(a) For the current account aggregates, a minus sign means an increase in a deficit, a decrease in a surplus, a decrease in exports or a decrease in inports; and a plus sign means a decrease in a deficit, an increase in a surplus, an increase in exports or an increase in imports. (b) Period averages.

## June quarter 1992 -

Balance on current account (seasonally adjusted). The current account deficit rose by $\$ 866$ million (or 34 per cent) to $\$ 3,406$ million.

The rise in the deficit was caused by:

- a rise of $\$ 92$ million ( 18 per cent) in the net services deficit;
- a rise of $\$ 744$ million ( 22 per cent) in the net income deficit; and
- a fall of $\$ 58$ million ( 9 per cent) in the net unrequited transfers surplus.

These results for the non-merchandise components of the current account were parly offset by a rise of $\$ 28$ million ( 4 per cent) in the surplus on merchandise trade (merchandise exports and merchandise imports both rose 5 per cent).

The trend estimate for the June quarter current account deficit was $\$ 3,065$ million, up 6 per cent on the March quarter.

Balance on capital account (not seasonally adjusted). The balance on capital account recorded a net inflow of $\$ 1,920$ million, down $\$ 4,324$ million on the net inflow in the March quarter. The change was largely a result of decreases of $\$ 4,241$ million and $\$ 517$ million in the inflows due to net debt transactions and net equity transactions, respectively. Parly offsetuing these movements was a fall of $\$ 434$ million in the outflow on account of net "other" capital transactions.

## Financial year 1991-92 -

Balance on current account. In original terms, the balance on current account deficit was $\$ 11,861$ million,

GRAPH 2. CAPITAL ACCOUNT MAIN AGGREGATES

down $\$ 3,768$ million, or 24 per cent, on the deficit for 1990-91.

This fall in the deficit was due to:

- an increase of $\$ 1,015$ million, or 35 per cent, in the merchandise trade surplus (merchandise exports rose 5 per cent, while merchandise imports rose 3 per cent);
- a decrease of $\$ 767$ million, or 25 per cent, in the net services deficit; and
- a decrease of $\$ 2,184$ million, or 12 per cent, in the net income deficit.

These trade and income results were partly offset by a decrease of $\$ 198$ million, or 8 per cent, in the net unrequited transfers surplus.

Balance on capital account. The balance on capital account recorded a net inflow of $\$ 12,486$ million, down $\$ 3,415$ million on the net inflow for the previous financial year. The change was mainly the result of the fall of $\$ 10,958$ million, to $\$ 1,075$ million, in the net inflow from net equity transactions. Largely offsetting this fall were an increase of $\$ 6,179$ million, to $\$ 10,825$ million, in the net debt transactions inflow and a turnaround of $\$ 1,364$ million, to a net inflow of $\$ 586$ million, in net "other" capital transactions.

## Release date for September quarter 1992 issue

The expected release date for the September quarter 1992 issue of
Balance of Payments, Australia (5302.0) is Monday.

## NOTES ON THE ESTIMATES

## June quarter 1992 -

## Current account (seasonally adjusted)

"Volume" refers to values at average 1984-85 prices and "price" refers to implicit price deflators.

## Goods and services

The surplus on goods and services was $\$ 221$ million, down $\$ 64$ million (or 22 per cent) on the surplus recorded in the March quarter due to an increase of $\$ 92$ million in the net services deficit which more than offset the increase of $\$ 28$ million in the merchandise trade surplus.
In volume terms, exports of goods and services rose $\$ 970$ million ( 7 per cent), while imports of goods and services rose $\$ 846$ million ( 6 percent). The resulting increase of $\$ 124$ million in the surplus on goods and services makes a positive contribution of 0.2 percentage points to the June quarter 1992 expenditure based estimates of GDP at average 1984-85 prices. The merchandise trade surplus was up $\$ 184$ million while the net services deficit increased by $\$ 60$ million.

