## MAIN FEATURES

total value of retall sales of goods (EXCLUDING MOTOR VEHICLES, PARTS, PETROL, ETC.), aUsTRALIA

CHART 1: MONTHLY ESTMATES, CURRENT PRICES

CHART S: quarterly ceanges, CONSTANT (AVERAGE 1979-80) PRICES

Sensonally adjusted
Percentage change from preceding quarter

This publication includes smoothed seasonally adjusted estimates of retail sales. The smoothing of seasonally adjusted series is a means of reducing the impact of the irregular component of the series to provide a basis for identifying the underlying trend. However, the smoothed seasonally adjusted estimates for the most recent months are subject to revision as data for subsequent months become available. Further details are given in paragraphs 16 to 21 of the Explamatory Notes at the end of this publication.

Estimates are subject to sampling and non-sampling variability as explained in paragraphs 10 to 15.

## AUSTRALIAN TOTAL ESTIMATES (see Charts 1 to 3 )

For November 1986, the estimated value of retail sales in Australia (excluding sales of motor vehicles, parts, petrol, etc.), in original terms, is $\$ 4,737.5$ million (see Chart 1 ). This is a decrease of $0.8 \%$ from October 1986 but an increase of $3.6 \%$ from November 1985.

The underlying trend in Australian retail sales, as indicated by the smoothed seasonally adjusted estimates, shows a slackening in the rate of growth over recent months, from a monthly rate of 1.1\% in June 1986 to $0.2 \%$ in November 1986 (see Chart 2). This slackening is evident, at varying rates, in most of the substantial industries, and across all States apart from WA (see details below).

In smoothed seasonally adjusted terms, retail sales in November 1986 are $7.6 \%$ above sales in November 1985.

INDUSTRY ESTIMATES (see Charts 4 to 9 on page 2)
As indicated by the latest smoothed seasonally adjusted estimates, the trend in retail sales by grocers, confectioners and tobacconists shows a progressive decline in the monthly growth rate from a peak of $1.2 \%$ in March and April 1986 to virtually no growth in November 1986 (see Chart 4). Grocers, confectioners and tobacconists account for about $32 \%$ of total retail sales.

Other food stores (principally take away food stores, milk bars and fruit and cake shops), which account for about $7 \%$ of total retail sales, have a gradual easing in the monthly growth rate of the trend in sales from a peak of $1.5 \%$ in April 1986 to $0.9 \%$ in November 1986 (see Chart 5).

For hotels, liquor stores and licensed clubs, which account for about $11 \%$ of total retail sales, the latest estimates of the trend in sales show the monthly growth for November 1986 as $0.5 \%$. Growth has been about this rate or slightly greater from July 1986, following a decline to no growth in April and May 1986 (see Chart 6).

TOTAL VALUE OF RETAIL SALES OF GOODS (EXCLUDING MOTOR VEHICLES, PARTS, PETROL. ETC.), SLOOTYIED SEASONALLY ADJUSTED, MONTHLY CHANGES CURRENT PRICBS, SELECTMD INDUSTRIES, AUSTRALIA Percentage chance from preceding month

CHART 4: GROCERS, CONFECTIONERS, TOBACCONISTS

CEART 5: OTHER FOOD STORES

CHART 6: HOTELS, LQUOR STORES, LCENEEED CLUBE

CHART 7: CLOTHING AND FABRICS STORES

CHART E: DIPPARTMENT STORES

CHART 9: ELECTRICAL GOODS STORES

The trend in sales by clothing and fabrics stores (which account for about $9 \%$ of total retail sales) shows small declines ( $-0.2 \%$ ) in October and November 1986, following a peak in the monthly growth rate of $\mathbf{1 . 3 \%}$ in June 1986 (see Chart 7). With data for November, the estimates of the growth rate for August and September have again been revised downwards.

The latest estimates indicate that the monthly growth rate of the trend of sales by department stores has slackened rapidly from $\mathbf{1 . 8 \%}$ in July 1986 to $\mathbf{- 0 . 2 \%}$ in November 1986 (see Chart 8). With the addition of data for November 1986, the estimates for the preceding few months have been revised downwards substantially, changing the previous indication of strong growth. Department stores account for about $\mathbf{1 1 \%}$ of total retail sales.

The trend in sales by electrical goods stores (which account for about $5 \%$ of total retail sales) continues to show a strong decline, on the basis of estimates to November 1986 (see Chart 9). The provisional monthly growth rate for October and November is $-\mathbf{2 . 3 \%}$. With the addition of data for November, the rates for the preceding few months have been revised downwards substantially. This follows a peak in the growth rate of $\mathbf{2 . 9 \%}$ in May 1986. This series shows more irregular movements than the other large retail industries, and the provisional growth rate could be revised substantially in subsequent months.

## STATE ESTIMATES (see Charts $\mathbf{1 0}$ to $\mathbf{1 5}$ on page 7)

As indicated by the smoothed seasonally adjusted estimates, the monthly growth rate of the trend of retail sales in New South Wales has slackened further to $0.1 \%$ in November 1986, following a peak of $1.6 \%$ in June 1986 (see Chart 10). New South Wales accounts for about $\mathbf{3 6 \%}$ of total retail sales in Australia.

