(a) Average 1989-90 prices

## MAR QTR 1998 KEY POINTS

### TREND ESTIMATES

- GDP(A) increased by 0.6% in the March quarter to a level 3.8% higher than in March quarter 1997.
- All three independent measures of GDP increased in the March quarter, with GDP(I) up 0.5%, GDP(E) up 0.3% and GDP(P) up 0.9%.
- GDP(A) per capita increased by 0.2% in the March quarter to be 2.4% higher than in March quarter 1997.

### SEASONALLY ADJUSTED ESTIMATES

- GDP(A) increased by 1.3% in the March quarter to a level 4.9% higher than in March quarter 1997.
- All three independent measures of GDP increased, with GDP(I) up 1.7%, GDP(E) up 0.8% and GDP(P) up 1.2%.
- The implicit price deflator for GDP recorded a small increase of 0.2% to be 1.2% higher than in March quarter 1997.

## NOTES

FORTHCOMING ISSUES	ISSUE	RELEASE DATE
	<b>5206.0 Australian National Accounts: National Income, Expenditure and Product, June quarter 1998</b>	2 September 1998
	<b>5206.0.40.001 Australian National Accounts: Quarterly State Details, June quarter 1998</b>	9 September 1998

## REVISIONS IN THIS ISSUE

Rewrites to percentage changes for major summary aggregates in trend terms are shown in Tables 41 to 43, while rewrites to major summary aggregates in original terms are shown in Tables 44 to 46. Seasonal adjustment factors have been recalculated for private final consumption expenditure, government final consumption expenditure and public trading enterprises gross operating surplus. Trend estimates for recent quarters are affected by the addition of data for March quarter 1998, as well as rewrites to the original and seasonally adjusted data for earlier quarters. Original estimates for recent quarters have been revised to reflect more complete survey data.

## CHANGES IN THIS ISSUE

As announced in the Information Paper *Introduction of Chain Volume Measures in the Australian National Accounts* (5248.0), experimental chain volume measures for GDP(E) and its components have been included in this issue of 5206.0 (see Appendix, pages 107 to 113). Because of size limitations the usual Explanatory Notes have been omitted from this issue of 5206.0. The references to paragraphs in the Explanatory Notes, which have been retained in the commentary and table footnotes throughout this publication, therefore refer to the Explanatory Notes in the December quarter 1997 issue of 5206.0. Copies of the Explanatory Notes are available on request from the contact officers listed on the front cover of this publication.

W. McLennan  
Australian Statistician

### MARCH QUARTER SUMMARY COMMENT

Comments are based on  
trend **constant** price  
estimates, unless  
otherwise stated.

#### FINAL CONSUMPTION EXPENDITURE

- Private expenditure grew by 0.8% (no growth seasonally adjusted). Dwelling rent was the only major contributor to growth in the March quarter. Government consumption fell by 0.4% (1.9% seasonally adjusted).

#### GROSS FIXED CAPITAL EXPENDITURE

- Dwelling construction grew by 2.4% (0.5% seasonally adjusted) in the March quarter. Expenditure on equipment fell by 0.6% (fall of 4.1% seasonally adjusted) while non-dwelling construction rose by 4.7%. Overall, private GFCE rose 1.2% (8.8% in seasonally adjusted terms — see note on page 10.)

#### INCREASE IN PRIVATE NON-FARM STOCKS

- Private non-farm stocks increased by \$561 million (\$1,834 million seasonally adjusted) in the March quarter. The increase was strong in all major sectors (see page 11 for industry details).

#### EXPORTS OF GOODS AND SERVICES

- Exports of goods and services fell by 0.7% in the March quarter (fall of 2.2% seasonally adjusted), with goods declining 0.2%. Rural exports fell by 4.9%, due mainly to a 12.3% fall in cereals, while non-rural exports declined by 0.1%.

#### IMPORTS OF GOODS AND SERVICES

- Imports of goods and services increased by 1.8% in the March quarter (3.1% seasonally adjusted), with goods growing 2.6%. Capital goods rose by 3.4%, with ADP equipment being the single major contributor. Intermediate goods rose by 1.8% with parts for ADP equipment and processed industrial supplies being the major contributors. Consumption goods increased by 2.9%.

### MARCH QUARTER

### SUMMARY COMMENT

### AGRICULTURE, FORESTRY AND FISHING

- The trend estimate was unchanged but the seasonally adjusted estimate increased by 2.3%, mainly attributable to a rise in livestock slaughterings and a fall in seed and fodder inputs.

### MANUFACTURING

- Rose by 0.4% in trend terms and 2.9% in seasonally adjusted terms. About half of the seasonally adjusted increase was due to machinery and equipment.

### CONSTRUCTION

- Increased by 3.9% (5.4% seasonally adjusted). The major influence was strong growth in engineering construction.