## Exports of merchandise

Exports of merchandise at current prices rose $\$ 635$ million, or 5 per cent, to $\$ 14,173$ million, as a result of an 8 per cent rise in volumes and a 3 per cent fall in prices.
Rural exports at current prices rose $\$ 92$ million, or 2 per cent, reflecting a 6 per cent rise in volumes and a 4 per cent fall in prices. Rises were recorded in:

- "other" rural, up $\$ 82$ million ( 6 per cent), due to a volume increase of 14 per cent that was substantially offset by a price fall of 7 per cent.
- meat, up $\$ 68$ million ( 8 per cent), due to a 7 per cent rise in volume and a 1 per cent increase in prices; and
- wool, up $\$ 58$ million ( 7 per cent), as a result of a 16 per cent increase in volume being partly offset by an 8 per cent fall in prices.
The largest fall was in sugar, down $\$ 105$ million ( 54 per cent), due almost entirely to a decrease in volume.

Non-rural exports at current prices rose $\$ 543$ million, or 6 per cent. While volumes increased by 8 per cent, prices fell 3 per cent. Rises occurred in six of the nine commodity groupings, the most significant being:

- "other" mineral fuels, up $\$ 270$ million (36 per cent), as a result of a 34 per cent increase in volume and a 2 per cent rise in prices;
- gold, up $\$ 258$ million ( 26 per cent), due to a 33 per cent increase in volume being partly off set by a fall in price; and
- "other" metals, up $\$ 50$ million (4 per cent), as a result of both volume and price rises.

The most significant fall was in "other" manufactures, down $\$ 76$ million ( 5 per cent), due almost entirely to a decrease in volume.

## Services credits

Services credits at current prices rose $\$ 151$ million ( 4 per cent) to $\$ 3,725$ million. Prices and volumes both rose by 2 per cent. At current prices the rise was mainly due to increased travel credits, while in volume terms, both travel and "other" services credits were significant contributors to the rise.

## Exports implicit price deflator

The implicit price deflator (IPD) for total exports of goods and services fell 2 per cent. On a fixed-weighted basis export prices were virtually unchanged from the March quarter, indicating that compositional change within exports of goods and services accounted for almost all of the fall in the IPD.

## Imports of merchandise

Imports of merchandise at current prices rose $\$ 607$ million ( 5 per cent) to $\$ 13,354$ million. Merchandise imports volumes rose 7 per cent while prices fell 2 per cent. Rises were recorded in four of the nine commodity groupings, with the most significant being:

- transport equipment, up $\$ 709$ million ( 46 per cent), due mainly to volume increases; and
- machinery, up $\$ 88$ million ( 2 per cent). Prices of machinery imports fell 8 per cent, while volumes increased by 11 per cent.

The most significant fall was in fuels, down $\$ 140$ million ( 19 per cent), due mainly to decreased volumes.
Exogenous imports rose $\$ 301$ million ( 31 per cent), mainly due to increases in imports of civil aircraft (in original terms, civil aircraft valued at $\$ 454$ million were imported in the June quarter, compared to no imports of this nature in the March quarter). Endogenous imports rose $\$ 306$ million or 3 per cent. The overall volume of endogenous imports rose 6 per cent, while prices fell 3 per cent. In terms of volumes, consumption goods rose 2 per cent, capital goods rose 15 per cent, and "other" goods rose 2 per cent.

## Services debits

Services debits at current prices rose $\$ 243$ million ( 6 per cent), to $\$ 4,323$ million, as a result of a 4 per cent rise in volume and a 2 per cent rise in prices. Apart from "other" transportation which rose marginally, the rise in both current prices and volume terms resulted from general increases in the services debits components.

## Imports implicit price deflator

The implicit price deflator (IPD) for imports of goods and services fell 1 per cent. On a fixed-weighted basis, prices were virtually unchanged, indicating that compositional change within imports of goods and services accounted for most of the fall in the IPD.

