MAY KEY POINTS

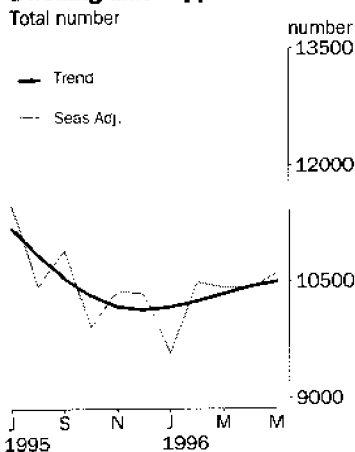

TREND ESTIMATES

- The trend for the total number of dwelling units approved rose by 0.6% in May 1996 to 10,502, following increases of 1.0% in April and 0.9% in March 1996.
- The latest trend growth is due to approvals of other residential dwellings, which rose by 22.2% in seasonally adjusted terms in May 1996.
- The trend for the number of other residential dwellings approved rose by 2.9% in May 1996 to 3,354, following rises of 3.5% in April and 3.3% in March 1996.
- The trend for the number of private sector houses approved has been revised to show a slight decline in May, after being flat since January 1996. The trend declined by 0.3% in May 1996 to 7,033.
- The trend to May 1996 for total dwelling units approved is increasing in New South Wales, Queensland, South Australia and the Northern Territory but falling in the remaining States and Territory.

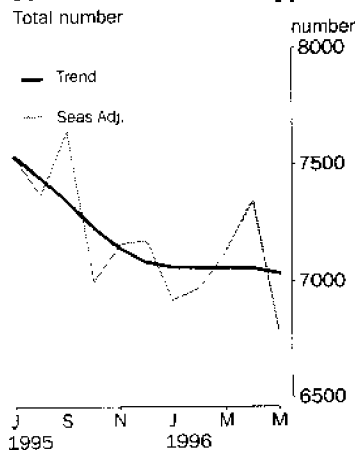

SEASONALLY ADJUSTED ESTIMATES

- The seasonally adjusted estimate for the total number of dwelling units approved rose by 1.7% in May 1996 to 10,597. This follows zero movement in April and a decline of 0.7% in March 1996.
- The number of private sector houses approved fell by 7.7% to 6,779, following growth of 3.0% in April and 2.3% in March 1996.
- The number of other residential dwelling units approved rose by 22.2% to 3,664. This follows falls of 6.2% in April and 4.0% in March 1996.

SIGNIFICANT REVISIONS THIS MONTH

Estimates for the number and value of dwelling units approved and the value of non-residential building approved in Tasmania and the Australian Capital Territory in April 1996 have been revised.

The revision in Tasmania was due to a hotel/motel project being incorrectly included as 27 new dwelling units.

The revision in the Australian Capital Territory was due to a public sector hostel redevelopment being incorrectly included as 28 new dwellings and a public sector housing redevelopment being included as 86 new dwellings when, in fact, it should have been 45 new dwellings and 85 dwellings created as a result of alterations and additions to existing residential buildings.

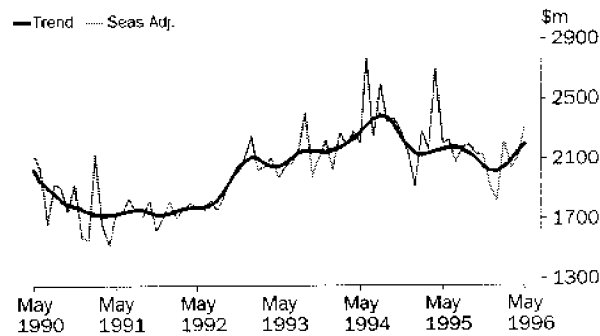

Where appropriate, seasonally adjusted and trend data, and total data for Tasmania, the Australian Capital Territory and Australia, affected by these amendments, have also been revised.

W. McLennan
Australian Statistician

VALUE OF BUILDING APPROVED

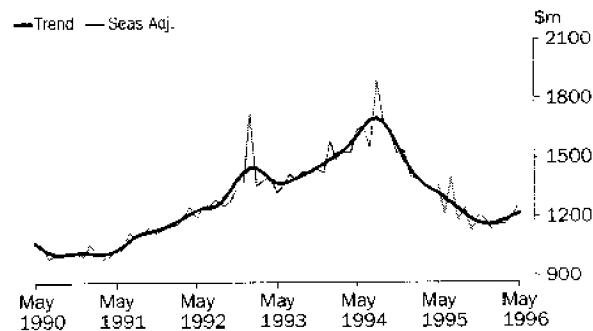

VALUE OF TOTAL BUILDING

The trend for the value of total building approved rose by 2.5% in May 1996, following growth of 2.6% in April and 2.3% in March 1996. The trend will continue to grow unless there is a fall of 20% or more in the seasonally adjusted series in June 1996. The historical average monthly movement, regardless of sign, is 8%.

