## EXPLANATORY NOTES

## Introduction

The monthly population survey (which is described in The Labour Force, Australia (6203.0)) comprises the monthly Labour Force Survey and supplementary topics. These tables contain some results of a supplementary survey run in association with the August 1994 Labour Force Survey conducted throughout Australia.
2. Those respondents to the Labour Force Survey who fell within the scope of the supplementary survey were asked additional questions about their weekly earnings and frequency of pay.

## Scope

3. The scope of this supplementary survey was the same as that used for the Labour Force Survey (described in full in The Labour Force, Australia (6203.0)), except that it was restricted to persons who were employees in their main job excluding persons who worked solely for payment in kind.

## Coverage

4. In the population survey, coverage rules are applied which aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection. See The Labour Force, Australia (6203.0) for more details.

## Definitions

5. Definitions of labour force and demographic classifications appearing in these tables are given in The Labour Force, Australia (6203.0).
6. Unless otherwise stated, all characteristics referenced in these tables relate to the week before the interview (i.e. the reference week).

## Results of the survey

7. The estimates in these tables refer to information collected in the survey month and, due to seasonal factors, may not be representative of other months of the year.
8. Results of similar surveys, conducted annually since August 1975, have been given in issues of the discontinued publication Weekly Earnings of Employees (Distribution), Australia (6334.0).
9. A brief analysis of statistics from this survey, and a set of summary tables were published in the December 1994 issue of The Labour Force, Australia (6203.0).
10. This Standard Data Service replaces the discontinued publication. The Standard Data Service is available on subscription or request. Inquiries should be made to the contact in the Phone Inquiries box on the Contents page.
11. It is expected that this survey will be conducted next in August 1995.

Comparison with Average Weekly Earnings, States and Australia (6302.0)
12. The survey was conducted primarily to obtain statistics on the distribution of eamings of employees classified by characteristics such as marital status, sex, age and whether the earnings came from the main job or a second job. Caution should be exercised when comparing the means (averages) in these tables with estimates of average weekly earnings included in the quarterly publication Average Weekly Earnings, States and Australia (6302.0) which are compiled from a survey of employers. There are important differences in the scope and methodology of the two surveys.
13. The quarterly Survey of Average Weekly Earnings excludes employees in the industries of Agriculture, Forestry and Fishing (ANZSIC Division A) and Private Households Employing Staff (ANZSIC Sub-division 97) both of which are included in this household survey. Data from the quarterly Survey of Average Weekly Earnings are collected from employers who fill in a mailed questionnaire giving details of their employees' weekly eamings. For this household survey, respondents are either interviewed personally at their dwelling or another adult member of their household responds on their behalf.
14. The methodology used in this household survey is associated with sources of non-sample error not found in surveys of employers which may also explain some of the differences between the results of the two surveys.

## Discontinuities in the series

15. The estimates for this survey are not strictly comparable with those obtained from the August 1990 survey. In August 1990, the survey excluded persons aged 70 and over. The scope of the surveys since 1991 and surveys rum prior to August 1990 included all persons aged 15 and over.
16. Care should be taken when comparing the movements in mean weekly earnings between 1990 and 1991, and between 1991 and 1992 with movements between other years. There was an elapsed time of eleven months (August 1990 to July 1991) and thirteen months (July 1991 to August 1992) between repeats of the survey. The usual period between surveys is twelve months.

## Sample size

17. In previous years this supplementary survey has been conducted on the full sample of dwellings selected in the Labour Force Survey. For August 1994 this has been restricted to $7 / 8$ ths of the full sample size. As a result, the standard errors for this survey differ from those applicable to previous surveys.

## Changes in industry classification

18. From August 1994, industry data are classified according to the Australian and New Zealand Standard Industrial Classification (ANZSIC), a detailed description of which appears in ANZSIC 1993 (1291.0). Like the previous Australian Standard Industrial Classification (ASIC), ANZSIC classifies businesses according to their economic activities, in a structure consisting of four levels (Division, Sub-division, Group and Class).

For further details, refer to The Labour Force, Australia (6203.0).