### WHOLESALE TRADE AND RETAIL TRADE

- Wholesale trade fell by 0.8%, but retail trade increased by 1.0%. Both increased in seasonally adjusted terms, up 1.1% and 1.0%, respectively.

### COMMUNICATION SERVICES

- Continued to grow strongly in both trend (up 4.8%) and seasonally adjusted (up 6.3%) terms.

Comments are based on  
trend **constant** price  
estimates, unless  
otherwise stated.

## MAIN FEATURES

## INCOME AT CURRENT PRICES

### MARCH QUARTER SUMMARY COMMENT

Comments and graphs are based on trend **current** price estimates, unless otherwise stated.

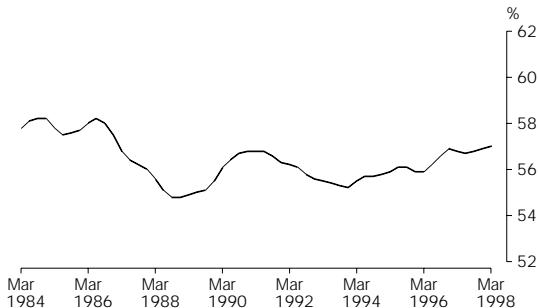

#### WAGES, SALARIES AND SUPPLEMENTS

- Rose 1.5% (1.2% seasonally adjusted).
- This reflects an increase in average earnings of 0.8% and an increase in the number of wage and salary earners of 0.7%. In seasonally adjusted terms, average earnings rose 0.7%, while the number of wage and salary earners increased by 0.6%.

#### GROSS OPERATING SURPLUS

- In the March quarter, the GOS of private corporate trading enterprises increased by 1.1%, following an increase of 1.3% in December quarter 1997. In seasonally adjusted terms, GOS increased by 3.5% in the March quarter, following a fall of 0.2% in December quarter 1997.

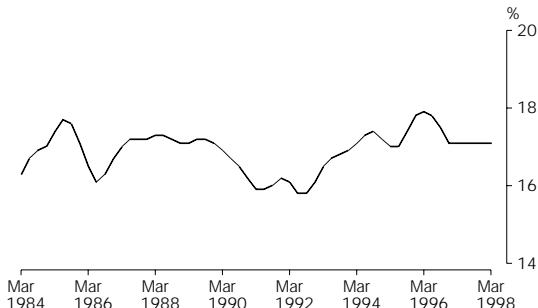

### WAGES SHARE OF GDP (AT FACTOR COST)(a)

### PROFIT(b) SHARE OF GDP (AT FACTOR COST)(a)

(a) GDP at factor cost is equal to the sum of wages, salaries and supplements and gross operating surplus (i.e. it equals GDP(I) less net indirect taxes).

(b) GOS of private corporate trading enterprises.

## ANALYSES AND COMMENTS

---

### RELIABILITY OF CONTEMPORARY TREND ESTIMATES

Seasonally adjusted series include both the trend effects and the irregular effects which influence movements in a series. As a result, seasonally adjusted estimates do not necessarily provide a good indication of the underlying behaviour of a series. On the other hand, trend estimates represent the underlying direction of the series, excluding seasonal effects and residual/irregular factors. Trend estimates are calculated by smoothing the seasonally adjusted series using a statistical procedure based on centred Henderson moving averages. The procedure used is designed to minimise distortions in the trend level, turning point shape and timing of turning points.

For the most recent quarters, insufficient data exist to use centred Henderson moving averages to calculate the trend values and so approximations to the Henderson moving averages are used for the latest three quarters. This means that revisions to the trend estimates for the last few quarters are unavoidable, even if none of the original data have been revised. More details about trend estimation are contained in the ABS Information Paper *A Guide to Interpreting Time Series — Monitoring Trends: An Overview* (1348.0) which was released on 19 April 1993.

Potential revisions to trend estimates can be indicated by showing the effects of particular changes in seasonally adjusted estimates that might occur in the next quarter. The table below shows the trend estimates for the last few quarters and the values to which they would be revised if the notional movements in seasonally adjusted GDP(A) actually occurred in June quarter 1998.

Seasonally adjusted growth of 0.5% is required in June quarter 1998 to maintain the trend growth, in June quarter, of 0.6% currently estimated for March quarter 1998

The ABS is currently reviewing the methodology for calculating the trend estimates. The results of this investigation will be advised in the June quarter 1998 issue of this publication.

