## SUMMARY OF FINDINGS

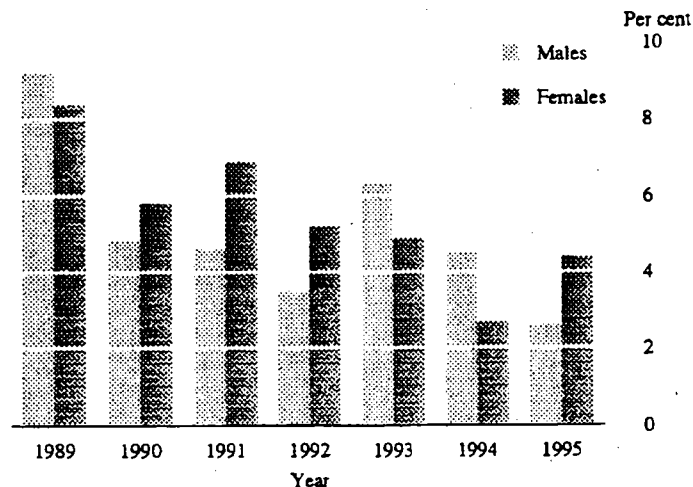

A survey measuring the distribution of employees' weekly earnings was conducted in August 1995 as a supplement to the Monthly Labour Force Survey. The survey was held amongst persons who were employees (wage and salary earners) in their main job (see Explanatory Notes and Glossary sections).

### EMPLOYEES, MEAN WEEKLY EARNINGS IN ALL JOBS, AUGUST 1988 TO AUGUST 1995

Mean weekly earnings (in all jobs) of male full-time workers increased by 2.6% between August 1994 and August 1995, from \$656 to \$673. This percentage increase was smaller than that for the previous year (4.5%) which in turn was smaller than the average (5.7% per year) for the previous five year period from August 1988 to August 1993.

For female full-time workers, earnings (in all jobs) increased by 4.4%, from \$527 to \$550 in the 12 months to August 1995. While this percentage increase was higher than that for the previous 12 months (2.7%), it was still smaller than the average (6.2% per year) for the five year period from August 1988 to August 1993.

DIAGRAM 1. ANNUAL PERCENTAGE INCREASE IN MEAN WEEKLY EARNINGS OF FULL-TIME WORKERS, AUGUST 1989 TO AUGUST 1995

Source: Table 1

In August 1995, full-time workers who were usual residents of the Australian Capital Territory had the highest mean weekly earnings of the States and Territories at \$724, while Queensland recorded the lowest estimate at \$588. Over the period August 1988 to August 1995, mean weekly earnings in the Northern Territory increased the least (3.2% per year), while the highest increases were recorded in Victoria and New South Wales (both 5.3% per year) (Table 1).

The proportion of employees working part time increased over the seven years to August 1995 from 19% of workers in August 1988 to 25% in August 1995. Some 42% of female employees and 11% of male employees were part-time workers in August 1995 (Table 2).

The mean weekly earnings for female part-time workers has increased from \$185 in August 1988 to \$237 in August 1995, an increase of 3.6% per year. For male part-time workers, the increase was 3.3% per year from \$167 in August 1988 to \$210 in August 1995 (Table 1).

DIAGRAM 2. MEAN WEEKLY EARNINGS OF PART-TIME WORKERS, AUGUST 1988 TO AUGUST 1995

Source: Table 1

EMPLOYEES IN MAIN JOB

Of Australia's 6,882,200 employees in August 1995, almost three-quarters (5,104,600) were full-time employees in their main job. Some 88% (3,335,800) of male and 57% (1,768,700) of female employees were full-time employees. The mean weekly earnings in main job of full-time employees were \$672 for males and \$550 for females. The distribution of earnings for full-time employees shows a higher median for males than females (\$594 compared with \$508) and shows males have higher proportions in all earnings ranges above \$560 per week.

The top 20% of male full-time employees earned \$869 or more per week, compared with \$699 or more for females. Earnings of the lowest 20% of full-time employees were \$426 or less per week for males and \$382 or less for females.