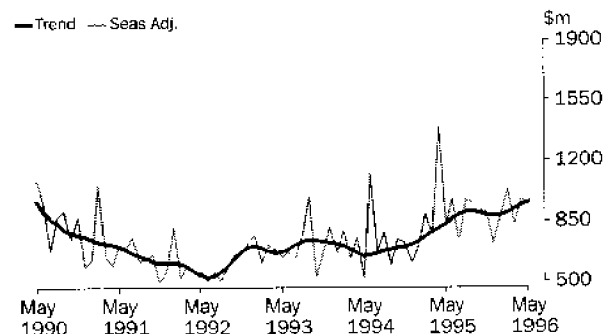

VALUE OF RESIDENTIAL BUILDING

The trend for the value of residential building approved rose by 1.2% in May 1996, following growth of 1.5% in April and 1.1% in March 1996. The trend will continue to grow unless there is a fall of more than 13% in the seasonally adjusted series in June 1996. The historical average monthly movement, regardless of sign, is 5%.

VALUE OF NON-RESIDENTIAL BUILDING

The trend for the value of non-residential building approved rose by 1.8% in May 1996, following growth of 2.1% in April and 2.4% in March 1996. The trend will continue to grow unless there is a fall of more than 10% in the seasonally adjusted series in June 1996. The historical average monthly movement, regardless of sign, is 19%.

WHAT IF...? REVISIONS TO TREND ESTIMATES

EFFECT OF NEW SEASONALLY ADJUSTED ESTIMATES ON TREND ESTIMATES

Readers should exercise care when interpreting trend estimates. The last six trend estimates, in particular, are likely to be revised when new seasonally adjusted estimates become available.

Generally, the size of revisions to the trend estimates tends to be larger, the greater the volatility of the original series. Analysis of the building approval original series has shown that they can be volatile; therefore, initial estimates of a month's trend value can be revised substantially. As a result, some months can elapse before turning points in the trend series are reliably identified.

The graphs and tables which follow present the effect of two possible scenarios on the previous trend estimates:

1 The June seasonally adjusted estimate is higher than the May estimate by:

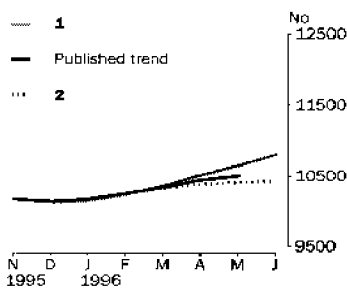

- +4% for total number of dwelling units approved
- +4% for number of private sector houses approved
- +5% for value of residential building approved
- +19% for value of non-residential building approved
- +8% for value of total building approved

2 The June seasonally adjusted estimate is lower than the May estimate by:

- -4% for total number of dwelling units approved
- -4% for number of private sector houses approved
- -5% for value of residential building approved
- -19% for value of non-residential building approved
- -8% for value of total building approved

These percentages were chosen because they represent the average absolute monthly percentage change for these series over the last ten years.

DWELLING APPROVALS

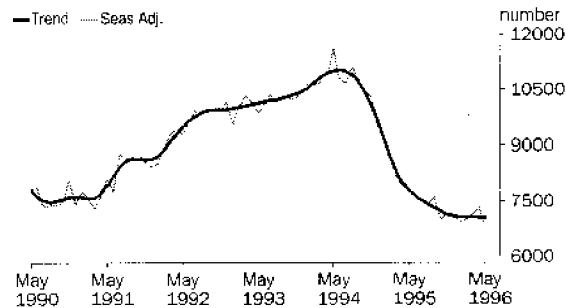

DWELLING UNITS APPROVED, AUSTRALIA

The trend for the total number of dwelling units approved increased by 0.6% in May 1996 to 10,502, the fifth consecutive monthly increase. However, the trend remained 37.3% below its last peak in July 1994. Weak trend growth will continue unless there is a fall of nearly 6% in the seasonally adjusted series in June 1996. The historical average monthly movement, regardless of sign, is 4%.