## Changes in families classifications

19. The Relationship in household classification has been introduced to align with recently established ABS standards. Most categories in the new classification remain comparable with categories in the previous classification, Family Status. The cases in which there are breaks in comparability are discussed in the following paragraphs.
(a) Lone parents (previously referred to as Sole parents) now includes parents with non-dependent children (provided those children are without a spouse or children of their own).
(b) Dependent students (previously Full-time students aged 15-24) now comprise sons or daughters (of a couple or a lone parent) aged 15 to 19 attending school or aged 15 to 24 attending a tertiary educational institution full time. Other related full-time students, who were also previously classified as Full-time students aged $15-24$ are now included in Other family persons.
(c) Other family persons now comprises the previous groups:

- Other family head (excluding those now counted as Lone parents)
- Other related full-time students (previously classified as Full-time students aged 15-24) and;
- Other relative of married couple or family head.

For further details refer to The Labour Force, Australia (6203.0).

## Estimation procedure

20. The estimates of employees aged 15 years and over are derived from the population survey by use of a ratio estimation procedure, which ensures that the estimates conform to an independently estimated distribution of the population for each capital city and remainder of State by age, sex and labour force status, rather than to the corresponding distribution within the sample itself.

## Reliability of the estimates

21. Estimates in these tables are subject to sampling and non-sampling errors. For more information refer to the Technical Notes section.
22. Care should be exercised with regard to the estimates of weekly earnings provided in these tables. The collection methodology used may have had some effect on the reporting of weekly earnings information. In particular, the apparent irregularity in the numbers of persons reporting weekly earnings in the range of $\$ 1040$ to $\$ 1080$ may be due to the data collection technique used.

## Related publications

23. Other ABS publications which may be of interest include:

The Labour Force, Australia (6203.0) - issued monthly
Average Weekly Earnings, States and Australia (6302.0) issued quarterly

Distribution and Composition of Employee Earnings and Hours, Australia (6306.0) - issued annually

Survey of Income and Housing Costs and Amenities, Persons with Earned Income, Australia (6546.0) - issued irregularly

Employed Wage and Salary Earners, Australia, (6248.0) - issued quarterly

Award Rates of Pay Indexes, Australia (6312.0) - issued monthly

## Related surveys

24. Other supplements to the monthly Labour Force Survey which may be of interest include:

Employment Benefits, Australia (6334.0) - conducted biennially

Trade Union Members, Australia (6325.0) - conducted biennially

Working Arrangements, Australia (6342.0) - conducted biennially

Career Experience, Australia (6254.0) - conducted three yearly
25. Statistical tables from the above surveys are now available as a Standard Data Service by subscription or on request. Inquiries should be made to the contact in the Phone Inquiries box on the Contents page. Customers will also be advised of the forthcoming release of Standard Data Services.

## Symbols and other usages

* subject to sampling variability too high for most practical uses. See the Technical Notes section for details
. . not applicable

26. Because estimates have been rounded, discrepancies may occur between sums of the component items and totals.

## TECHNICAL NOTES

Since the estimates in these tables are based on information obtained from occupants of a sample of dwellings, they are subject to sampling variability, that is, they may differ from those that would have been produced if all dwellings had been included in the survey. One measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included. There are about two chances in three that a sample estimate will differ by less than one standard error from the number that would have been obtained if all dwellings had been included, and about nineteen chances in twenty that the difference will be less than two standard errors. Another measure of the likely difference is the relative standard error, which is obtained by expressing the standard error as a percentage of the estimate.
2. Space does not allow for the separate indication of the standard errors of all estimates in these tables. A table of standard errors applicable to persons estimates is given on the following page. Since they are averages based on calculations for a limited number of past surveys over a wide range of labour force characteristics these numbers will not give a precise measure of the standard error of a particular estimate but they will provide an indication of its magnitude.
3. An example of the calculation and the use of standard errors in relation to estimates of persons is as follows. Table 5 shows the estimated number of females who in August 1994, were part-time employees in main job was $1,230,700$. Since this estimate is between $1,000,000$ and $2,000,000$, the table below shows that the standard error for Australia will be between 12,600 and 16,300 in the standard error table and can be approximated by interpolation as 13,500 (rounded to the nearest 100). Therefore, there are about two chances in three that the value that would have been produced if all dwellings had been included in the survey will fall in the range $1,217,200$ to $1,244,200$ and about nineteen chances in twenty that the value will fall within the range $1,203,700$ to $1,257,700$. This example is illustrated in the following diagram.