DIAGRAM 3. DISTRIBUTION OF WEEKLY EARNINGS OF FULL-TIME EMPLOYEES IN MAIN JOB, AUGUST 1995

Source: Table 5

There were a further 442,100 males and 1,335,600 females who were part-time employees in their main job whose mean weekly earnings in main job were \$229 and \$239, respectively. Median weekly earnings in main job of part-time employees were \$164 and \$217 for males and females, respectively.

The top 20% of male part-time employees earned \$356 or more per week while the lowest 20% were paid \$67 or less. In comparison, the top 20% of female part-time employees earned \$357 or more per week, while the bottom 20% earned \$91 or less.

DIAGRAM 4. DISTRIBUTION OF WEEKLY EARNINGS OF PART-TIME EMPLOYEES IN MAIN JOB, AUGUST 1995

Source: Table 5

The majority of full-time employees were permanent, while the majority of part-time employees were casual employees in their main job. Some 90% (2,996,600) of male and 92% (1,625,300) of female full-time employees were permanent employees in their main job. In contrast, 81% (358,800) of male and 61% (811,800) of female part-time employees were casual employees in their main job. The mean weekly earnings in main job of permanent employees were \$670 for males and \$500 for females, while for casual employees they were \$401 for males and \$226 for females (Table 5).

A smaller proportion of full-time than part-time employees were employed in the private sector in their main job. Some 76% (2,529,400) of male and 69% (1,216,600) of female full-time employees worked in the private sector in their main job. In contrast, 88% (387,700) of male and 80% (1,071,000) of female part-time employees worked in the private sector in their main job (Table 4).

Mean weekly earnings in main job of full-time employees were higher in the public than the private sector. Mean weekly earnings in main job for full-time public sector employees were \$722 for males and \$625 for females, while in the private sector they were \$656 for males and \$516 for females. In the year to August 1995, mean weekly earnings in main job of full-time employees grew 2.1% for male public sector employees, 4.5% for female public sector employees, 3.0% for male private sector employees and 5.5% for female private sector employees (Table 3).

Full-time employees were more likely to work for larger employers than part-time employees. Of the full-time employees in August 1995 who provided a size of location, 38% worked where size of location was less than 20 employees, 28% worked where there were 20 to 99 and 34% worked where there were 100 employees or more.

In comparison, of part-time employees, 51% worked where size of location was less than 20 employees, 27% worked where there were 20 to 99 and 21% worked where there were 100 employees or more. Mean weekly earnings in main job were higher in larger than smaller locations, ranging from \$431 where there were less than 10 employees to \$633 where there were 100 employees or more (Tables 3 and 4).

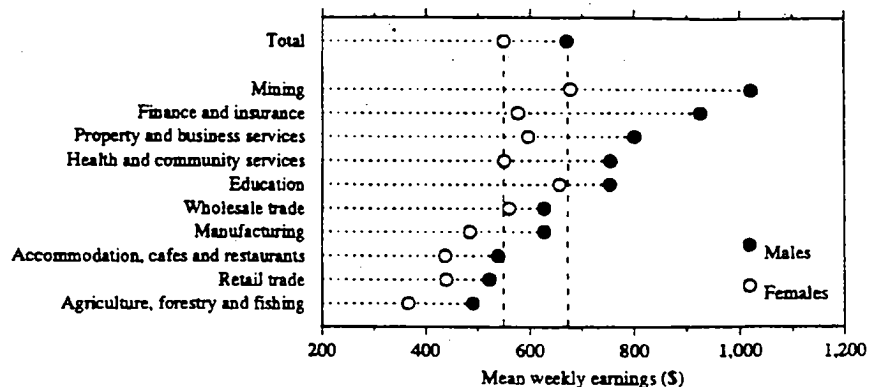

Of the 6,882,200 employees in August 1995, there were 2,208,400 (32%) employees with children under 15. Some 41% (388,100) of female employees with children under 15 were full-time employees in their main job compared with 95% (1,195,700) of male employees. In contrast, some 64% (1,380,600) of female employees without children under 15 worked full time in their main job compared with 85% (2,140,200) of male employees (Table 4).