GRAPH 7. IMPLICIT PRICE DEFLATOR FOR GOODS AND SERVICES
based on seasonally adjusted data (1984-85=100)

## Terms of trade

Australia's terms of trade fell 1 per cent in the June quarter, resulting from the fall in the IPD for exports of goods and services exceeding that for imports of goods and services.

## Income

The net income deficit rose $\$ 744$ million ( 22 per cent) to $\$ 4,187$ million. Income credits fell $\$ 446$ million ( 36 per cent) to $\$ 790$ million (the lowest quarterly level since June quarter 1987), due mainly to a decrease in direct investment dividends and interest receivable from abroad.

Income debits rose $\$ 298$ million ( 6 per cent) due to increases in remitted profits and dividends payable abroad on direct investment by the non-official sector.

## Unrequited transfers

The net unrequited transfers surplus fell $\$ 58$ million (9 per cent) to $\$ 560$ million. Unrequited transfers credits were virually unchanged. Unrequited transfers debits rose 11 per cent, mainly reflecting increased transfers by the official sector.

## Capital account (not seasonally adjusted)

In original terms, the balance on capital account recorded a net inflow of $\$ 1,920$ million, down $\$ 4,324$ million on the net inflow in the March quarter. The decrease in this net inflow was largely due to falls of $\$ 4,241$ million (to $\$ 938$ million) and $\$ 517$ million (to $\$ 1,076$ million) in the net debt and net equity inflows, respectively. Parly offsetting these movements was a fall of $\$ 434$ million, to $\$ 94$ million, in the net ouflow auributable to net "other" capital transactions.

## GRAPH 10. NET CAPITAL TRANSACTIONS

By sector, the balance on capital account was comprised of:

- a net outflow of $\$ 1,822$ million in official sector transactions, a turnaround of $\$ 5,466$ million on the net inflow for the previous quarter; and
- a net inflow of $\$ 3,741$ million in non-official sector transactions, up $\$ 1,141$ million on the net inflow for the March quarter.
The change in official sector transactions resulted from:
- a turnaround of $\$ 3,129$ million, to a net outflow of $\$ 2,299$ million, in general government transactions; and
- a fall of $\$ 2,337$ million, to $\$ 477$ million, in the net inflow from Reserve Bank transactions.

The turnaround in general government transactions was mainly accounted for by the turnaround of $\$ 3,244$ million, to a net outflow of $\$ 2,391$ million, in foreign investment in Australia. This, in tum, was largely the result of an outflow of $\$ 3,943$ million in general govemment borrowing domiciled in Australia after an inflow of $\$ 518$ million in the March quarter.

Partly offseting changes included:

- an increase of $\$ 1,220$ million, to $\$ 1,608$ million, in the net inflow from State government borrowing domiciled abroad; and
- a turnaround of $\$ 115$ million, to a net inflow of $\$ 92$ million, in Australian investment abroad.

The fall in the net inflow from Reserve Bank transactions was due to lower sales of official reserve assets.

The change in non-official sector transactions was comprised of:

- a net inflow of $\$ 4,758$ million from foreign investment in Australia, up $\$ 2,949$ million on the March quarter, and
- a net outflow of $\$ 1,017$ million from Australian investment abroad, representing a tumaround of $\$ 1,808$ million on the previous quarter's net inflow.

The changes due to transactions in foreign investment in Australia in respect of the non-official sector were mainly the result of:

- portfolio investment in corporate equities, which turned around $\$ 1,230$ million to an inflow of $\$ 431$ million;
- borrowing from unrelated enterprises, which increased $\$ 1,027$ million to an inflow of $\$ 1,922$ million, due chiefly to a reduced outflow on public sector transactions; and
- borrowing from direct investors, which was up $\$ 701$ million to $\$ 1,655$ million.

A major offsetting movement occurred in direct investment in corporate equities which recorded a fall of $\$ 368$ million, to $\$ 822$ million, in the net inflow for the quarter.