Victoria (which accounts for about $27 \%$ of total retail sales) also experienced a further slackening in the growth rate, from a peak of $\mathbf{1 . 6 \%}$ in April and May 1986 to no growth in November 1986 (see Chart 11).

On the basis of the latest estimates, Queensland (which accounts for about $16 \%$ of total retail sales) has had a gradual decline in the monthly growth rate of the trend in retail sales from $1.2 \%$ in October and November 1985 to $0.1 \%$ in November 1986 (see Chart 12).

South Australia (about $8 \%$ of total sales) has also had a gradual decline in the monthly rate of growth of the trend in retail sales, from $0.9 \%$ in September 1985 to $-\mathbf{0 . 3} \%$ in October 1986, with the rate in November 1986 being -0.2\%. (see Chart 13).

Western Australia (about 9\% of total retail sales) shows a steady rate of growth in the trend of retail sales of $0.6 \%$ from August to November 1986, following a rate of 0.1\% in May 1986 (see Chart 14).

Tasmania (which accounts for about $3 \%$ of total retail sales) has experienced a further slackening in the monthly growth rate of the trend of retail sales from $1.1 \%$ in June, July and August 1986 to $0.3 \%$ in November 1986 (see Chart 15).

TABLE 5. TOTAL VALUE OF RETAIL SALES OF GOODS (EXCLUDING MOTOR VEHICLES, PARTS, PETROL, ETC.), MON ( $\$$ million)

## EXPLANATORY NOTES

## Introduction

This publication presents monthly estimates of the value of retail sales classified by industry (i.e. type of store) for Australia and each State.
2. Quarterly estimates of total retail sales at constant (average 1979-80) prices are also included
3. All the series shown in this publication, with estimates for earlier periods, are available on AUSSTATS - see paragraph 29.
4. Quarterly estimates of retail sales classified by commodity groups are published in Catalogue No. 8503.0. Analysis of the quarterly commodity data may lead to revisions in the monthly industry series. For this reason the monthly figures which relate to periods subsequent to the latest quarterly release should be regarded as preliminary.

## Scope and coverage

5. The estimates are derived from a survey which includes in its scope all retail trade establishments, i.e. establishments classified to subdivision 48 of the Australian Standard Industrial Classification (ASIC), 1983 Edition (Catalogue Nos. 1201.0 and 1202.0), except motor vehicle dealers, petrol retailers etc. (ASIC classes 4861-4868), bread and milk vendors (4878-4879), footwear repairers (4846) and electrical appliance repairers n.e.c. (4857). Also included are cafes and restaurants (9231), hotels, etc. (mainly drinking places) (9232), licensed clubs (9241-9243) and hairdressers (9351-9352).
6. The scope of the survey includes establishments in all States and the Australian Capital Territory, but excludes those in the Northern Territory.
7. The survey is based on a random sample of establishments within the scope defined above. From the data reported by the sampled establishments, aggregates comprising all retail sales in Australia (excluding Northern Territory) are estimated.
8. The retail sales reported are principally sales of new or used goods to final consumers for personal or household consumption. Excluded are sales of tools of trade, building materials and supplies, agricultural supplies and equipment, and business equipment. Sales of motor vehicles, parts, petrol, boats, caravans, etc. are out of scope of the estimates of retail sales in this publication. Also excluded are takings from meals consumed on the premises, accommodation, hairdressing, beauty treatments, and repairs. However, the estimates of retail sales in this publication include sales of take-away food, and beer, wine and spirits served with meals.

## Industry statistics

9. Details of the value of retail sales are available for 15 industries. The ASIC class(es) which make up each industry are as follows:

## Industry

Grocers, confectioners, tobacconists
Butchers
General stores
Other food stores
Hotels, liquor stores, licensed clubs
Clothing and fabrics stores
Department stores
Footwear stores
Domestic hardware stores, jewellers
Electrical goods stores
Furniture stores
Floor coverings stores
Chemists
Newsagents
Other