#### FULL-TIME EMPLOYEES IN MAIN JOB

- Age** The highest mean weekly earnings in main job for full-time employees were recorded for males aged 45 to 54 years (\$772) and females aged 35 to 44 years (\$592).
- Male full-time employees aged 15 to 19 years received less than half of the mean weekly earnings in main job received by males aged 20 years and over (\$300 compared to \$687).
- Female full-time employees aged 15 to 19 years earned a little over half of the mean weekly earnings in main job received by those aged 20 years and over (\$290 compared to \$561) (Table 12).
- Industry** Full-time employees in the Agriculture, forestry and fishing division and the Retail trade division recorded the lowest mean weekly earnings in main job (\$472 and \$493 respectively). The highest mean weekly earnings in main job was recorded in the Mining division (\$984) followed by the Finance and insurance division, which in the 12 months to August 1995, recorded the largest increase of 11% from \$676 to \$753 (Table 7).
- Occupation** Full-time employees who worked as Labourers and related workers recorded the lowest mean weekly earnings in main job (\$490), while the next lowest major groups were Tradespersons (\$553), Clerks (\$553) and Salespersons and personal service workers (\$555). Managers and administrators recorded the highest mean weekly earnings in main job (\$846), followed by Professionals (\$817). In the 12 months to August 1995, Salespersons and personal service workers recorded the largest increase of 5.9% from \$524 to \$555 (Table 6).
- Birthplace** Over three-quarters (3,880,000) of full-time employees were born in Australia, 11% (559,600) were born overseas in main English speaking countries and 13% (665,000) were born in other countries. The mean weekly earnings in main job of those born in Australia were \$662 for males and \$547 for females. For those born in main English speaking countries the estimates were \$759 for males and \$608 for females and for those born in other countries they were \$653 for males and \$514 for females (Tables 3 and 4).

DIAGRAM 5: MEAN WEEKLY EARNINGS IN MAIN JOB OF FULL-TIME EMPLOYEES IN MAIN JOB BY SELECTED INDUSTRIES, AUGUST 1995

Source: Table 7

**EMPLOYMENT BENEFITS IN MAIN JOB**

In August 1995, 97% of the 5,104,600 full-time employees received one or more of the 'standard' employment benefits of superannuation, sick leave, holiday leave or long service leave in their main job. In comparison, 69% of the 1,777,700 part-time employees received one or more 'standard' employment benefits.

Public sector employees had a higher incidence of receipt of standard benefits than private sector employees. Of the 1,677,600 public sector employees, 93% received superannuation, 88% received holiday leave, 89% received sick leave and 86% received long service leave. In comparison, of the 5,204,600 private sector employees, the proportions were 85%, 70%, 70% and 57%, respectively.

Persons who worked for larger employers also had a higher incidence of receipt of standard benefits. The proportion of employees receiving one or more benefits was 83% where size of location was less than 10 employees, 88% where there were 10 to 19, 93% where there were 20 to 99 and 97% where there were 100 or more employees (Table 10).

**TRADE UNION MEMBERSHIP**

In August 1995, some 33% (2,251,800) of employees were members of a trade union, a fall of 2.3 percentage points from August 1994.

The number of full-time employees reporting that they were members of a trade union fell from 1,904,700 in August 1994 to 1,854,000 in August 1995, and the corresponding proportion of employees who were members of a trade union fell from 39% to 36%.

In comparison, the number of part-time employees who reported that they were members of a trade union rose from 378,700 in August 1994 to 397,800. However, this increase did not match the growth in the number of part-time employees over the year resulting in the corresponding proportion of employees who were members of a trade union falling from 23% to 22% (Table 11).