### TREND ESTIMATE — PERCENTAGE CHANGE IN GDP(A)

## ANALYSES AND COMMENTS *continued*

---

### GROWTH RATES IN GDP(A)

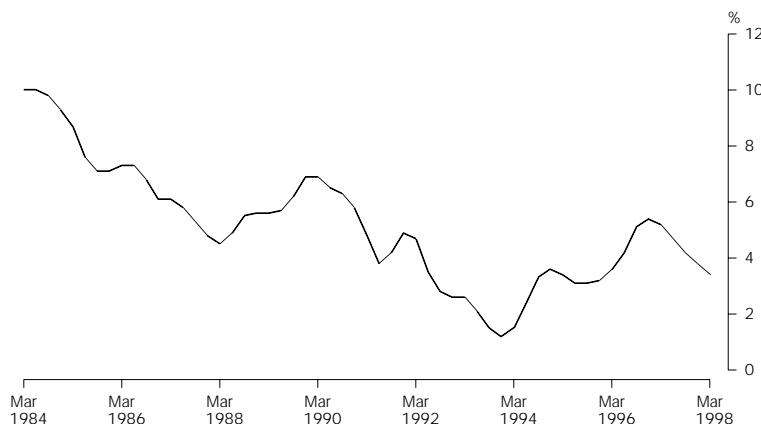

The graph below provides a comparison of the quarterly growth rates (percentage changes) in constant price GDP(A) in both seasonally adjusted and trend terms in recent years.

### HOUSEHOLD SAVING RATIO

In trended current price terms, the proportion of household disposable income devoted to consumption in the March quarter was 96.6%. The balance, household saving, was 3.4%. Caution should be exercised in interpreting this ratio in recent years, because major components of household income and expenditure may still be subject to significant revisions. The impact of these revisions on the saving ratio can cause changes in the apparent direction of the trend. The following graph presents the household saving ratio derived from trend data (see Explanatory Notes, paragraph 26).

Trend

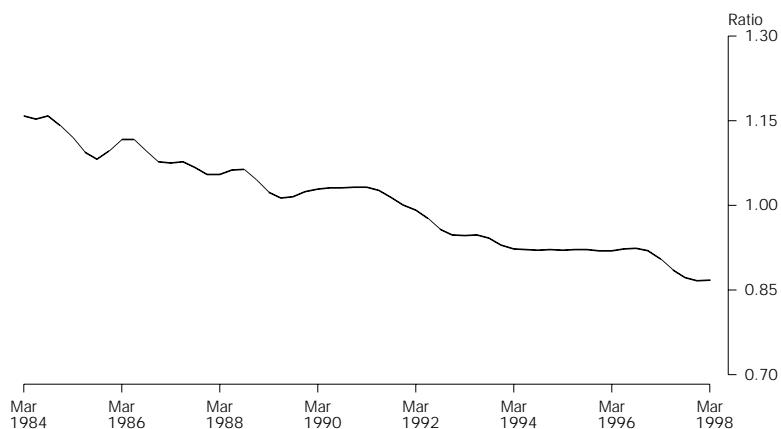

## **ANALYSES AND COMMENTS** *continued*

---

### PRIVATE NON-FARM STOCKS TO SALES RATIO

In trended current price terms, the book value of private non-farm stocks increased by \$1,125 million (1.5%) in the March quarter, while sales increased by \$1,245 million (1.5%). Consequently, the stocks to sales ratio rose marginally from 0.866 in December quarter 1997 to 0.867. The following graph presents the ratio of private non-farm stocks to sales over the last fourteen years (see Explanatory Notes, paragraph 24).

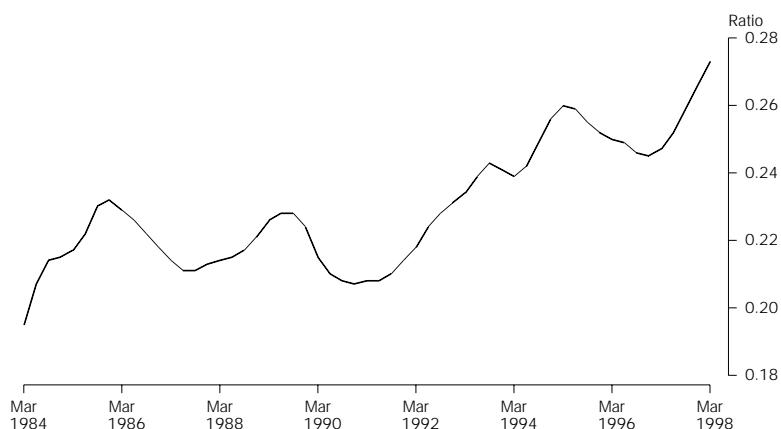

Trend at Current Prices

### IMPORTS TO SALES RATIO

The imports to sales ratio, trended and at current prices, increased from 0.266 in December quarter 1997 to 0.273. This reflects stronger growth in imports of merchandise goods (4.0%) than in sales (1.5%). The following graph presents the ratio of imports to sales over the last fourteen years (see Explanatory Notes, paragraph 25).

