COMMONWEALTH BUREAU OF CENSUS AND STATISTICS
CANBERRA, AUSTRALIA
 31 OCTOBER 1969.

A provisional (\%)

provisional es foyte of the totyl value of retall sales in Australia lexcluding motor vehicies, parts, petrol, ete.) for the month frestafighry 969 is shown In the table overleaf. Figures for some earlier months are also shown for purposes of compartison.
2. The provisional monthly estimates of retail sales are obtained from a sub-sample of establishments used to providim quarterly estimates of the value of retail sales. The monthly sub-sample is comparatively small since it is designod to provide prompt estimates of the total value of retali sales (oxcluding motor vehicles, parts, petrol, etc.) without placing an undue burden on either the resources of the Bureau or upon retall establishments.
3. As the provisional monthly estimates are derived from returns received from a sample of retall establishments they may differ somewhat from the resulis which would have been obtalned from a comparable complete collection. A measure of the likely difference is given by the standard error of the estimate. There are about 2 chances in 3 that a sample estimate will differ from results which would be obtained from a comparable complete colleotion by less than 1 standard error and 19 chances in 20 that the difference would be less than 2 standard errors. If, for example, a sample gives an estimate of $\$ 500 \mathrm{mllil}$ on and the standard orror of this estimate is 1 per cent, i.e. 85 million, then there are 2 chances in 3 that a comparable complete collection would give a figure within the range of $\$ 495$ million to $\$ 505$ mililon and 19 chances $\ln 20$ that the figure would be within the range $\$ 490$ million to $\$ 510$ million.
4. The standard orror of the estimates of the total value of monthly retail sales lexcluding motor vehleles, parts, petrol, etc.) is about 1.0 per cent. The standard error of the month-to-month movement of the estimates of the value of retall sales is generally about 0.3 per cent of the current monthly estimate. For example, the movement In the value of retail sales betweon the months of August 1969 and September 1969 is shown by the original series In the table overleaf as a deemease of $\$ 10.9 \mathrm{~m} / 1 \mathrm{lli}$ ion. The standard orror of thia movement is about 0.3 per cent of the September 1969 estimate, which is approximately $\$ 2.0 \mathrm{mllil}$ ion. Therefore, there are 2 chances In 3 that the movement in retail sales between August 1969 and September 1969 is between $\$ 8.9$ mllition and $\$ 12.9$ million and 19 chances in 20 that it is between $\$ 6.9$ milition and $\$ 14.9$ million.
5. The monthly estimakes may also differ from those which would be obtalned from a sample as large as that used to provide quarterly estimates. Hence, the sum of the estimates for the three months comprising a quarter may differ from the estimate obtained for that quarter from the full quarterly sample. The standard orror of thls difference is approximately 0.8 per cent of the quarterly estimate. The monthly estimates are subsequently adjusted in accordance with the preliminary and final quariorly estimates as they become avallable.

## 6.

Seasonally adjusted statistics are also shown In the table overleaf. In the seasonal adjustment account has been taken of both normal seasonal factors and "trading-day" effects (arising from the varying numbers of Sundays, Mondays, Tuesdays, etc. In the month). While the normal seasonal factors should change only gradually from yoar to year, the trading-day adjustment for any month will vary from year to year in accordance with the comblnation of days which oecur in the month. No adjustment has been made for the effects of movement in the date of Easter. Detalls of the methods: used in seasonaliy adjusting these and other serles are given in MSeasonally Adjusted Indicators 1969" (Ref.No. 1.10) of 22 May 1969. It should be noted that the seasonally adjusted figures reflect the sampling errors to which the original figures are subject.
7. All flgures in this bulletin are on a basis comparable with the 1961 - 62 Retall Census. Further information relating to the basis on which the statistlas of retail sales of goods are complied is contalned In statistical bulletin MRetail Sales of Goods" (Ref.No. 11.4) June quarter 1969 of 7 October 1969.