**PERMANENT OR CASUAL EMPLOYEES**

The proportion of employees reporting that they were casual employees in their main job has increased from 19% in August 1988 to 24% in August 1995. Whilst the majority of casual employees in August 1995 were female (58%), over the last seven years the proportion of male employees who were casuals has risen from 12% to 18%. Over the same period, the proportion of female employees who were casuals increased from 29% to 31% (Table 5).

## EXPLANATORY NOTES

### INTRODUCTION

**1** The monthly population survey (which is described in *Labour Force, Australia* (6203.0)) comprises the monthly Labour Force Survey and supplementary topics. These tables contain some results of a supplementary survey run in association with the August 1995 Labour Force Survey conducted throughout Australia.

**2** Of the respondents to the Labour Force Survey those who fell within the scope of the supplementary survey were asked additional questions about their weekly earnings and frequency of pay. They were also asked about standard benefits provided to them by employers and whether they were a member of a trade union and whether it was in connection with their main job.

### SCOPE

**3** The scope of this supplementary survey was the same as that used for the Labour Force Survey (described in full in *Labour Force, Australia* (6203.0)), except that it was restricted to persons who were employees in their main job excluding persons who worked solely for payment in kind.

### COVERAGE

**4** In the population survey, coverage rules are applied which aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection. See *Labour Force, Australia* (6203.0) for more details.

### DEFINITIONS

**5** Definitions of labour force and demographic classifications appearing in these tables are given in *Labour Force, Australia* (6203.0).

**6** Unless otherwise stated, all characteristics referenced in these tables relate to the week before the interview (i.e. the reference week).

### RESULTS OF THE SURVEY

**7** Due to differences in the method of estimation used in this supplementary survey and that used in the Labour Force Survey, there are some small variations between estimates in these tables and those in the corresponding issue of *Labour Force, Australia* (6203.0).

**8** The estimates in these tables refer to information collected in the survey month and, due to seasonal factors, may not be representative of other months of the year.

**9** Results of similar surveys, conducted annually since August 1975, have been given in issues of the discontinued publication *Weekly Earnings of Employees (Distribution), Australia* (6310.0).

**10** Statistical tables formerly published in the above bulletin are now available in this Standard Data Service, available on subscription or on request. Inquiries should be made to the contact named in the Inquiries box on the Contents page.

**11** A brief analysis of statistics from this survey, and set of summary tables were published in the December 1995 issue of *Labour Force, Australia* (6203.0).

**12** This survey is scheduled to be conducted next in August 1997.

COMPARISON WITH AVERAGE  
WEEKLY EARNINGS,  
STATES AND AUSTRALIA  
(6302.0)

**13** The survey was conducted primarily to obtain statistics on the distribution of earnings of employees classified by characteristics such as marital status, sex, age and whether the earnings came from the main job or a second job. Caution should be exercised when comparing the means (averages) in these tables with estimates of average weekly earnings included in the quarterly publication *Average Weekly Earnings, States and Australia* (6302.0) which are compiled from a survey of employers. There are important differences in the scope and methodology of the two surveys.

**14** The quarterly Survey of Average Weekly Earnings excludes employees in the industries of Agriculture, Forestry and Fishing (ANZSIC Division A) and Private Households Employing Staff (ANZSIC Subdivision 97) both of which are included in this household survey. Data from the quarterly Survey of Average Weekly Earnings are collected from employers who fill in a mailed questionnaire giving details of their employees' weekly earnings. For this household survey, respondents are either interviewed personally at their dwelling or another adult member of their household responds on their behalf.

**15** The methodology used in this household survey is associated with sources of non-sample error not found in surveys of employers which may also explain some of the differences between the results of the two surveys.

UNPUBLISHED STATISTICS

**16** As well as the statistics included in these tables and related data services, the ABS may have other relevant unpublished data available. Inquiries should be made to the contact named in the Inquiries box on the Contents page.

DISCONTINUITIES IN THE  
SERIES

**17** The estimates for this survey are not strictly comparable with those obtained from the August 1990 survey. In August 1990, the survey excluded persons aged 70 years and over. The scope of the surveys since 1991 and surveys run prior to August 1990 included all persons aged 15 years and over.