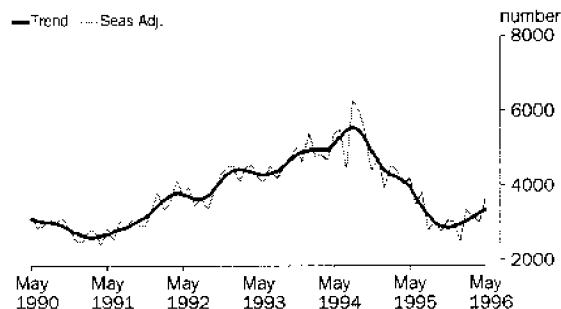

PRIVATE SECTOR HOUSES APPROVED, AUSTRALIA

The trend for the number of private sector houses approved, which had been relatively flat since January 1996, fell slightly by 0.3% in May 1996 to 7,033. There would need to be an increase of more than 6% in the seasonally adjusted series in June 1996 for the trend to show weak growth. The historical average monthly movement, regardless of sign, is 4%.

OTHER RESIDENTIAL BUILDING APPROVED, AUSTRALIA

The trend for the number of other residential dwelling units approved increased by 2.9% in May 1996 to 3,354. The trend will continue to grow unless there is a fall of more than 25% in the seasonally adjusted series in June 1996. The historical average monthly movement, regardless of sign, is 10%.

EXPLANATORY NOTES

INTRODUCTION

1 This publication presents monthly details of building work approved.

SCOPE AND COVERAGE

2 Statistics of building work approved are compiled from:

- permits issued by local government authorities in areas subject to building control by those authorities;
- contracts let or day labour work authorised by Commonwealth, State, semi-government and local government authorities;
- major building activity in areas not subject to normal administrative approval e.g. building on remote mine sites.

3 The scope of the survey comprises the following activities:

- construction of new buildings
- alterations and additions to existing buildings
- approved non-structural renovation and refurbishment work
- approved installation of integral building fixtures

From July 1990, the statistics include:

- all approved new residential building valued at \$10,000 or more
- approved alterations and additions to residential building valued at \$10,000 or more
- all approved non-residential building jobs valued at \$50,000 or more.

Excluded from the statistics is:

- construction activity not defined as building (e.g. construction of roads, bridges, railways, earthworks, etc.).

VALUE DATA

4 Value data are derived by aggregation of the estimated value of building work when completed as reported on approval documents. Such value data excludes the value of land and landscaping but includes site preparation. These estimates are usually a reliable indicator of the completed value of 'houses'. However, for 'other residential buildings' and 'non-residential buildings', these estimates can differ significantly from the completed value of the building.

OWNERSHIP

5 Building ownership is classified as either public or private sector and is based on the sector of intended owner of the completed building at the time of approval. Residential buildings constructed by private sector builders under government housing authority schemes are classified as public sector when the authority has contracted, or intends to contract, to purchase the building on or before completion.

FUNCTIONAL CLASSIFICATIONS

6 A building is classified according to its intended major function. A building which is ancillary to other buildings or forms a part of a group of related buildings is classified to the function of the building, not to the function of the group as a whole.

7 An example is the treatment of building work approved for a factory complex. For instance, a detached administration building would be classified to Offices, a detached cafeteria building to Shops, while the factory buildings would be classified to Factories.

FUNCTIONAL CLASSIFICATIONS
(continued)

8 An exception to this rule is the treatment of group accommodation buildings. For example, a student accommodation building on a university campus would be classified to Education.

9 In the case of a multi-function building, ie a single physical building which, at the time of approval is intended to have more than one purpose (e.g. a hotel/shops/casino project), the ABS endeavours to split the approval details according to each main function.

10 Where this is not possible because separate details cannot be obtained, the building is classified to the predominant function of the building on the basis of the function which represents the highest proportion of the total value of the project.

SEASONAL ADJUSTMENT

11 Seasonal adjustment is a means of removing the estimated effects of seasonal variation from the series so that the effects of other influences can be more clearly recognised.

12 In the seasonal adjustment of series, account has been taken of both normal seasonal factors and 'trading day' effects arising from the varying numbers of Sundays, Mondays, Tuesdays, etc. in the month. Adjustment has also been made for the influence of Easter which may affect the March and April estimates differently.

13 Seasonal adjustment does not remove from the series the effect of irregular or non-seasonal influences (e.g. the approval of large projects or a change in the administrative arrangements of approving authorities).

14 Most of the component series have been seasonally adjusted independently. Therefore, the adjusted components may not add to the adjusted totals.

15 As happens with all seasonally adjusted series, the seasonal factors are reviewed annually to take account of each additional year's data. For Building Approvals, the results of the latest review are shown in the July issue each year.