Trend at Current Prices

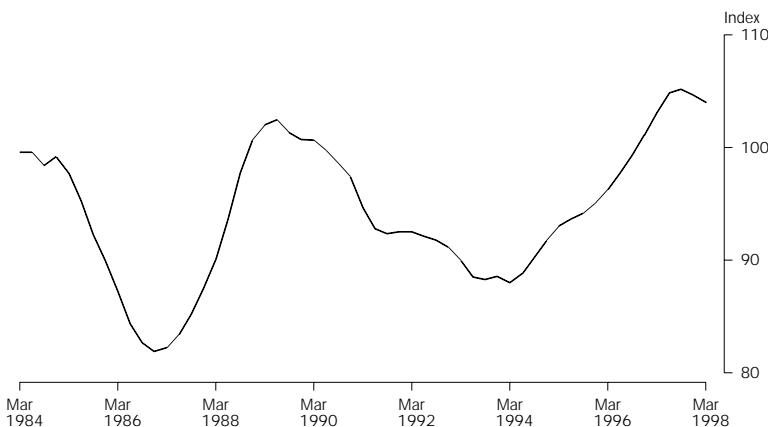

## ANALYSES AND COMMENTS *continued*

---

### TERMS OF TRADE

In March quarter 1998 the terms of trade index derived from trend estimates (see Explanatory Notes, paragraph 16) fell 0.7%. The implicit price deflator for exports rose 0.7%, while the deflator for imports rose 1.4%.

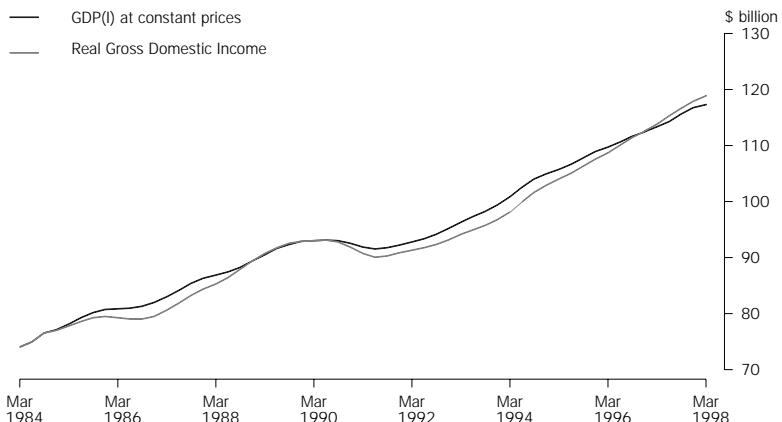

Trend (1989–90 = 100)

### REAL GROSS DOMESTIC INCOME

GDP at constant prices is a measure of the volume of goods and services produced in Australia. If the terms of trade change significantly over the period of comparison, then this measure of real GDP will not accurately reflect the change in real purchasing power of the income generated by domestic production. (See the Technical Note included in the September quarter 1993 issue of this publication for a more detailed discussion.) A better measure of the real purchasing power of income generated by domestic production is GDP(I) at average 1989–90 prices adjusted for the terms of trade effect, which is referred to as *real gross domestic income*. The graph below provides a comparison of trend GDP(I) at average 1989–90 prices and real gross domestic income. Trend and seasonally adjusted estimates of real gross domestic income are shown in Tables 68 and 69 respectively.

Trend

## ANALYSES AND COMMENTS *continued*

### PRIVATE GROSS FIXED CAPITAL EXPENDITURE— NON-DWELLING CONSTRUCTION AND EQUIPMENT

Movements in private gross fixed capital expenditure can often be affected by large second-hand transactions and large one-off purchases. In March quarter 1998 the publicly-owned Dampier to Bunbury natural gas pipeline was sold to the private sector for about \$2.1 billion. As a result, private gross fixed capital expenditure on non-dwelling construction recorded a particularly large increase in March quarter 1998. Details of recent transactions in second-hand assets between the private and public sectors, expenditure on new equipment and new work on non-dwelling construction are provided in the table below.

#### BUSINESS INVESTMENT AT AVERAGE 1989-90 PRICES

	NON-DWELLING CONSTRUCTION.....			EQUIPMENT.....		
	New work done – private	Net second-hand purchases from public sector	Total	New assets purchased – private	Net second-hand purchases from the public sector	Total
	\$ million	\$ million	\$ million	\$ million	\$ million	\$ million

### ANNUAL NATIONAL ACCOUNTS FOR REFERENCE YEAR 1996-97

As advised in paragraphs 10.10 and 10.15 of the Information Paper *Implementation of Revised International Standards in the Australian National Accounts* (5251.0), the usual annual publications *Australian National Accounts: National Income, Expenditure and Product* (5204.0) and *Australian National Accounts: State Accounts* (5220.0) will not be published for reference period 1996-97. This decision was taken in order to give priority to work on implementing the SNA93 changes in Australia's national accounts and to the integration of the national income, expenditure and product (NIEP) accounts with the Input-Output tables. Also, as a consequence of changes to the compilation methodology associated with the integration of the NIEP accounts and the Input-Output tables, future annual publications will be consistent with the June quarter NIEP accounts each year, rather than the December quarter accounts. Consequently, the 1996-97 issues of 5204.0 and 5220.0 would have had a shorter shelf life than normal.