**18** Care should be taken when comparing the movements in mean weekly earnings between 1990 and 1991, and between 1991 and 1992 with movements between other years. There was an elapsed time of 11 months (August 1990 to July 1991) and 13 months (July 1991 to August 1992) between repeats of the survey. The usual period between surveys is 12 months.

SURVEY SAMPLE REDESIGN

**19** In years previous to August 1994 this supplementary survey has been conducted on the full sample of dwellings selected in the Labour Force Survey. From August 1994 this has been restricted to seven-eighths of the full sample size. As a result, the standard errors for this survey differ from those applicable to surveys before August 1994.

BENCHMARK REVISION

**20** From February 1994, the monthly Labour Force Survey and its supplementary surveys are based on population estimates from the 1991 Census of Population and Housing. While historical monthly labour force estimates were revised back to January 1989, results of supplementary surveys conducted before February 1994 were not revised and are based on population estimates from the 1986 Census of Population and Housing.

**21** The change to population estimates based on the 1991 Census of Population and Housing resulted in a downward revision to the size of the in-scope civilian population aged 15 and over (the January 1994 estimate of this population was revised from 13,960,400 to 13,860,400, a downward revision of 100,000 or approximately one per cent).

**22** This change in the base population estimates should be considered when comparing the results of supplementary surveys conducted before February 1994 with results of those conducted after February 1994.

#### ESTIMATION PROCEDURE

**23** The estimates of employees aged 15 years and over are derived from the population survey by use of a ratio estimation procedure, which ensures that the estimates conform to an independently estimated distribution of the population for each capital city and remainder of State by age, sex and labour force status, rather than to the corresponding distribution within the sample itself.

#### RELIABILITY OF THE ESTIMATES

**24** Estimates in these tables are subject to sampling and non-sampling errors. For more information refer to the Technical Notes section.

**25** Care should be exercised with regard to the estimates of weekly earnings provided in these tables. The collection methodology used may have had some effect on the reporting of weekly earnings information. In particular, the apparent irregularity in the numbers of persons reporting weekly earnings in the range of \$1040 to \$1080 may be due to the data collection technique used.

#### RELATED SURVEYS

**26** Other supplements to the monthly Labour Force Survey which may be of interest include:

*Employment Benefits, Australia* (6334.0.40.001) — conducted biennially

*Trade Union Members, Australia* (6325.0.40.001) — conducted biennially

*Working Arrangements, Australia* (6342.0) — conducted biennially

*Career Experience, Australia* (6254.0) — conducted three yearly

**27** Statistical tables from the above surveys are now available as a Standard Data Service by subscription or on request. Inquiries should be made to the contact in the Phone Inquiries box on the Contents page. Customers will also be advised of the forthcoming release of Standard Data Services.

**28** Because estimates have been rounded, discrepancies may occur between sums of the component items and totals.

#### SYMBOLS AND OTHER USAGES

\* subject to sampling variability too high for most practical uses. See the Technical Notes section for details  
.. not applicable

