5. A detailed description of the Consumer Price Index is contained in Labour report No. 51, 1964.

The Consumer Price Index measures quarterly variations in prices of commodities and services as affecting a high proportion of the expenditure of wage-earner households in the aggregate. Changes in the pattern of this expenditure since 1950 have been such as to render it necessary to construct the index with additional items and changes in weighting patterns at intervals (rather than on the basis of a list of items and set weights which remained unchanged throughout the period). Five series for short periods, viz., September Quarter 1948 to June Quarter 1952; June Quarter 1952 to June Quarter 1956; June Quarter 1956 to March Quarter 1960; March Quarter 1960 to December Quarter 1963; and from December Quarter 1963 have therefore been constructed and linked to form a continuous retail price index series published herein as the Consumer Price Index. At times of linking the weighting pattern was altered and, in addition, new items (mainly ones that had become significant in household expenditure) were introduced. In each period between links the items and weighting have remained unchanged.

The indexes measure price movements in each city individually. They do not provide a comparison of the retail price level in any city with the retail price level of any other city.

Table 1 on page 4 of this Bulletin shows Consumer Price Index numbers for each fiscal year from 1956-57 to 1965-66 and for each quarter from December Quarter 1962. Table 2 on page 5 shows Group Index numbers quarterly from December Quarter 1965 to March Quarter 1967.

The following table is provided to assist interpretation of movements shown by the Consumer Price Index from December Quarter 1966 to March Quarter 1967.

Total Change (Index Points)	+ 0.5	+ 0.2	+ 0.6	+ 0.8	+ 0.7	+ 1.4	+ 1.9	+ 0.6

(a) For each city, the total change in index points since the preceding quarter is the arithmetical difference between the All Groups Index numbers for the last two quarters shown in Table 1, page 4 hereof (e.g. Weighted Average of Six State Capital Cities : December Quarter 1966, 138.4; March Quarter 1967, 138.9; difference of +0.5 index points). The dissection in this table shows the approximate amount each group has contributed to this total movement.

10. A summary of the movements of the various group indexes, together with the main quarterly price changes which affected the index between December Quarter 1966 and March Quarter 1967 is shown below:

Food Group

Changes in meat and potato prices are frequently the major cause of movements in the total index and of disparate movements between cities. The effects of changes in the price of these items in each city are shown in the table in paragraph 9 on page 2 of this bulletin and the corresponding paragraph of preceding bulletins.

The price of bread increased in 5 State capital cities and the price of milk increased in Hobart.

The Food Group of the index (weighted average of the six State capital cities) showed a quarterly increase of 0.6%.

Clothing and Drapery Group

The index for the weighted average of the six State capital cities showed a quarterly increase of 0.3%.

Housing Group

The index for the weighted average of the six State capital cities showed a quarterly increase of 0.6%.

Household Supplies and Equipment Group

The index for the weighted average of the six State capital cities showed a quarterly decrease of 0.1%.

Miscellaneous Group

Fares increased in Hobart and Canberra, the price of beer increased in Adelaide, the cost of third party insurance increased in Perth and the price of motor car registration increased in Brisbane and Hobart.

The index for the weighted average of the six State capital cities showed a quarterly increase of 0.3%.