As an interim measure for this year only, all of the summary tables and most of the supplementary tables from 5204.0 and 5220.0 have been compiled and are now available through special data services (5204.0.40.002 and 5220.0.40.001). The data in these special data services are consistent with the December quarter 1997 NIEP accounts. Data from these tables are also available on PC AUSSTATS.

It is planned to publish the 1997-98 issue of 5204.0 on an SNA93 basis in February 1999 and the 1997-98 issue of 5220.0 as soon as possible thereafter. The 1998-99 issue of 5204.0 is scheduled for release in November 1999, and subsequent issues will be released each November. Subsequent issues of 5220.0 will be released as soon as possible after the release of the corresponding issue of 5204.0.

### PRIVATE NON-FARM STOCKS

There was a significant increase in private non-farm stocks at constant prices in March quarter 1998, with all industries contributing to the stock build up. The following table shows the industry composition for the increase in private non-farm stocks in seasonally adjusted constant price terms for the last five quarters.

INCREASE IN PRIVATE NON-FARM STOCKS AT AVERAGE 1989-90 PRICES—SEASONALLY ADJUSTED

	Mar Qtr 1997	Jun Qtr 1997	Sep Qtr 1997	Dec Qtr 1997	Mar Qtr 1998

### **WAGES, SALARIES AND SUPPLEMENTS**

Quarterly movements in wages, salaries and supplements can at times be significantly affected by changes in two of the component series: severance, termination and redundancy payments, and supplements to wages and salaries (i.e. employers' contributions to superannuation and workers' compensation claims). Severance, termination and redundancy payments for recent quarters are shown below (although an estimate for March quarter 1998 is not yet available separately from the total wages and salaries figure) together with estimates for supplements for the last nine quarters. (The estimates can be shown only in original terms because wages, salaries and supplements are seasonally adjusted in total.)

	Severance, termination and redundancy payments \$m	Supplements to wages and salaries \$m

Table	<b>Page</b>
PUBLIC AUTHORITIES TABLES	
33 General government income and outlay account — original	50
34 Commonwealth general government income and outlay account — original	51
35 State and local general government income and outlay account — original	52
36 Taxes, fees and fines — original	53
37 Personal benefit payments, by level of government, by purpose — original	54
38 Public gross fixed capital expenditure, by level of government — original	55
STOCKS AND FARM TABLES	
39 Increase in stocks — original	56
40 Farm income — original	57
REVISION TABLES	
41 Revisions to percentage changes in GDP(E) and GDP(I) at average 1989–90 prices — trend	58
42 Revisions to percentage changes in GDP(P) at average 1989–90 prices — trend	59
43 Revisions to percentage changes in domestic production account — trend	60
44 Revisions to GDP(E) and GDP(I) at average 1989–90 prices — original	61
45 Revisions to GDP(P) at average 1989–90 prices — original	62
46 Revisions to domestic production account — original	63
LONG-TERM TABLES	
47 Measure of gross domestic product, gross farm product and gross non-farm product at average 1989–90 prices — trend	65
48 Measure of gross domestic product, gross farm product and gross non-farm product at average 1989–90 prices — seasonally adjusted	66
49 Measure of gross domestic product, gross farm product and gross non-farm product at average 1989–90 prices — original	67
50 GDP at average 1989–90 prices per unit of labour input — trend	68
51 GDP(E) and GDP(I) at average 1989–90 prices — trend	70
52 GDP(E) and GDP(I) at average 1989–90 prices — seasonally adjusted	72
53 GDP(E) and GDP(I) at average 1989–90 prices — original	74
54 GDP(P) at average 1989–90 prices — trend	76
55 GDP(P) at average 1989–90 prices — seasonally adjusted	80
56 GDP(P) at average 1989–90 prices — original	84
57 GDP(E) — trend	88
58 GDP(E) — seasonally adjusted	90
59 GDP(E) — original	92
60 Implicit price deflators — trend	94
61 Implicit price deflators — seasonally adjusted	96
62 GDP(I) — trend	98
63 GDP(I) — seasonally adjusted	99
64 GDP(I) — original	100
65 Gross farm product and gross non-farm product — trend, seasonally adjusted and original	101
66 Selected income aggregates — seasonally adjusted and original	102
67 Household income — trend, seasonally adjusted and original	103
68 Other selected series — trend	104
69 Other selected series — seasonally adjusted	105
70 Other selected series (continued) — trend and seasonally adjusted	106

(a) Import duties have been added and the imputed bank service charge associated with this sector has been deducted to derive these estimates. (b) ANZSIC divisions A to K and P. See paragraph 21 of the *Explanatory notes*.