## TECHNICAL NOTES

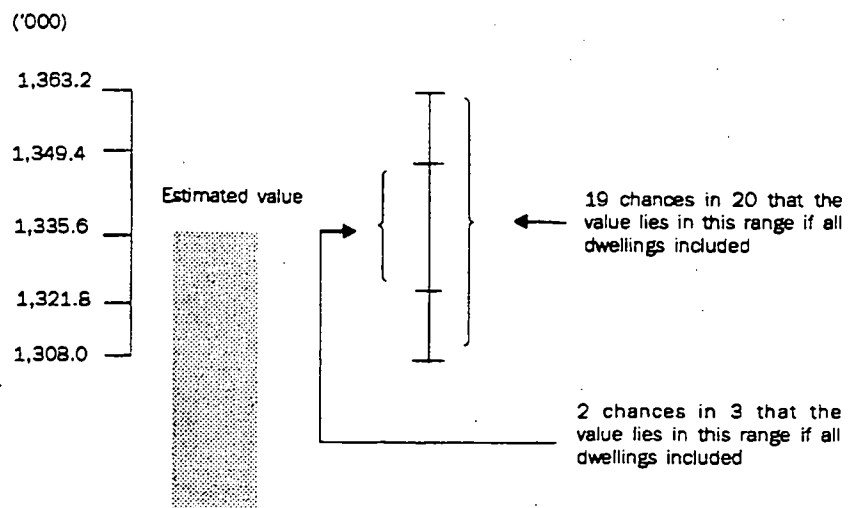

### INTRODUCTION

Since the estimates in these tables are based on information obtained from occupants of a sample of dwellings, they are subject to sampling variability, that is, they may differ from those that would have been produced if all dwellings had been included in the survey. One measure of the likely difference is given by the *standard error*, which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included. There are about two chances in three that a sample estimate will differ by less than one standard error from the number that would have been obtained if all dwellings had been included, and about 19 chances in 20 that the difference will be less than two standard errors. Another measure of the likely difference is the *relative standard error*, which is obtained by expressing the standard error as a percentage of the estimate.

Space does not allow for the separate indication of the standard errors of all estimates in these tables. A table of standard errors applicable to persons estimates is given on page 47. Since they are averages based on calculations for a limited number of past surveys over a wide range of labour force characteristics these numbers will not give a precise measure of the standard error of a particular estimate but they will provide an indication of its magnitude.

### CALCULATION OF STANDARD ERROR

An example of the calculation and the use of standard errors in relation to estimates of persons is as follows. Table 5 shows the estimated number of females who in August 1995, were part-time employees in main job was 1,335,600. Since this estimate is between 1,000,000 and 2,000,000, the table shows that the standard error for Australia will be between 12,600 and 16,300 and can be approximated by interpolation as 13,800 (rounded to the nearest 100). Therefore, there are about two chances in three that the value that would have been produced if all dwellings had been included in the survey will fall in the range 1,321,800 to 1,349,400 and about 19 chances in 20 that the value will fall within the range 1,308,000 to 1,363,200. This example is illustrated in the following diagram.

## AVERAGES AND MEDIANS

The relative standard errors of estimates of mean and median weekly earnings are obtained by first finding the relative standard error of the estimate of the total number of persons contributing to the estimate and then multiplying the figure by the following relevant factors:

### Mean weekly earnings

Part-time workers 1.0  
Full-time workers 0.7  
All employees 0.9

### Median weekly earnings

Part-time workers 1.4  
Full-time workers 0.7  
All employees 1.0

An example of the calculation of standard errors by the use of the above factors is as follows:

Table 5 shows the estimate of median weekly earnings of female part-time employees in August 1995 was \$217 and the estimate of total number of employees contributing to this estimate was 1,335,600. The standard error of this estimate (1,335,600) is about 13,800 so the relative standard error is about 1.0%. The relative standard error of the estimate of median weekly earnings is calculated by multiplying this figure (1.0) by the appropriate factor shown in the previous paragraph (in this case 1.4) :  $1.0 \times 1.4 = 1.4\%$ . The standard error of this estimate of median weekly earnings is therefore 1.4% of \$217, i.e. about \$3.04. Therefore, there are about two chances in three that the median weekly earnings of female part-time workers would fall within the range \$213.96 to \$220.04, and about 19 chances in 20 that they would fall within the range \$210.92 to \$223.08.

As can be seen from the standard error table, *the smaller the estimate the higher is the relative standard error*. Very small estimates are thus subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In these tables, only estimates with relative standard errors of 25% or less and percentages based on such estimates are considered sufficiently reliable for most purposes. However, estimates with larger relative standard errors have been included and are preceded by an asterisk (e.g. \*4.5) to indicate they are subject to high standard errors and should be used with caution.