4. The relative standard errors of estimates of mean and median weekly earnings are obtained by first finding the relative standard error of the estimate of the total number of persons contributing to the estimate and then multiplying the figure by the following relevant factors:

Mean weekly earnings

- Part-time workers 0.8
- Full-time workers 0.8
- All employees 0.8

Median weekly eamings

- Part-time workers 0.5
- Full-time workers 0.3
- All employees 0.4

5. An example of the calculation of standard errors by the use of the above factors is as follows:

Table 5 shows the estimate of median weekly earnings of female part-ime employees in August 1994 was $\$ 215$ and the estimate of total number of employees contributing to this estimate was $1,230,700$. The standard error of this estimate $(1,230,700)$ is about 13,500 so the relative standard error is about 1.1 per cent. The relative standard error of the estimate of median weekly earnings is calculated by multiplying this figure (1.1) by the appropriate factor shown in the previous paragraph (in this case 0.5 ) :1.1 x $0.5=0.6$ per cent. The standard error of this estimate of median weekly eamings is therefore 0.6 per cent of $\$ 215$, i.e. about \$1.29. Therefore, there are about two chances in three that the median weekly earnings of female part-time workers would fall within the range $\$ 213.71$ to $\$ 216.29$, and about nineteen chances in twenty that they would fall within the range $\$ 212.42$ to $\$ 217.58$.
6. As can be seen from the standard error table, the smaller the estimate the higher is the relative standard error. Very small estimates are thus subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In these tables, only estimates with relative standard errors of 25 per cent or less and percentages based on such estimates are considered sufficiently reliable for most purposes. However, estimates with larger relative standard errors have been included and are preceded by an asterisk (e.g. *3.5) percentage to indicate they are subject to high standard errors and should be used with caution.
7. Proportions and percentages formed from the ratio of two estimates are also subject to sampling errors. The size of the error depends on the accuracy of both the numerator and the denominator. A formula to approximate the relative standard error (RSE) of a proportion is:

$$
\operatorname{RSE}(x / y)=\sqrt{[\operatorname{RSE}(x)]^{2}-[\operatorname{RSE}(y)]^{2}}
$$

8. Considering the example from paragraph 3 above, $1,230,700$ female part-time employees represented 42.5 per cent of the $2,899,000$ female employees in August 1994. The standard error of $2,899,000$ is approximately 18,200 so the relative standard error is 0.6 per cent. The relative standard error for $1,230,700$ is 1.1 per cent. Applying the above formula, the relative standard error of the proportion is $\sqrt{(1.1)^{2}-(0.6)^{2}}$ or 0.9 per cent, giving a standard error for the proportion ( 42.5 per cent) of 0.4 percentage points. Therefore, there are about two chances in three that the proportion of female employees who worked on a part-time basis in August 1994 is between 42.1 per cent and 42.9 per cent and nineteen chances in twenty that the proportion is within the range 41.7 per cent to 43.3 per cent.
9. Published estimates may also be used to calculate the difference between two survey estimates (of numbers or percentages). Such an estimate is subject to sampling error. The sampling error of the difference between two estimates depends on their standard errors and the relationship (correlation) between them. An approximate standard error (SE) of the difference between two estimates ( $\mathrm{x}-\mathrm{y}$ ) may be calculated by the following formula:

$$
\operatorname{SE}(x-y)=\sqrt{[\operatorname{SE}(x)]^{2}+[\operatorname{SE}(y)]^{2}}
$$

While this formula will only be exact for differences between separate and uncorrelated characteristics or subpopulations it is expected to provide a good approximation for all differences likely to be of interest in these tables.
10. The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by interviewers and respondents and errors made in coding and processing data. Inaccuracies of this kind are referred to as the non-sampling error, and they may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

## GLOSSARY

Casual employees in main job: employees who were not entitled to either annual leave or sick leave.

Dependants: all family members under 15 years of age; all sons or daughters aged 15 to 19 attending school or aged 15 to 24 attending a tertiary educational institution full time, except those classified as husbands, wives or lone parents.

Employees: employed persons aged 15 years and over who worked in their main job for an employer for wages or salary or in their own business (either with or without employees), if that business was a limited liability company.

Family: Two or more related persons (relationship includes relationships by blood, marriage or adoption) usually resident in the same household at the time of the survey. A family comprises a married couple or a family head as defined, together with any persons having any of the following relationships to them:
(a) sons or daughters of any age, if not married and with no children of their own present;
(b) other relatives if not accompanied by a spouse, sons or daughters, or parents of their own; or
(c) any children under 15 years of age who do not have a parent present.

Further details on the determination of family relationships are given in The Labour Force, Australia (6203.0).

Full-time employees in main job: all employees for whom 'full-time' was the response to the question 'Is your main job full-time or part-time?'

Full-time workers: employees who usually worked a total of 35 hours or more a week in all jobs and others who usually work less than 35 hours a week but worked 35 hours or more during the reference week.