The chief factors responsible for the change in Australian investment abroad were:

- bank lending to unrelated enterprises, which turned around $\$ 1,699$ million to an outflow of $\$ 1,664$ million;
- direct investment in foreign corporate equities, which turned around $\$ 1,037$ million to an outflow of $\$ 224$ million;
- net equity investment in branches, which recorded a net inflow of $\$ 66$ million, down $\$ 232$ million on the March inflow; and
- accounts receivable/prepayments made by the private sector from/to unrelated enterprises, which turned around $\$ 227$ million to an outflow of $\$ 95$ million.

The main offsetting movements occurred in direct investment lending, which turned around $\$ 1,068$ million to an inflow of $\$ 582$ million; non-bank enterprise lending to unrelated enterprises, which tumed around $\$ 524$ million to an inflow of $\$ 302$ million; and accounts receivable/prepayments made by the public sector from/to unrelated enterprises where the net inflow rose $\$ 243$ million, to $\$ 271$ million.

## Trade weighted index and US/\$A exchange rates

The trade weighted index at the end of June quarter 1992 was 55.2, down 5.8 per cent on the previous quarter. The Australian dollar fell 2.6 per cent against the US dollar to 0.7488 at the end of the quarter.

## Revisions

Apart from investment income, the current price (not seasonally adjusted) current account estimates in this publication are consistent with those published in the June 1992 issue of 5301.0, which was released on 30 July 1992.

Revisions have been made to investment income credits back to the September quarter 1991 and to income debits for the June quarter 1992, as a result of the incorporation of data from the June quarter 1992 Survey of Foreign Investment.

Revisions made to capital account estimates for the September, December and March quarters of 1991-92 were due to the receipt of more complete data from the March quarter 1992 Survey of Foreign Investment.

Table 30 shows revisions on an annual and quarterly basis since the March quarter 1992 issue of this publication.

## Special note on seasonal adjustment

Original data for the income credits series for March quarter 1992 includes a large irregular component; this was taken into account in compiling the seasonally adjusted series for income credits. Tables 3, 4, 5, 23 and 32 include this series.
Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series may be more clearly recognised. Seasonal adjustment procedures do not aim to remove the irrcgular or non-seasonal influences which may be present in any particular month, such as the effect of introducing new models, processing delays, or industrial disputes. Irregular influences that are highly volatile can make it difficult to interpret the movement of the series even after adjustment for seasonal variation.

## REVISED INTERNATIONAL STANDARDS FOR BALANCE OF PAYMENTS STATISTICS

## Introduction

This article previews the revised international standards for balance of payments statistics that are expected to be issued during 1993. International standards play an important role in most areas of official statistics.

In the area of balance of payments two international standards are pre-eminent, namely, the International Monetary Fund's Balance of Payments Manual (BPM) and the United Nations' A System of National Accounts (SNA). The first is designed to provide guidelines to balance of payments statisticians while the latter, guidelines to national accounts statisticians. The latest edition of the SNA was issued in 1968 while the latest edition of the BPM was issued in 1977.

Because of the close relationship between national accounts and the balance of payments the two international statistical standards agree on many fundamental economic concepts and definitions (e.g, the use of the double-entry system of accounting and the definitions of territory, economy, residents, valuation and time of recording of transactions). Nevertheless, there are some important differences, partly reflecting the time when the documents came into being (e.g., the $B P M$, issued in 1977, recognizes finance leases as financial assets, whereas the SNA, issued almost a decade earlier, does not). Other differences reflect different analytic interests underlying the national accounts and balance of payments statistics (e.g. the current SNA does not recognize reinvested earnings attributed to direct investors, whereas the BPM does).

## The role of international statistical standards

An international statistical standard generally represents an international consensus about the concepts, definitions, classifications, units of measure, and principles of valuation and timing that ought to be used in a certain body of statistics. It provides the national statistician with a conceptual framework, within which to develop national statistics. In so far as national statisticians follow the relevant international statistical standard, national statistics may be aggregated to form world totals and inter country comparisons are possible.