## PROPORTIONS AND PERCENTAGES

Proportions and percentages formed from the ratio of two estimates are also subject to sampling errors. The size of the error depends on the accuracy of both the numerator and the denominator. A formula to approximate the relative standard error (RSE) of a proportion is:

$$RSE (x/y) = \sqrt{[RSE (x)]^2 + [RSE (y)]^2}$$

Considering the example from the paragraph *Calculation of Standard Error*, 1,335,600 female part-time employees represented 43.0% of the 3,104,300 female employees in August 1995. The standard error of 3,104,300 is approximately 18,600 so the relative standard error is 0.6%. The relative standard error for 1,335,600 is 1.0%. Applying the above formula, the relative standard error of the proportion is  $\sqrt{(1.0)^2 + (0.6)^2}$  or 0.8%, giving a standard error for the proportion (43.0%) of 0.3 percentage points. Therefore, there are about two chances in three that the proportion of female employees who worked on a part-time basis in August 1995 is between 42.7% and 43.3% and 19 chances in 20 that the proportion is within the range 42.4% to 43.6%.

## SAMPLING ERROR

Published estimates may also be used to calculate the difference between two survey estimates (of numbers or percentages). Such an estimate is subject to sampling error. The sampling error of the difference between two estimates depends on their standard errors and the relationship (correlation) between them. An approximate standard error (SE) of the difference between two estimates (x-y) may be calculated by the following formula:

$$SE (x-y) = \sqrt{[SE (x)]^2 + [SE (y)]^2}$$

While this formula will only be exact for differences between separate and uncorrelated characteristics or subpopulations it is expected to provide a good approximation for all differences likely to be of interest in these tables.

## NON-SAMPLING ERROR

The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by interviewers and respondents and errors made in coding and processing data. Inaccuracies of this kind are referred to as the *non-sampling error*, and they may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

## GLOSSARY

<b>Casual employees in main job</b>	Employees who were not entitled to either <i>annual leave</i> or <i>sick leave</i> .
<b>Dependants</b>	All family members under 15 years of age; all sons or daughters aged 15 to 19 years attending school or aged 15 to 24 years attending a tertiary educational institution full time, except those classified as husbands, wives or lone parents.
<b>Employees</b>	Employed persons aged 15 years and over who worked in their main job for an employer for wages or salary or in their own business (either with or without employees), if that business was a limited liability company.
<b>Family</b>	<p>Two or more related persons (<i>relationship</i> includes relationships by blood, marriage or adoption) usually resident in the same household at the time of the survey. A family comprises a married couple or a family head as defined, together with any persons having any of the following relationships to them:</p> <ul style="list-style-type: none"><li>▪ sons or daughters of any age, if not married and with no children of their own present;</li><li>▪ other relatives if not accompanied by a spouse; sons or daughters, or parents of their own; or</li><li>▪ any children under 15 years of age who do not have a parent present.</li></ul> <p>Further details on the determination of family relationships are given in <i>Labour Force, Australia</i> (6203.0).</p>
<b>Full-time employees in main job</b>	All employees for whom 'full time' was the response to the question 'Is your main job full time or part time?'
<b>Full-time workers</b>	Employees who usually worked a total of 35 hours or more a week in all jobs and others who usually work less than 35 hours a week but worked 35 hours or more during the reference week.
<b>Hours paid for in main job</b>	The number of hours for which employees were paid, not necessarily the number of hours actually worked during the reference week (e.g. an employee on paid leave for the week was asked to report the number of hours for which they were paid).
<b>Hours worked</b>	The number of hours actually worked during the reference week.
<b>Industry</b>	Unless otherwise specified all occurrences of industry in these tables refer to Industry Division as defined by the <i>Australian and New Zealand Standard Industrial Classification (ANZSIC) 1993</i> , and relate to main job. However, unpublished industry data is available at Industry Group level.
<b>Main English speaking countries</b>	The United Kingdom, Ireland, Canada, the United States of America, New Zealand and South Africa.
<b>Main job</b>	The job in which most hours were usually worked.
<b>Mean weekly earnings</b>	The amount obtained by dividing the total earnings of a group by the number of employees in that group.

