimates for certain series (principally components of merchandise trade and investment income) up to and including December quarter 1992 can be obtained, for a charge, from Mr Trevor Jolly on Canberra (06) 2526820.

## Trend estimates

7. The trend estimates are derived by applying a 7-term Henderson moving average to the seasonally adjusted series. The 7-term Henderson average (like all Henderson averages) is symmetric, but as the end of a time series is approached, asymmetric forms of the average are applied. Unlike the weights of the standard 7-term Henderson moving average, the weights employed here have been tailored to suit the particular characteristics of individual series. While the asymmetric weights enable trend estimates for recent quarters to be produced, it does result in revisions to the estimates for the most recent three quarters as additional observations become available. There may also be revisions because of changes in the original data and as a result of the re-estimation of the seasonal factors. Details of trend-cycle weighting patterns are available on request from the Supervisor, Time Series Analysis, on (06) 2526345.

## Accuracy and reliability of estimates

8. Because the transactions recorded in the balance of payments are of many different kinds, compilation of
balance of payments estimates entails the use of a very wide range of statistical data of varying degrees of accuracy and timeliness.
9. Therefore care should be exercised in the use and interpretation of estimates in this publication. The latest estimates are preliminary and subject to revision as more accurate data come to hand. Also, the more detailed estimates may be less accurate in relative terms than broader items and aggregates of which they form components.

## Investment income and capital transactions

10. Additional information about capital account and investment income transactions is available in the quarterly publication International Investment Position, Australia (5306.0) and in the annual publication International Investment Position, Australia (5305.0). Statistics in international investment publications are consistent with those in balance of payments publications. International investment publications also provide comprehensive statistics on the level of foreign investment in Australia, the level of Australian investment abroad and Australia's external debt.

## Transportation transactions

11. Additional information on freight and other transportation transactions is available on request for a charge from Mr. John Ratur on (06) 2525738.

## Comparability with capital expenditure statistics

12. Tables 11 and 13 in this publication contain current price estimates of imports of endogenous capital goods. Shorter-term movements in this series can differ quite significantly from the corresponding movements in the new private capital expenditure on equipment, plant and machinery series published in Private New Capital Expenditure, Australia (5625.0 and 5626.0). The main reasons for the differences are:

- The imports series includes all goods defined as endogenous capital goods, whereas the capital expenditure series relates only to goods classified as equipment, plant and machinery that are acquired by private enterprises in selected industries.
- The capital expenditure series includes all plant, machinery and equipment, irrespective of whether it has been imported or manufactured in Australia.
- Imports are valued f.o.b. at the point of export whereas estimates of capital expenditure are measured at domestic market prices, including international transport margins, government duties and domestic trade and transport margins.

13. Accordingly, while movements in imports of endogenous capital goods can provide a broad indication of movements in the import component of new private capital expenditure on equipment, plant and machinery, they do not necessarily provide an accurate indication of movements in total new private capital expenditure on these goods.

## Series available on request

14. Detailed quarterly export and import series at constant (average 1984-85) prices can be obtained by contacting Mr Stephen Waugh on Canberra (06) 252 6716. These series are based on foreign trade statistics (ie they are not adjusted to a balance of payments basis) and relate to selected divisions and sections of the SITC rev 3. Quarterly tables showing components of services can also be obtained from Mr Waugh. These tables provide original and seasonally adjusted current and constant price estimates, corresponding to the series shown (in original current price terms) in Tables 17 and 18 of this publication. Both sets of estimates are working estimates only and may not always be completely consistent with published estimates.

## Related publications

15. Other ABS publications which may be of interest include:

Balance of Payments, Australia (5301.0) - issued monthly Balance of Payments, Australia (5303.0) - issued annually

Balance of Payments, Australia: Concepts, Sources and Methods (5331.0)
Information paper - Seasonally Adjustment of Australia's Monthly Balance of Payments Statistics (5359.0).

Foreign Trade, Australia: Merchandise Exports (5432.0) issued monthly
Foreign Trade, Australia: Merchandise Imports (5433.0) issued monthly

Export Price Index, Australia (6405.0) - issued monthly Import Price Index, Australia (6414.0) - issued quarterly

International Investment Position, Australia (5305.0) issued annually
International Investment Position, Australia (5306.0) issued quarterly

Foreign Investment, Australia: Summary of Concepts, Sources and Methods (5355.0).
16. Current publications produced by the ABS are listed in the Catalogue of Publications, Australia (1101.0). The ABS also issues, on Tuesdays and Fridays, a Publications Advice (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

## For more information ...

The ABS publishes a wide range of information on Australia's economic and social conditions. A catalogue of publications and products is available from any of our Offices (see below for contact details).

## Information Consultancy Service

Special tables or in-depth data investigations are provided by the ABS Information Consultancy Service in each of our Offices (see below for contact details).

## Electronic Data Services

A growing range of our data are available on electronic media. Selections of the most frequently requested data are available, updated daily, on DISCOVERY (Key "656\#). Our Telestats service delivers major economic indicator publications ready to download into your computer on the day of release. Our PC.AUSSTATS service enables on-line access to a data base of thousands of up-to-date time series. Selected datasets are also available on diskette or CD-ROM. For more details on our electronic data services, contact Information Services in any of our Offices on the numbers below.

## Bookshops and Subscriptions

There are over 500 titles available from the ABS Bookshops in each of our Offices. You can also receive any of our publications on a regular basis. Join our subscription mailing service and have your publications mailed to you in Australia at no additional cost. Telephone our Publications Subscription Service toll free on 008020608 Australia wide.