The extent to which countries conform to a particular international statistical standard varies. First, some of the concepts and treatments recommended in a particular international standard may not apply to a particular country and therefore may be ignored. Second, as there is usually a long delay between issues of an international statistical standard, new activities may emerge that are not addressed in the standard and these may not be treated consistently by national statisticians; when the international statistical standard is updated it may not be easy for national statisticians to change their treatment. Third, there may be a national preference (guided by national users) in
a particular country to treat certain transactions in a particular way. Fourth, the data source from which the data are compiled in a particular country may not reflect the concepts in the international statistical standard. Finally, differences between international statistical standards may result in a country following one standard rather than another. For example, in Australia's case the balance of payments capital account classification gives prime recognition to institutional sector rather than type of capital (direct investment, portfolio investment, other capital and reserves), although type of capital is the emphasis recommended by the $B P M$. This is done to align the balance of payments more closely with the Australian national accounts; the latter are based upon the SNA, which does not recognize the type of capital classification and places emphasis on the institutional sector classification.

In recent years both the SNA and the BPM have undergone reviews and new editions of each should be published in 1993. Underpinning this work has been a concerted endeavour to harmonize the SNA and other international statistical standards, including the BPM.

## The draft revised edition of BPM

The IMF circulated a draft revised edition of the BPM to national balance of payments statisticians in late 1991 to seek their comments. The scope of the draft BPM differed in a number of significant ways from the current version of the $B P M$.

## (a) Scope extended to include the stock of external assets and liabilities

The scope of the draft BPM has been extended to include both balance of payments flows (transactions) and the slock of extemal financial assets and liabilities (international investment position). This may surprise Australian balance of payments users who have had both stocks and flows data for some years, but it illustrates how international statistical standards may lag behind national statistical initiatives. The current edition of the BPM mentions the international investment position statement only once and by no means articulates a framework for it.

The draft $B P M$ identifies the following data items: transactions (in goods, services, income, transfers and financial assets), valuation changes (separate items are required for price changes and exchange rate changes), other changes in position during a period, and the positions at the beginning and end of a period. The balance of payments statement includes transactions while the international investment position statement includes the positions at the beginning and end of a period. Valuation and other changes are included in the reconciliation items which reconcile transactions and positions.

## (b) Coverage confined to transactions

In formulating a clear demarcation between transactions and other changes to positions, the draft BPM restricts the coverage of the balance of payments statement to transactions; items such as the allocation/cancellation of Special Drawing Rights and the monetisation/demonetisation of gold are to be treated as "other changes" (i.e., reconciliation items) in the intemational investment position statement.

## (c) Harmonization with the SNA

In the draft BPM the linkages between the balance of payments and international investment position statements and the rest of the world account and balance sheets of the SNA have been strengthened and harmonized to the maximum extent possible. In many cases the treatments in the two systems have been made identical (e.g., treatment of exports and imports of goods and services, reinvestment of earnings on direct investment, and financial leasing). Even though differences between the BPM and the SNA still exist, due to differences of focus and use, the draft $B P M$ clearly articulates the relationship between the two documents and illustrates the linkages (or data items required) to harmonize the balance of payments and national accounts. The harmonization and reconciliation of the two international statistical standards also facilitates integration of the $B P M$ with other international statistical standards.

## (d) Revised list of standard components

The list of standard components in the draft BPM has been revised and extended. It is generally considered to be clearer and more analytically useful than the list in the current BPM.

Unlike the current $B P M$, goods, services and income are clearly separated. The components within each category are currently under review by the IMF in the light of national views, SNA proposals, OECD-EUROSTAT proposals on classification of international trade in ser-
vices, and the United Nations' proposed Central Product Classification. In addition, the investment income classification in the draft has been more clearly aligned with the corresponding capital account and international investment position classifications and the classification of transfers has been modified to distinguish between capital and current transfers, as identified in the SNA. For the capital account, some major changes in coverage and classification are being contemplated.