<b>Median weekly earnings</b>	The amount which divides the distribution of employees into two equal groups, one having earnings above and the other below that amount. Medians were calculated from grouped data, the class intervals in some cases being finer than those published in the tables. Linear interpolation was used within the class interval which contained the median.
<b>Occupation</b>	Unless otherwise specified all occurrences of occupation in these tables refer to Major Group as defined by the <i>Australian Standard Classification of Occupations (ASCO), 1986</i> .
<b>Part-time employees in main job</b>	All employees for whom 'part time' was the response to the question 'Is your main job full time or part time?'
<b>Part-time workers</b>	Employees who usually worked a total of less than 35 hours a week in all jobs and who did so during the reference week.
<b>Permanent employees in main job</b>	Employees who were entitled to <i>annual leave</i> or <i>sick leave</i> in their main job.
<b>Second job</b>	A job, other than the main job, in which some hours were worked during the reference week. A person who held more than one job is classified to the industry and occupation of their main job. Service in the reserve defence forces is not regarded as a second job. Persons who by the nature of their employment worked for more than one employer, e.g. domestics, odd-job workers, baby-sitters, are not counted as having a second job unless they also held another job of a different kind, nor are those who worked for more than one employer solely by reason of changing jobs during the reference week.
<b>Sector of main job</b>	Is used to classify a respondent's employer as a public or private enterprise. Public sector includes local government authorities, government departments, agencies and authorities created by, or reporting to, the Commonwealth and State parliaments. In August 1995 there were 49,600 persons for whom sector could not be determined. These persons were included in the private sector for the purpose of these tables.
<b>Size of location</b>	The number of persons employed at the location of the respondent's main job.
<b>Weekly earnings</b>	Amount of 'last total pay' from wage and salary jobs prior to the interview (i.e. before taxation and other deductions had been made). For persons paid other than weekly, earnings were converted to a weekly equivalent. No adjustment was made for any back payment of wage increases or pre-payment of leave, etc.

## SPECIAL DATA SERVICES

### DATA ITEMS AND HOW TO ORDER SPECIAL TABLES FROM THIS SURVEY

The ABS offers a range of unpublished data from this survey upon request.

This section specifies the data items, categories and populations which relate to the survey. More detailed breakdowns of some data items are available on request.

The population(s) for a particular data item refers to the persons in the survey to whom the data item relates.

Refer to the glossaries in this publication and in *Labour Force, Australia* (6203.0) for definitions of data items.

#### POPULATIONS

- POPULATION 1: Employees  
 POPULATION 2: Employees who worked full time in their main job  
 POPULATION 3: Employees who were full-time workers  
 POPULATION 4: Employees who worked full time in their main job who were born overseas  
 POPULATION 5: Employees who worked as an employee in the reference week in their second job

## NEED MORE DATA?

### WHAT INFORMATION IS AVAILABLE ?

See the list of data items and survey populations on pages 50-53.  
Data items from this list may be cross-classified to produce tables  
to your specifications.

### COST

The cost of special data tables is available on request, but will  
depend on the number of data items, and their degree of detail.

### METHOD OF PAYMENT

Payment can be made by credit card or on receiving our invoice  
(the invoiced cost is payable in full within 28 days of supply).

### AVAILABLE ON PAPER OR FLOPPY DISK

Special data tables can be made available as printed tables or on  
floppy disk in a variety of formats to suit specific software packages.

Assistant Director

Labour Force Supplementary Surveys

Australian Bureau of Statistics

PO Box 10

BELCONNEN ACT 2616

## SUPPLEMENTARY AND SPECIAL SURVEYS

The supplementary and special surveys collect data on particular aspects of the labour force. The following is a historical list of supplementary and special labour force surveys. Statistical tables are available as a Publication or a Standard Data Service, available by subscription or on request. Inquiries should be made to the contact in the Phone Inquiries box on the Contents page. It may be possible to order Unit Record Tapes on the following supplementary and special surveys by contacting the ABS (see below for contact numbers).