(c) ANZSIC divisions B to K and P. See paragraph 22 of the *Explanatory notes*. (d) For the non-market industries the methods used to estimate gross product at constant prices do not adequately capture the change in gross product per unit of labour input. See paragraph 21 of the *Explanatory notes*. Hence the estimates for the market and non-farm market sectors provide more useful indicators of changes in labour productivity than the estimates for all industries. (e) The seasonally adjusted estimates of hours worked have a history of substantial volatility, and so the most recent trend estimates are subject to revision when seasonally adjusted data for subsequent quarters become available.

## EXPLANATORY NOTES

---

### INTRODUCTION

**1** This publication contains estimates of the components of gross domestic product and national expenditure and supporting tables for the latest quarter, together with comparative estimates for the eight previous quarters and the last four financial years. Seasonally adjusted and trend estimates of the major aggregates and some selected series are also provided for the latest quarter, together with comparative estimates for the twelve previous quarters. The List of tables, pages 13-14, show the full range of data provided.

### CONCEPTS, SOURCES AND METHODS

**2** These are documented in *Australian National Accounts: Concepts, Sources and Methods* (5216.0). An updated version of the 5216.0 publication, along with other similar ABS publications, is now available on a CD-ROM product, which is entitled *Statistical Concepts Reference Library on CD-ROM* (1361.0). It was released in July 1996.

### ACCURACY OF QUARTERLY ESTIMATES

**3** Estimating for a period of less than one year presents special problems. It is often difficult to adhere strictly to definitions used in annual estimates when deriving quarterly ones. This is particularly the case for the quarterly measure of income, because it is not always possible to match the value of production for a quarter with the cost incurred in that production. Difficulties are also encountered in obtaining detailed data for short periods and in preparing consistent estimates from different sources with different accounting procedures and periods. Furthermore, the quarter-to-quarter growth in seasonally adjusted terms is very sensitive to the timing of recording a transaction. If the recording of a transaction is delayed by one quarter, seasonally adjusted movements will be distorted for three consecutive quarters. All these problems affect the accuracy of the current and constant price estimates and should be taken into account in interpreting the estimates.

### REVISIONS

**4** Most figures are subject to revision as more complete and accurate information becomes available. The revisions are of two types: those made to recent quarters and those made as a consequence of a redistribution across all quarters within a year following revisions to annual totals. Major revisions made this quarter are discussed on page 2.

### TREND ESTIMATES

**5** Given the qualifications regarding the accuracy and reliability of the quarterly national accounts, the Australian Bureau of Statistics (ABS) considers that trend estimates provide the best guide to the underlying movements, and are more suitable than either the seasonally adjusted or original data for most business decisions and policy advice.

**6** A trend estimate is obtained by removing the irregular component from the seasonally adjusted series. For estimates in this publication, it is calculated using a centred 7-term Henderson moving average of the seasonally adjusted series. Estimates for the three most recent quarters cannot be calculated using this centred average method; instead an asymmetric average is used. This can lead to revisions in the trend estimates for the last three quarters when data become available for later quarters, even if none of the original data for earlier quarters has changed.

**7** If a series has a high 'irregular' component, then the trend estimates will be subject to greater revision for the latest few quarters as data become available for subsequent quarters than would otherwise be the case. However, it is important to note that this does not make the trend series inferior to the seasonally adjusted or original series. In fact, in such cases the effect of the irregular component on overall movements is likely to be even more marked in the seasonally adjusted and the original estimates than in the trend series.

## EXPLANATORY NOTES

---

### TREND ESTIMATES *continued*

**8** For more information about ABS procedures for deriving trend estimates and an analysis of the advantages of using them over alternative techniques for monitoring trends, see *A Guide to Interpreting Time Series — Monitoring 'Trends': an Overview* (1348.0) or contact the Assistant Director, Time Series Analysis on (06) 252 6345.

Two feature articles which have appeared in the ABS monthly publication *Australian Economic Indicators* (1350.0) may also be of interest:

- *Picking Turning Points in the Economy* (April 1991), and
- *Smarter Data Use* (March 1992).

### IMPLICIT PRICE DEFULATOR (IPD)

**9** The quarterly implicit price deflators (IPDs) are derived by dividing seasonally adjusted and trend current price estimates by the corresponding constant price estimates.

Movements in IPDs can be greatly affected by changes in the physical composition of the aggregates and their components. For this reason, quarterly IPDs derived from seasonally adjusted or trend data are preferred to those using original data. The seasonal adjustment process itself is also a possible source of distortion. For further information see Appendix VI of *Australian National Accounts: Concepts, Sources and Methods* (5216.0).