## (e) Regional classification

Unlike the current $B P M$, the draft includes standards for compiling regional balance of payments statistics.

## Implications for Australia

Australia has supported and contributed to the work on revising the SNA and the BPM. The ABS has provided extensive comments on drafts of each document and has been a strong advocate of harmonization in international statistical standards.

While Australia's statistics already reflect many of the changes recommended in the draft $B P M$, particularly in the area of intemational investment position statistics, much work needs to be done to assess the implications of fully adopting the revised BPM in Australia's balance of payments and international investment statistics. Once the revised standards are published, the ABS will undertake a program of work designed to evaluate the implications of adoption of the standards, from both an analytical and practical perspective, with the objective of implementing the recommendations to the extent considered appropriate. Some recommendations may be implemented by changing the presentation of the existing series. Other recommendations may require the revamping of existing collections or the introduction of new ones.

It is envisaged that implementing the recommendations of the revised BPM will be achieved progressively. Users will be consulted at each significant step of the process.

## MERCHANDISE TRADE WITH SELECTED COUNTRIES

In the last year, the ABS has published three feature articles which focus on Australia's merchandise trade with major trading partners. These have appeared in various issues of the quarterly publication Foreign Trade, Australia: Merchandise Exports and Imports by Country (Cat No 5422.0). The articles and the issues in which they appeared are:

## Title

Australia's merchandise trade with selected Asian countries

Australia's merchandise trade with the European Community
Australia's merchandise trade with the USA - a dual perspective.

## Issue

June quarter 1991

September quarter 1991

March quarter 1992

The first two of these articles are similar in format. Each begins by providing an historical perspective on the importance of the group of countries as trading partners of Australia; it then looks at the share of Australia's total trade, for the five years 1986-87 to 1990-91, represented by each group member, finally, it provides a brief analysis of the commodity pattem of trade with individual countries.

The focus of the third article is a litte different. It begins by placing Australia in the context of the USA's top ten trading partners and vice versa. It goes on to analyse the commodity patuern of trade between Australia and the USA over the five years 1987 to 1991, and to describe the importance of the major commodities traded in terms of the total trade with the partner country and in terms of each country's total trade in those commodities.

To assist analysis of Australia's bilateral trade flows where both Australian and partner country data are being used, the ABS published a feature article titled Merchandise Export and Import Statistics by Country - Factors Affecting Bilateral Reconciliations in the June 1991 issue of Australian Economic Indicators (Cat No 1350.0). This article describes how asymmetries in recording bilateral trade flows can arise and explains some of the differences between statistics published by the ABS and those published by individual partner countries.

Reprints of any of these articles can be obtained, at $\$ 5$ each, from Trevor Jolly (telephone 06-2526820). If you wish them to be faxed to you, charges will be at current Australia Post rates.

TABLE 1. BALANCE OF PAI MFNTS - SUMMARY

(a) Quartedy figures are derived from seasonally adjustod data. (b) The fixed-weightod indexes are derived by combining individual component prices (base year 1984-85 100 ) with a weighting to reflect the relative importance of the components in the base year. (c) Derived by dividing the implicit price deflator (IPD) for merchandise exports fob by the IPD for merchandise imports fob. (d) Derived by dividing the IPD for services, credits by the IPD for services, debits. (e) Derived by dividing the IPD for wotal expors of goods and services by the IPD for total exports of goods and services by the IPD for total imports of goods and services. (f) Derived by smoothing the terms of trade series using a tailored seven term Henderson moving average.

## Introduction

This publication provides detailed estimates of Australia's balance of payments for the June quarter 1992 together with revised estimates for previous quarters and financial years. Longer term estimates, from September quarter 1959, consistent with those shown in this issue, will shortly be made available on request for a charge.
2. Tables 1 to 6 in this publication provide summary statistics; they show the main aggregates and the more important components of these aggregates and include, in addition, trend estimates and percentage changes in the seasonally adjusted estimates of the current account. The remaining tables, Tables 7 to 32, provide additional breakdowns, related series (e.g. exchange rates and the tradeweighted index), reconciliations of selected balance of payments series with other series (i.e. with foreign trade statistics and levels of official reserve assets), historical data on selected balance of payments aggregates and other analytical information.