Hours paid for in main job: the number of hours for which employees were paid, not necessarily the number of hours actually worked during the reference week (e.g. an employee on paid leave for the week was asked to report the number of hours for which they were paid).

Hours worked: the number of hours actually worked during the reference week.

Industry: unless otherwise specified all occurrences of industry in these tables refer to Industry Division as defined by the Australian and New Zealand Standard Industrial Classification (ANZSIC) 1993, and relate to main job. However, unpublished industry data is available at Industry Group level.

Main English-speaking countries: the United Kingdom, Ireland, Canada, the United States of America, New Zealand and South Africa.

Main job: the job in which most hours were usually worked.

Mean weekly earnings: the amount obtained by dividing the total earnings of a group by the number of employees in that group.

Median weekly earnings: the amount which divides the distribution of employees into two equal groups, one having earnings above and the other below that amount. Medians were calculated from grouped data, the class intervals in some cases being finer than those published in the tables. Linear interpolation was used within the class interval which contained the median.

Occupation: unless otherwise specified all occurrences of occupation in these tables refer to Major Group as defined by the Australian Standard Classification of Occupations (ASCO), 1986.

Part-time employees in main job: all employees for whom 'part-time' was the response to the question 'Is your main job full-time or part-time?'

Part-time workers: employees who usually worked a total of less than 35 hours a week in all jobs and who did so during the reference week.

Permanent employees in main job: employees who were entitled to annual leave or sick leave in their main job.

Second job: a job, other than the main job, in which some hours were worked during the reference week. A person who held more than one job is classified to the industry and occupation of the main job. Service in the reserve defence forces is not regarded as a second job. Persons who by the nature of their employment worked for more than one employer, e.g. domestics, odd-job workers, baby-sitters, are not counted as having a second job unless they also held another job of a different kind, nor are those who worked for more than one employer solely by reason of changing jobs during the reference week.

Sector of main job: is used to classify a respondent's employer as a public or private enterprise. Public sector includes local government anthorities, government departments, agencies and authorities created by, or reporting to, the Commonwealth and State parliaments. In August 1994 there were 40,400 persons for whom sector could not be determined. These persons were included in the private sector for the purpose of these tables.

Size of location: the number of persons employed at the location of the respondent's main job.

Weekly earnings: amount of 'last total pay' from wage and salary jobs prior to the interview (i.e. before taxation and other deductions had been made). For persons paid other than weekly, earnings were converted to a weekly equivalent. No adjustment was made for any back payment of wage increases or pre-payment of leave, etc.

## SPECIAL DATA SERVICES

## DATA ITEMS AND HOW TO ORDER SPECIAL TABLES FROM THOS SURVEY

The ABS offers a range of unpublished data from this survey upon request. When ordering special tables from this survey, please ensure you identify the population(s) and the data item(s) which you require.

This section specifies the data items, categories and populations which relate to the survey and includes an order form for special tables. More detailed breakdowns of some data items are available on request.
The population(s) for a particular data item refers to the persons in the survey to whom the data item relates.
Refer to the glossary section and The Labour Force, Australia (6203.0) for definitions of data items.

## POPULATIONS

## POPULATION 1: Employees

POPULATION 2: Employees who worked full-dime in their main job
POPULATION 3: Employees who were full-time workers
POPULATION 4: Employees who worked full-time in their main job who were bom overseas
POPULATION 5: Employees who worked as an employee in the reference week in their second job

## SPECIAL DATA REQUESTS <br> WEEKLY EARNINGS, AUGUST 1994

Please specify your special data request(s) on the order form provided on the following page.
The following points should be noted when requesting special tables:

1. Table requests will be available on computer printout, floppy disk or microfiche.
2. The current cost of special tables is as follows -

| No. of data items <br> (excluding populations) | Cost per table (\$) |
| :---: | :---: |
| 2 | 120 |
| 3 | 150 |
| 4 | 225 |
| 5 | 330 |
| 6 or more | negotiable |

NOTE: Prices quoted are subject to revision.
3. Return the completed SPECIAL DATA REQUEST ORDER FORM to -

Assistant Director
Labour Force Supplementary Surveys
Australian Bureau of Statistics
PO Box 10
Belconnen ACT 2616
or
Facsimile No. (06) 2527784
4. The invoiced cost is payable in full within 28 days of receipt of data.
5. Any inquiries about this order should be directed to Mr Michael Jones on (06) 2526503.