### SEASONAL ADJUSTMENT:

#### GENERAL METHOD

**10** Data that are affected by seasonal factors are adjusted to remove the effects of these factors. The general methods for doing so are described in Appendix I of *Australian National Accounts: Concepts, Sources and Methods* (5216.0). Three important points should be noted here:

- The methods used in seasonal adjustment do not force the sum of the adjusted estimates for each quarter of a year to equal the original annual total.
- Where constant price estimates have no apparent seasonality in their implicit price deflators, the estimates are adjusted using the corresponding factors for current price estimates.
- Special methods have been used to adjust some components of gross farm product. These concern the adjustment of crop production where production/harvest only occurs in a couple of quarters each year. In these instances, the output for each financial year is distributed equally over the four quarters.

### MEASURES OF GDP

#### GDP(I)

#### INCOME APPROACH

**11** GDP(I) is the sum of factor incomes, consumption of fixed capital (depreciation) and net indirect taxes. The preferred current price measure of GDP is GDP(I). It is the overall measure which is consistent with subsidiary measures such as national income and the other consolidated tables (such as the national income and outlay account). GDP(I) also provides the base year benchmarks for the constant price estimates of GDP(P). Constant price estimates of GDP(I) are derived by deflating current price estimates of GDP(I) by the implicit price deflator of GDP(E).

#### GDP(E)

#### EXPENDITURE APPROACH

**12** GDP(E) is the sum of all final expenditures, changes in stocks, and exports less imports. Constant price estimates of GDP(E) are the sum of all these components at average 1989–90 prices.

#### GDP(P)

#### PRODUCTION APPROACH

**13** GDP(P) is calculated as the market value of goods and services produced by an industry (i.e. gross output) less the cost of goods and services used in the productive process (i.e. intermediate consumption). Constant price estimates of GDP(P) are the sum of constant price estimates (at average 1989–90 prices) for each industry.

## EXPLANATORY NOTES

---

### MEASURES OF GDP *continued*

GDP(A)  
THE AVERAGE

**14** While the three measures above are identical in concept, they can differ significantly in practice, especially in the short term, because of the different data sources used for each measure. Using the average of the three, GDP(A), smooths out these differences. GDP(A) is considered by the ABS to be the most satisfactory indicator of short-term seasonally adjusted or trend growth (see the Feature Article in the June quarter 1990 issue of *Australian National Accounts: National Income and Expenditure* (5206.0)).

### ANALYSIS OF CONTRIBUTIONS TO GROWTH

**15** Tables 6 and 7 present analyses of the contribution provided by each major component to the percentage change in trend and seasonally adjusted estimates of constant price GDP(I). The figures in each table are additive within each quarter, unlike the percentage changes shown in other tables in this publication. The formula used to calculate the contribution of each aggregate to the growth in GDP is:

$$\frac{A(t) - A(t-1)}{GDP(t-1)} \times 100$$

where

$A(t)$  = value of aggregate A in quarter under consideration

$A(t-1)$  = value of aggregate A in preceding quarter

$GDP(t-1)$  = value of GDP in preceding quarter.

### TERMS OF TRADE

**16** There are several ways of measuring the terms of trade. In this publication, the following index is used :

$$\frac{\text{Implicit price deflator for exports of goods and services}}{\text{Implicit price deflator for imports of goods and services}} \times 100$$

Estimates of the terms of trade are shown in Tables 11, 12, 18, 19, 68 and 69.

### REAL GROSS DOMESTIC INCOME

**17** GDP at constant prices is a measure of the volume of goods and services produced in Australia. If the terms of trade change significantly over the period of comparison, then this measure of real GDP will not accurately reflect the change in real purchasing power of the income generated by domestic production. (See the *Technical Note* included in the September 1993 issue of this publication for a more detailed discussion.) A better measure of the real purchasing power of income generated by domestic production is GDP(I) at average 1989–90 prices adjusted for the terms of trade effect, which is referred to as *real gross domestic income* (or real GDI). The following adjustment is made to GDP(I) at constant prices to obtain an estimate of real GDI:

- exports of goods and services at current prices are deflated by the implicit price deflator for imports of goods and services
- the actual constant price value of exports is then deducted from this value, and
- the resultant terms of trade adjustment is then added to GDP(I) at constant prices to give real GDI presented in Tables 68 and 69.

## EXPLANATORY NOTES

---

### GROSS PRODUCT PER UNIT OF LABOUR INPUT

**18** Indexes of constant price gross product per person employed and per hour worked are commonly referred to as measures of labour productivity. However, it should be noted that these indexes reflect not only the contribution of labour to changes in product per unit of labour, but also the contribution of capital and other factors (such as managerial efficiency, economies of scale, etc.).

**19** When analysing labour productivity indexes it is critical to note that they are subject to the vagaries of the growth (or business) cycle as well as the effects of any measurement error in either output or labour input. Differences in the amplitude and phase of the output and input cycles can result in labour productivity indexes deviating substantially from their longer-term trend. Analytical work undertaken within the ABS suggests that movements in employment and hours worked tend to lag movements in GDP. Over a 20 year period, the lag at turning points in the growth cycle varied between zero and four quarters, with the average being between two and three quarters. The implication is that, in the period of the growth cycle when the growth in output is declining, indexes of labour productivity are likely to decline, particularly if rapid growth in GDP is abruptly ended. Conversely, labour productivity indexes are likely to grow strongly when the economy comes out of a cyclical trough.