## Concepts, sources and methods

3. Descriptions of the underlying concepts and structure of the balance of payments and the sources and methods used in compiling the estimates are presented in Balance of Payments, Australia: Concepts, Sources and Methods (5331.0). The publication also provides item definitions, explanations of seasonal adjustment, constant price estimates, implicit price deflators and the terms of trade; and an analysis of the quality of the estimates.

## Commodity breakdowns of merchandise

4. Commodity breakdowns of merchandise exports and imports are provided in Table 11 (at current prices), 12 (at average 1984-85 prices), 13 (at current prices, seasonally adjusted) and 14 (at average 1984-85 prices, seasonally adjusted). The groupings shown are based on the third revision of the United Nations Standard International Trade Classification (SITC rev 3) as follows:

## Exports

Rural -
Meat \& meat preparations
Cereal grains and cereal preparations
Sugar, sugar preparations \& honey
Wool and sheepskins
Other nural

## SITC rev 3 Section or Division

 26(part),29,4Non-rural -
Metal ores \& minerals 27,28
Mineral fuels -
Coal, coke and briquettes
32
Other mineral fuels
33 to 35
Metals -
Gold

Exports (cont.)
Other metals
Machinery
Transport equipment
Other manufactures
Other non-rural

## Imports

Food, beverages \& tobacco $\quad 0,1$
Fuels3

Chemicals (incl. plastics) ..... 5
Textiles, fabrics etc 65

Metals and metal manufactures 67 to 69
Machinery 71 to 77
Transport equipment
78,79
Other manufactures
61 to 64,66,8
Other imports
$2,4,9$
Note: Division 98 is not part of the SITC. In the balance of payments it comprises confidential items, which are removed from their actual division and combined in Division 98 to prevent disclosure of their values.

## Seasonal adjustment

5. Most of the current account series in this publication are affected to some extent by seasonal influences and it is useful to recognise and take account of this element of variation. However, seasonally adjusted statistics in this publication should not be regarded as in any way definitive as results from seasonal adjustment vary according to the method used.
6. The factors to be used in compiling seasonally adjusted estimates for certain series (principally components of merchandise trade and investment income) up to and including December quarter 1992 can be obtained, for a charge, from Mr Trevor Jolly on Canberra (06) 2526820.

## Trend estimates

7. The trend estimates are derived by applying a 7 -term Henderson moving average to the seasonally adjusted series. The 7 -term Henderson average (like all Henderson averages) is symmetric, but as the end of a time series is approached, asymmetric forms of the average are applied. Unlike the weights of the standard 7-term Henderson moving average, the weights employed here have been tailored to suit the particular characteristics of individual series. While the asymmetric weights enable trend estimates for recent quarters to be produced, it does result in revisions to the estimates for the most recent three quarters as additional observations become available. There may also be revisions because of changes in the original data and as a result of the re-estimation of the seasonal factors. Details of trend-cycle weighting patterns are available on request from the Supervisor, Time Series Analysis, on (06) 2526345.

## Accuracy and reliability of estimates

8. Because the transactions recorded in the balance of payments are of many different kinds, compilation of balance of payments estimates entails the use of a very
wide range of statistical data of varying degrees of accuracy and timeliness.
9. Therefore care should be exercised in the use and interpretation of estimates in this publication. The latest estimates are preliminary and subject to revision as more accurate data come to hand. Also, the more detailed estimates may be less accurate in relative terms than broader items and aggregates of which they form components.

## Investment income and capital transactions

10. Additional information about capital account and investment income transactions is available in the quarterly publication International Investment Position, Australia (5306.0) and in the annual publication International Investment Position, Australia (5305.0). Statistics in international investment publications are consistent with those in balance of payments publications. International investment publications also provide comprehensive statistics on the level of foreign investment in Australia, the level of Australian investment abroad and Australia's external debl.

## Transportation transactions

11. Additional information on freight and other transportation transactions is available on request for a charge from Mr. John Rattur on (06) 2525738.

## Comparability with capital expenditure statistics

Tables 11 and 13 in this publication contain current price estimates of imports of endogenous capital goods. Shorter-term movements in this series can differ quite significantly from the corresponding movements in the new private capital expenditure on equipment, plant and machinery series published in Private New Capital Expenditure, Australia (5625.0 and 5626.0). The main reasons for the differences are:

- The imports series includes all goods defined as endogenous capital goods, whereas the capital expenditure series relates only to goods classified as equipment, plant and machinery that are acquired by private enterprises in selected industries.
- The capital expenditure series includes all plant, machinery and equipment, irrespective of whether it has been imported or manufactured in Australia.
- Imports are valued f.o.b. at the point of export whereas estimates of capital expenditure are measured at domestic market prices, including international transport margins, government duties and domestic trade and transport margins.

12. Accordingly, while movements in imports of endogenous capital goods can provide a broad indication of movements in the import component of new private capital expenditure on equipment, plant and machinery, they do not necessarily provide an accurate indication of movements in total new private capital expenditure on these goods.

## Series available on request

13. Detailed quarterly export and import series at constant (average 1984-85) prices can be obtained by contacting Mr Stephen Waugh on Canberra (06) 252 6716. These series are based on foreign trade statistics (ie they are not adjusted to a balance of payments basis) and relate to selected divisions and sections of the SITC rev 3. Quarterly tables showing components of services can also be obtained from Mr Waugh. These tables provide original and seasonally adjusted current and constant price estimates, corresponding to the series shown (in original current price terms) in Tables 17 and 18 of this publication. Both sets of estimates are working estimates only and may not always be completely consistent with published estimates.

## Related publications

14. Other ABS publications which may be of interest include:

Balance of Payments, Australia (5301.0) - issued monthly Balance of Payments, Australia (5303.0) - issued annually
Balance of Payments, Australia: Concepts, Sources and Methods (5331.0)

Information paper - Seasonal Adjustment of Australia's Monthly Balance of Payments Statistics (5359.0).
Foreign Trade, Australia: Merchandise Exports (5432.0) issued monthly

Foreign Trade, Australia: Merchandise Imports (5433.0) issued monthly

Export Price Index, Australia (6405.0) - issued monthly
Import Price Index, Australia (6414.0) - issued quarterly
International Investment Position, Australia (5305.0) issued annually

International Investment Position, Australia (5306.0) issued quarterly

Foreign Investment, Australia: Summary of Concepts, Sources and Methods (5355.0).
15. Current publications produced by the ABS are listed in the Catalogue of Publications, Australia (1101.0). The ABS also issues, on Tuesdays and Fridays, a Publications Advice (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

## For more information ...

The ABS publishes a wide range of information on Australia's economic and social conditions. A catalogue of publications and products is available from any of our Offices (see below for contact details).

## Information Consultancy Service

Special tables or in-depth data investigations are provided by the ABS Information Consultancy Service in each of our Offices (see below for contact details).

## Electronic Data Services

A growing range of our data is available on electronic media. Selections of the most frequently requested data are available, updated daily, on DISCOVERY (Key *656\#). Our Telestats service delivers major economic indicator publications ready to download into your computer on the day of release. Our PC-Ausstats service enables on-line access to a data base of thousands of up-to-date time series. Selected datasets are also available on diskette or CD-ROM. For more details on our electronic data services, contact Information Services in any of our Offices on the numbers below.

## Bookshops and Subscriptions

There are over 500 titles available from the ABS Bookshops in each of our Offices. You can also receive any of our publications on a regular basis. Join our subscription mailing service and have your publications mailed to you in Australia at no additional cost. Telephone our Publications Subscription Service toll free on 008020608 Australia wide.