TREND ESTIMATES

16 Smoothing seasonally adjusted series reduces the impact of the irregular component of the seasonally adjusted series and creates trend estimates. For monthly series, these trend estimates are derived by applying a 13-term Henderson-weighted moving average to all months of the respective seasonally adjusted series except the last six months. Trend series are created for the last six months by applying surrogates of the Henderson moving average to the seasonally adjusted series. For the quarterly, constant prices, trend series shown in Table 7, the trend estimates are derived by applying a 7-term Henderson-weighted moving average to all quarters of the respective seasonally adjusted series except the last three quarters. Trend series are created for these last three quarters by applying surrogates of the Henderson moving average seasonally adjusted series. For further information, see *A Guide to Interpreting Time Series — Monitoring Trends: an Overview* (1348.0) or contact the Assistant Director, Time Series Analysis on (06) 252 6345.

17 While the smoothing techniques described in paragraph 16 enables trend estimates to be produced for the latest few periods, it does result in revisions to the trend estimates as new data becomes available. Generally, revisions become smaller over time and, after three months, usually have a negligible impact on the series. Revisions to the original data and re-analysis of seasonal factors may also lead to revisions to the trend.

CONSTANT PRICE ESTIMATES

18 Constant price estimates measure changes in value after the direct effects of price changes have been eliminated. The deflators used to revalue the current price estimates are derived from the same price data underlying the deflators compiled for the dwelling and non-dwelling construction components of the national accounts aggregate 'Gross fixed capital expenditure'.

19 Estimates at constant prices are subject to a number of approximations and assumptions. For more information on the nature and concepts of constant price estimates, see Chapter 4 of *Australian National Accounts: Concepts, Sources and Methods* (5216.0). Monthly value data at constant prices are not available.

UNPUBLISHED DATA

20 The ABS can also make available certain building approvals data which are not published. Where the data cannot be provided by telephone, it can be provided in microfiche, photocopy, computer printout, floppy disk and clerically extracted tabulation. A charge may be made for providing unpublished data in these forms.

- *Price Index of Materials Used in Building Other than House Building, Eight Capital Cities* (6407.0)
- *House Price Indexes: Eight Capital Cities* (6416.0)

SYMBOLS AND OTHER USAGES

- nil or rounded to zero
- r figure or series revised since previous issue
- n.a. not available

When figures have been rounded, discrepancies may occur between sums of the component items and totals.

GLOSSARY

Alterations and additions	Building activity carried out on existing buildings. Includes adding to or diminishing floor area, altering the structural design of a building and affixing rigid components which are integral to the functioning of the building.
Building	A building is a rigid, fixed and permanent structure which has a roof. Its intended purpose is primarily to house people, plant, machinery, vehicles, goods or livestock. An integral feature of a building's design is the provision for regular access by persons in order to satisfy its intended use.
Conversions, etc.	Includes dwelling units approved as part of alterations and additions to existing buildings (including conversions to dwelling units) and as part of the construction of non-residential building.
Dwelling unit	A dwelling unit is a self-contained suite of rooms, including cooking and bathing facilities and intended for long term residential use. Regardless of whether they are self-contained or not, units within buildings offering institutional care (eg, hospitals) or temporary accommodation (eg, motels, hostels and holiday apartments) are not defined as dwelling units. Such units are included in the appropriate category of non-residential building approvals.
Educational	Includes schools, colleges, kindergartens, libraries, museums and universities.
Entertainment and recreational	Includes clubs, cinemas, sport and recreation centres.
Factories	Includes paper mills, oil refinery buildings, brickworks and powerhouses.
Flats, units or apartments	Dwellings not having their own private grounds and usually sharing a common entrance, foyer or stairwell.
Health	Includes hospitals, nursing homes, surgeries, clinics and medical centres.
Hotels, motels and other short term accommodation	Includes hostels, boarding houses, guest houses, and holiday apartment buildings.
House	A house is a detached building primarily used for long term residential purposes. It consists of one dwelling unit. For instance, detached 'granny flats' and detached dwelling units (eg, caretaker's residences) associated with a non-residential building are defined as houses.
Miscellaneous	Includes justice and defence buildings, welfare and charitable homes, prisons and reformatories, maintenance camps, farming and livestock buildings, veterinary clinics, child-minding centres, police stations and public toilets.
New building work	Building activity which will result in the creation of a building which previously did not exist.
Non-residential building	A non-residential building is primarily intended for purposes other than long term residential purposes.
Offices	Includes banks, post offices and council chambers.
Other business premises	Includes warehouses, service stations, transport depots and terminals, electricity substation buildings, telephone exchanges, broadcasting and film studios.

Other residential building An other residential building is a building other than a house primarily used for long-term residential purposes. An other residential building contains more than one dwelling unit.

Religious Includes convents, churches, temples, mosques, monasteries and noviciates.

Residential building A residential building is a building consisting of one or more dwelling units. Residential buildings can be either houses or other residential buildings.