## Reliability of estimates

10. Since the estimates are based on information obtained from a sample survey of retail establishments, the estimates of levels and changes are subject to sampling variability; that is, they may differ from the figures that would have been produced if all units had been included in the survey. One measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because only a sample of units was included. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all units had been included, and about nineteen chances in twenty that the difference will be less than two standard errors.
11. Standard errors of estimates for the latest month and of estimates of change since the preceding month are shown in the tables. Examples of the use of these standard errors are given below:
(a) The estimate of $\$ 4,737.5$ million for the total value of retail sales in November 1986 has a standard error of about $\$ 30.7$ million. Therefore, there are two chances in three that the figure which would have been obtained if all establishments had been included in the survey would be within the range $\$ 4,706.8$ million to $\$ 4,768.2$ million, and nineteen chances in twenty that the figure would be within $\$ 4,676.1$ million to $\$ 4,798.9$ million.
(b) The estimated change of $-\$ 37.6$ million ( -0.8 per cent) in the total value of retail sales between October 1986 and November 1986 has a standard error of about $\$ 12.8$ million ( 0.3 per cent). Therefore, there are two chances in three that the change which would have been obtained if all establishments had been included in the survey would be within the range $-\$ 24.8$ million to $-\$ 50.4$ million ( -0.5 per cent to -1.1 per cent), and nineteen chances in twenty that the change would be within - $\$ 12.0$ million to $-\$ 63.2$ million ( -0.2 per cent to -1.4 per cent).
12. Standard errors of estimates of change between non consecutive months are not shown in this publication. These standard errors are generally much higher than the standard errors of change between consecutive months. For example, the standard error of change between the latest month and the corresponding month of the previous year is, on average, approximately 1.4 times the standard error of level of the latest month.
13. Users of the statistics in this publication should note that the standard errors are relatively large for estimates for some industries in some States.
14. Seasonally adjusted, smoothed seasonally adjusted and constant price estimates are also subject to sampling variability. For seasonally adjusted estimates, the standard errors in percentage terms approximate those for the unadjusted series. For smoothed seasonally adjusted estimates, the standard errors are generally not larger than for the seasonally adjusted estimates and are likely to be smaller. For constant price estimates, the standard errors may be up to 10 per cent higher than those for the corresponding current price estimates, because of the sampling variability contained in the prices data used to deflate the current price estimates.
15. The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting
by respondents and errors made in collection and processing of data. Inaccuracies of this kind are referred to as the nonsampling error and they may occur in any collection, whether it be a full count or only a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of forms, editing of data and efficient operating procedures.

## Seasonal adjustment and smoothing

16. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences can be more clearly recognised. In the seasonal adjustment of the retail sales estimates, account has been taken of both normal seasonal factors and 'trading-day' effects (arising from the varying numbers of Sundays, Mondays, Tuesdays etc. in the month). For total retail sales for Australia, adjustment has also been made for the effects of change in the date of Easter and Australia Day holidays. Seasonal adjustment does not remove from the series the effect of irregular influences (e.g. abnormal weather, industrial disputes) and the seasonally adjusted estimates still reflect the sampling and non-sampling errors to which the original estimates are subject. Details of the methods used in seasonally adjusting these series are a available on request.
17. The smoothing of seasonally adjusted series is a means of reducing the impact of the irregular component of the series. The smoothed seasonally adjusted estimates of retail sales have been derived by applying a 13 -term Henderson weighted moving average to the seasonally adjusted series. Smoothed seasonally adjusted series (often referred to as estimates of trend) are an indicator of the underlying behaviour of the series over time.
18. While this smoothing technique enables smoothed seasonally adjusted estimates to be produced for the latest month, it does result in revisions to the estimates for the most recent months as data for subsequent months become available. Generally subsequent revisions become smaller and after 3 months have a negligible impact on the series. There will also be revisions as a result of revisions to the original estimates and periodic reviews of seasonal and trading day factors.
19. This publication includes monthly smoothed seasonally adjusted estimates of retail sales for Australia, classified by industry, and for each State (total all industries). Seasonally adjusted estimates for industries and States are not included. These series, which commence in April 1982, are not long enough to provide sufficient information to allow reliable seasonal adjustment at present, since the seasonally adjusted estimates are subject to a relatively high degree of revision as data for later months become available and are taken into account in the re-estimation of seasonal and trading day factors. However the smoothed seasonally adjusted estimates included in this publication are not expected to be subject to the same degree of revision.
20. The seasonal adjustment of each industry series and each State series has been done independently and so, for any one month, the smoothed seasonally adjusted estimates for industries and States may not add to the smoothed seasonally adjusted estimates of total retail sales for Australia.
21. Seasonally adjusted and smoothed seasonally adjusted estimates of retail sales by industries in each State are not included because the series are not yet long enough to allow reliable adjustment.

## Estimates at constant prices

22. A quarterly series of the value of total retail sales at average 1979-80 prices is provided in both original and seasonally adjusted form. The scope of the series at constant prices is identical to that of the series at current prices.
23. The series is a measure of change in value after the direct effects of price changes have been eliminated. Measures of this type are subject to approximations and assumptions, and should not be interpreted in any precise quantitative sense.
24. Further information on the nature and concepts of constant price estimates is contained in Chapter 4 of Australian National Accounts: Concepts, Sources and Methods (5216.0).
25. As indicated in paragraph 4 , the estimates of retail sales (at current prices), for months subsequent to the latest quarterly release, may be revised following analysis of the quarterly commodity data. Similarly, the constant price estimates of total retail sales for quarters subsequent to the latest quarterly release may be revised and therefore should be regarded as preliminary.

## Related publications

26. Estimates of retail sales at current and constant prices for States and commodity groups are published quarterly in Retail Sales of Goods (Excluding Motor Vehicles, Parts, Petrol, etc.), Australia (8503.0).
27. Current publications produced by the ABS are listed in the Catalogue of Publications, Australia (1101.0). The ABS also issues, on Tuesdays and Fridays, a Publications Advice (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.