**20** A simple way to estimate the underlying trend in labour productivity is to compare the values of a labour productivity index spanning a growth cycle e.g. from the peak of one growth cycle to the peak of another. Note that such estimates rest on the assumption that labour is being utilised to the same degree at each growth cycle peak. Average annual growth rates, over growth cycles, of estimates of gross product per hour worked in the *market* and *non-farm market* sectors are shown in *Australian National Accounts: Multifactor Productivity* (5234.0).

### MARKET AND NON-FARM MARKET SECTORS

**21** The estimates of gross product at constant prices for five industries: Property and business services; Government administration and defence; Education; Health and community services; and Personal and other services are derived either wholly or primarily by using either deflated input cost data or hours worked as indicators of output. As such, the estimates cannot adequately reflect changes in productivity. For the purpose of measuring changes in productivity, it is therefore preferable that these industries be excluded. The constant price product of a group of industries referred to as the *market sector* is defined to be GDP(P) *less* the above six industries, *less* Ownership of dwellings (for which capital stock is used as the indicator of output), *plus* the imputed bank service charge related to the 'non-market' industries.

**22** A second industry group, referred to as the *non-farm market sector*, comprises the market sector *less* Agriculture, forestry and fishing. Productivity estimates derived for this group are free of the effects caused by the volatility of agricultural production due to changing seasonal conditions.

### INDEXES OF EMPLOYMENT AND HOURS WORKED

**23** The quarterly employment indexes used to derive the gross product per person employed indexes comprise all labour engaged in the production of goods and services and include not only civilian wage and salary earners but also employers; self-employed persons; persons working one hour or more without pay in a family business or on a farm; and members of the Australian defence forces. For details of how the employment and hours worked estimates are formed, refer to Section 23 of *Australian National Accounts: Concepts Sources and Methods* (5216.0), and also Section 4 of the Information Paper *Australian National Accounts: Introduction of Constant Price Estimates at Average 1989-90 Prices* (5243.0) which describes changes in methods introduced in conjunction with the rebase of constant price estimates to average 1989-90 prices.

## EXPLANATORY NOTES

---

PRIVATE NON-FARM STOCKS  
TO SALES RATIO

**24** The ratio is presented in tables 68 and 69. The denominator of this ratio, in current price terms, is defined as :

- private final consumption expenditure on goods
- *plus* private gross fixed capital expenditure on dwellings, non-dwelling construction and equipment
- *plus* public gross fixed capital expenditure
- *plus* exports of non-rural goods.

IMPORTS TO SALES RATIO

**25** The ratio is merchandise imports (ie total imports of goods) to sales (as defined in paragraph 24 above). This ratio is presented in tables 68 and 69.

HOUSEHOLD SAVING RATIO

**26** This is the ratio of household saving to household disposable income, where household saving is the difference between household disposable income and private final consumption expenditure. The ratio is a memorandum item in tables 27 and 28 and is also shown in table 67.

GDP(A) PER CAPITA

**27** This is the ratio of GDP(A) to an estimate of the resident Australian population. For all but the most recent quarters, the resident population data are drawn from *Australian Demographic Statistics* (3101.0). For the most recent quarters, estimates are made by extrapolating from the latest available data.

RELATED PUBLICATIONS

**28** In addition to the publications already mentioned, others of interest include:

- *Australian National Accounts: National Income, Expenditure and Product* (5204.0)—annual
- *Australian National Accounts: State Accounts* (5220.0)—annual
- *Australian National Accounts: Capital Stock* (5221.0)—annual
- *Australian National Accounts: Financial Accounts* (5232.0)—quarterly
- *Australian National Accounts: Multifactor Productivity* (5234.0)—annual
- *Australian National Accounts: National Balance Sheet* (5241.0)—annual
- *A Guide to the Australian National Accounts* (5235.0).

**29** Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Release Advice are available from any ABS office.

SYMBOLS AND OTHER USAGES

- nil  
.. not applicable  
n.a. not available

The ABS publishes a wide range of information on Australia's economic and social conditions. A catalogue of publications and products is available from any of our offices (see below).

#### INFORMATION CONSULTANCY SERVICES

Information tailored to special needs of clients can be obtained from the Information Consultancy Service available at ABS Offices (see below).

#### ABS PRODUCTS

A large number of ABS products is available from the ABS Bookshops (see below). The ABS also provides a subscription service – you can telephone the ABS Subscription Service Australia wide toll free on 1300 3663 23.

#### ELECTRONIC SERVICES

A large range of data is available via on-line services, diskette, magnetic tape, tape cartridge and CD ROM. For more details about our electronic data services, contact any ABS office (see below) or e-mail us at:
