JUNE QTR KEY POINTS

BALANCE OF PAYMENTS

- The trend estimate of the balance on current account is a deficit of \$7,077 million, up \$507 million, or 8%, on the deficit for the March quarter 1998.
- In seasonally adjusted terms, the current account deficit fell \$801 million, or 11%, to \$6,518 million. This decrease is due to the deficit on the goods trade decreasing \$620 million to \$1,555 million and a small decline in the net income deficit.
- The balance on financial account rose \$1,652 million. Turnarounds, from net outflows to net inflows in the June quarter, in direct investment and other investment in the June quarter totalled \$9,327 million, partly offset by the turnaround to net outflow on reserve assets and a fall in the net inflow on portfolio investment.

INTERNATIONAL INVESTMENT POSITION

- Australia's net IIP rose \$2 billion to a net liability of \$324 billion. Net equity inflows added \$10 billion, and net debt outflows subtracted \$3 billion. Price and exchange rate effects on equity and debt subtracted nearly \$4 billion from net liabilities.

FORTHCOMING ISSUES

<i>ISSUE (Quarter)</i>	<i>RELEASE DATE</i>
September 1998	1 December 1998
December 1998	2 March 1999
• •	

CHANGES IN THIS ISSUE

In original terms, revisions since the last issue of this publication have reduced the deficit on current account by \$479 million in 1996–97 and by \$401 million in the 9 months to March 1998. These revisions are due mainly to revised investment income estimates. There have also been minor net credit revisions to estimates of services in each year from 1991–92 to 1995–96 totalling \$75 million over the five year period.

The inflow on the net financial account has been revised downwards by \$202 million in 1996–97 and by \$2,071 million for the 9 months to March 1998.

The seasonally adjusted and trend estimates of the balance on current account and its components have been revised in this issue of the publication as a result of the annual seasonal reanalysis. The reanalysis takes account of additional information that has become available since the previous reanalysis. For information about the availability of seasonal factors for 1998–99 refer to paragraph 10 of the Explanatory Notes.

CHANGES IN NEXT ISSUE

Chain Volume Measures

Commencing with the September quarter 1998 issue of this publication, the constant price estimates of goods and services will be replaced by annually-reweighted, chain Laspeyres volume measures. In addition, the fixed-weighted price indexes will be replaced by annually-reweighted, chain Laspeyres price indexes. These changes are part of the ABS implementation in the September quarter 1998 of revised international standards for national accounts statistics (*System of National Accounts (SNA 93)*).

Appendix 1 of this issue presents the latest experimental estimates of both the chain volume measures and the chain price indexes, with weights in respect of the 1995–96 reference year, in the format that will be used in future issues.

In late October 1998, the ABS will re-release the June quarter national accounts compiled under new standards. At that time the balance of payments components shown in Appendix 1 will be re-referenced to 1996–97 and re-released electronically.

For further details see Appendix 1 on page 79.

New data on the currency and maturity of foreign debt

The September quarter 1998 issue of this publication will introduce a new regular table, table 37, providing for the first time both foreign debt assets and foreign debt liabilities cross classified by currency and residual maturity. The Exchange Rates table and all following tables will be renumbered.

Appendix 2 of this issue presents data, for the March quarter 1998, on currency and residual maturity in the format in which the information will appear in future issues, together with explanatory notes. The September quarter 1998 issue will include data only for the June quarter 1998, although electronic releases will carry data from September quarter 1996.

For further details see Appendix 2 on page 92.

CHANGES IN NEXT ISSUE

continued

Reclassification of Central Borrowing Authorities

Central Borrowing Authorities (CBAs) were set up by State and Territory Governments to centralise the borrowing of both the general government and the public trading corporations within each State or Territory. Up until now, CBAs have been allocated to the general government sector in ABS macroeconomic statistics.

In light of revised international statistical standards, and in recognition of the financial intermediation role performed by CBAs, CBAs are being reclassified to the financial corporations sector in all relevant ABS statistics. Commencing with the September quarter 1998 issue of this publication, the cross-border financial transactions and international investment position (IIP) of the CBAs will be reclassified from general government to the residual 'other sectors' category in most tables for the financial account and the IIP. However, in tables 34 to 36, which present foreign debt transactions, levels and the associated investment income flows, a separate subsector for CBAs will be shown within the broader subsector for 'other financial corporations' of the public sector.

New measures for financial intermediation services indirectly measured

One of the recommendations in SNA93 is for the measurement of the indirectly charged services of financial intermediaries which is implicit in the spread between the interest rates earned by depositors and the interest rates levied on borrowers. The implicit service fee is called financial intermediation services indirectly measured (FISIM).

The estimation of FISIM for the balance of payments means that some of the interest earned by Australian financial intermediaries from lending abroad represents a service charge, rather than interest. Measuring the service fee and reclassifying the amount to Australia's exports of financial services will be offset by a reduction in investment income credits. Similarly, Australian financial intermediaries earn implicit fees on the deposits of non-residents, which will be reclassified to exports of financial services with an offsetting increase in investment income debits earned by non-residents on those deposits. Foreign financial intermediaries earn similar fees from Australian depositors and borrowers.

However, the amounts of FISIM involved in Australia's cross-border intermediation are very small, since FISIM is not applicable on the issue of securities, or between financial intermediaries, or between non-financial corporations, or between parties in a direct investment relationship. In 1997-98, FISIM credits and debits were both only \$0.1 billion.

The revised services and investment income estimates will be included in the re-release of the June quarter 1998 national accounts in late October 1998, and on an ongoing basis from the September quarter 1998 issue of this publication.

BALANCE OF PAYMENTS

CURRENT ACCOUNT

The trend estimate of the balance on current account is a deficit of \$7,077 million in the June quarter 1998, an increase of \$507 million, or 8%, on the deficit for the March quarter 1998.

In seasonally adjusted terms, the current account deficit fell \$801 million, or 11%, to \$6,518 million. The balance on goods and services deficit fell \$560 million, reflecting a \$620 million decrease in the deficit on goods. The decrease in the deficit on goods reflects higher non-rural exports partly offset by higher capital goods imports. The other goods categories in both exports and imports were higher due to gold shipments, either for processing or in finished form.

Services credits and debits both increased in seasonally adjusted terms, with the deficit widening slightly in the June quarter. There was a decline in the deficit on income, mainly reflecting higher dividends on Australian foreign portfolio investment in equity securities.

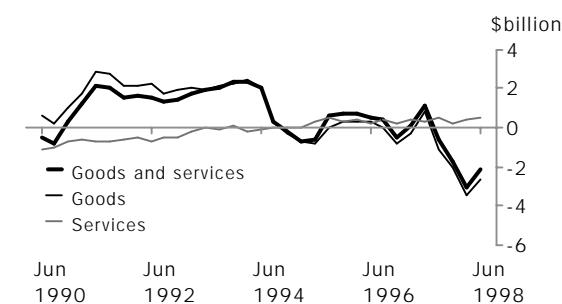

GOODS AND SERVICES

The trend estimate of the balance on goods and services is a deficit of \$2,249 million in the June quarter, an increase of \$574 million on the deficit for the March quarter.

In seasonally adjusted terms the deficit on goods and services at current prices was \$1,791 million, down \$560 million on the deficit in the March quarter 1998. In seasonally adjusted volume terms, the deficit on goods and services was \$2,138 million, a decrease of \$863 million on the deficit in the March quarter. The net services balance also improved in volume terms, with the surplus rising slightly. The goods deficit fell \$736 million reflecting stronger exports volumes and a small fall in import volumes.

The net decrease of \$863 million in the deficit on goods and services in volume terms would make a positive contribution of 0.7 percentage points to growth in the June quarter 1998 estimate of GDP(I) at average 1989–90 prices, assuming no significant revisions to the GDP(I) estimates for the preceding quarter. Excluding net fees for royalties and copyrights from the balance (for consistency with current standards used for the compilation of the national accounts), leaves the contribution to growth at a positive 0.7 percentage points.

BALANCE ON GOODS AND SERVICES(a)

(a) At constant prices, seasonally adjusted.

BALANCE OF PAYMENTS

CURRENT ACCOUNT *continued*

GOODS CREDITS

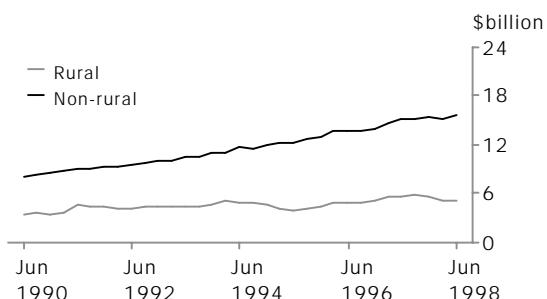

The goods credits trend rose less than 1% to \$22,316 million in the June quarter. Seasonally adjusted goods credits rose \$1,245 million (6%) to \$22,713 million, with volume and price both up 3%.

Rural goods (seasonally adjusted, current prices) were \$5,312 million, up 1% on the previous quarter due largely to a 2% rise in price partly offset by a 1% decline in volume. The largest rise was in cereals, up \$125 million (12%), reflecting an increase in volume. This was slightly offset by wool, down 7%, due largely to a 6% fall in volume.

Non-rural goods, in seasonally adjusted terms at current prices, rose \$909 million (6%), as a result of 3% rises in both volume and price. The largest rises were in transport equipment, up \$396 million (60%) reflecting volume rise; 'other' non-rural, up \$208 million (17%) due to a 14% rise in volume and a 3% rise in price; and coal, up \$131 million (5%) due mainly to an increase in volume.

'Other' goods credits (seasonally adjusted, current prices) rose \$266 million (14%), with non-monetary gold up \$280 million due to both volume and price increases.

GENERAL MERCHANDISE CREDITS(a)

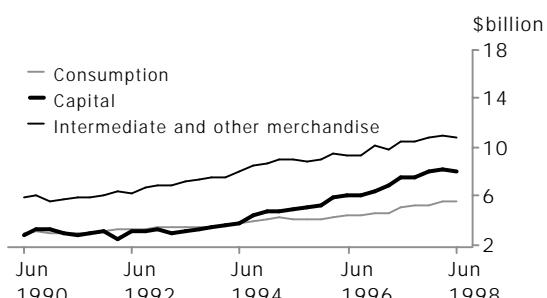

(a) At constant prices, seasonally adjusted.

GOODS DEBITS

The trend estimate of goods debits rose \$797 million (3%) to \$24,325 million in the June quarter. In seasonally adjusted terms, goods debits rose \$625 million (3%) to \$24,268 million, as a result of a 3% increase in price and a 1% fall in volume.

In seasonally adjusted current price terms, consumption goods rose \$79 million (1%), reflecting volume rise. Capital goods rose \$339 million (6%), with falling volume more than offset by rising price (9%). Intermediate and other merchandise goods were down slightly, with higher price (1%) offset by falling volume. 'Other' goods debits, in seasonally adjusted terms at current prices, rose \$338 million (29%), due to a rise in non-monetary gold, up \$131 million.

GENERAL MERCHANDISE DEBITS(a)

(a) At constant prices, seasonally adjusted.

BALANCE OF PAYMENTS

CURRENT ACCOUNT *continued*

SERVICES

The trend estimate of the services deficit decreased \$34 million to \$240 million in the June quarter, the third quarterly trend deficit after 5 quarters of surpluses. In seasonally adjusted terms, the net services deficit rose \$60 million to \$236 million.

Services credits, in seasonally adjusted terms at current prices, rose \$106 million (2%) to \$6,430 million, largely due to a rise in volume. At both current and constant prices, rises in travel and other services offset the fall in transportation services credits, which saw a 5% decline in volume in the quarter (freight down 18% on the high volume of the previous quarter, and non-freight down 3% in volume).

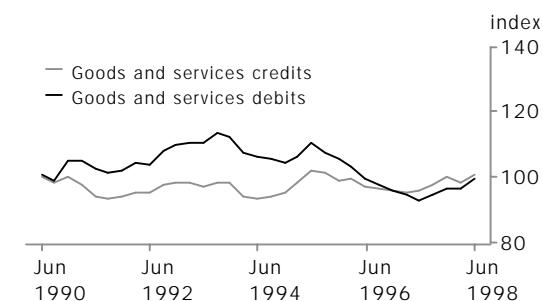

Services debits, in seasonally adjusted terms at current prices, rose \$166 million (3%) to \$6,666 million as a result of a 4% rise in price slightly offset by falling volume. In current prices, the increase was largely due to travel. In constant price terms, the increase in travel (up 1%) was more than offset by falls in transportation services (down 1%) and other services (down 3%).

IMPLICIT PRICE DEFULATOR

In seasonally adjusted terms the implicit price deflator (IPD) for total goods and services credits rose 2.4% between the March and June quarters. On a fixed weighted basis, credit prices rose 1.1%, indicating that compositional change within goods and services had a significant upward effect on the overall level of the IPD.

The IPD for total goods and services debits rose 3.3% in seasonally adjusted terms. On a fixed weighted basis, debits prices rose 2.4%, indicating that compositional change within goods and services debits had a significant upward effect on the overall level of the IPD.

IMPLICIT PRICE DEFULATOR

TERMS OF TRADE

Australia's seasonally adjusted terms of trade fell 0.9% resulting from a rise of 2.4% in the IPD for goods and services credits being more than offset by a rise of 3.3% in the IPD for goods and services debits. The trend estimate of the terms of trade fell for the third successive quarter, following a trend that had been rising since the March quarter 1994.

BALANCE OF PAYMENTS

CURRENT ACCOUNT *continued*

INCOME

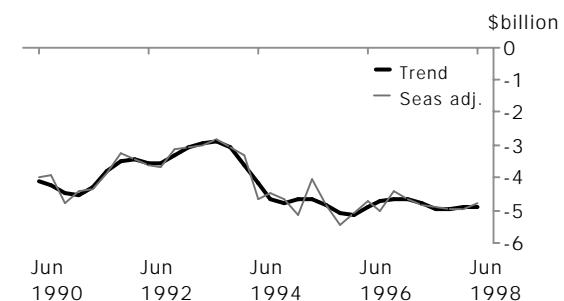

The trend estimate of the net income deficit fell marginally to \$4,877 million.

In seasonally adjusted terms, the net income deficit fell \$165 million (3%) to \$4,799 million in the June quarter. Income credits were up \$277 million (11%) at \$2,814 million, while income debits rose \$114 million (2%) to \$7,614 million.

In original terms, income credits rose \$217 million (9%) during the June quarter to \$2,735 million. This was mainly due to higher income on portfolio equity investment abroad (up \$166 million).

In original terms, income debits rose \$236 million (3%) to \$7,546 million, reflecting higher dividends on portfolio investment in Australian equity securities (up \$183 million).

NET INCOME

CURRENT TRANSFERS

The trend estimate of net current transfers rose \$28 million to a surplus of \$49 million in the June quarter.

In seasonally adjusted terms, net current transfers turned around from a deficit of \$5 million to a surplus of \$72 million in the June quarter. Current transfers credits rose \$27 million (3%) to \$926 million, while transfers debits fell \$49 million (5%) to \$854 million.

CAPITAL AND FINANCIAL ACCOUNT

CAPITAL ACCOUNT

In original terms, the capital account surplus was \$230 million, down 19% on the surplus recorded in the March quarter 1998. Capital transfers credits fell \$13 million (3%) to \$504 million, while capital transfers debits rose \$29 million (12%) to \$277 million.

FINANCIAL ACCOUNT

In original terms, the balance on financial account recorded a net inflow of \$6.7 billion, with a net inflow on equity (\$9.5 billion) and an outflow on debt (\$2.8 billion). This result was up \$1.7 billion on the net inflow recorded in the March quarter, with a \$4 billion turnaround, from inflow to outflow, in net debt being more than offset by a rise of nearly \$6 billion in net inflow on equity investment in the June quarter.

The turnarounds, from an outflow to an inflow, for both direct investment (\$3.7 billion) and other investment (\$5.6 billion) were partly offset by lower inflows on portfolio investment (down \$3.5 billion) and a turnaround, to outflow, of \$4.2 billion on reserve assets. The \$3.7 billion turnaround in direct investment was composed of both a strong rise in net new foreign direct investment in Australia and a lower rate of net new direct investment abroad.

INTERNATIONAL INVESTMENT POSITION

Australia's net international investment position at 30 June 1998 was a net foreign liability of \$324 billion. This was up \$2 billion (1%) on the position a quarter earlier and resulted from:

- net transactions of \$7 billion;
- price changes of -\$2 billion;
- no net exchange rate changes; and
- other adjustments of -\$2 billion, most of which relate to price and exchange rate impacts on reserve assets which are not yet separately available.

The level of net foreign liabilities consisted of:

- net debt of \$222 billion (68%); and
- net equity liabilities of \$102 billion (32%).

During the June quarter 1998, the level of net foreign debt fell slightly (down 1%), while net equity liabilities increased by 4%.

BALANCE OF PAYMENTS

In original terms, the balance on current account is a deficit of \$23.9 billion for the financial year 1997–98, an increase of \$6.9 billion, or 40%, on the deficit recorded for 1996–97.

The increase in the deficit was largely due to:

- a turnaround of \$5.2 billion, from a surplus to a deficit, in the goods trade (the 9% rise in exports was more than offset by the 16% rise in imports). All of the general merchandise exports categories recorded rises except cereals (down 14%) and transport equipment (down 6%). However, the year on year comparison for total goods is affected by exports of both Reserve Bank gold (\$1.8 billion) and a naval frigate (\$0.5 billion) in the June quarter 1997, which were partially offset by further exports of Reserve Bank gold (\$0.7 billion) in the September quarter 1997;
- a turnaround of \$1.1 billion from a surplus to a deficit, in net services (services credits increased 5%, while services debits rose 9%); and
- the net income deficit rising \$0.6 billion, with the 17% increase in income credits being more than offset by the 7% rise in income debits.

The balance on financial account recorded a net inflow of \$21.1 billion in 1997–98, an increase of \$3.9 billion (23%) on the net inflow for 1996–97. The increased inflow was composed of:

- a \$1.3 billion fall in net direct investment inflow, with a 42% increase in the net outflow on direct investment abroad only partly offset by a 10% increase in the net inflow on direct investment in Australia;
- a \$8.3 billion (62%) increase in net inward portfolio investment;
- a \$7.8 billion turnaround, from inflow to outflow, in other investment; and
- a \$4.6 billion fall in the outflow on reserve assets.

INTERNATIONAL INVESTMENT POSITION

Australia's net international investment position at 30 June 1998 was a net foreign liability of \$324 billion. This was up \$13 billion (4%) on the position a year earlier and resulted from:

- net transactions of \$21 billion;
- price changes of -\$6 billion;
- no net exchange rate changes; and
- other adjustments of -\$2 billion, most of which relate to price and exchange rate impacts on reserve assets in the June quarter which are not yet separately available.

During 1997–98, the level of net foreign debt rose by \$9 billion (4%), while net equity liabilities rose by \$4 billion (4%). However, the ratios of net equity and net debt to GDP at 30 June 1998 were virtually unchanged on the ratios a year earlier.

MEASURING PORTFOLIO INVESTMENT

INTRODUCTION

- 1** Changes in international capital markets during the 1980s opened new possibilities for raising capital, investing, and hedging risk; and a wide range of new participants emerged in these markets. The increasing importance of borrowing and lending in the form of securities led to a surge in the issuance of bonds in international markets. Banks and securities firms expanded their operations into foreign markets after the deregulation of security markets in many countries. New channels opened through which securities could be bought and sold in foreign markets, and cross-border securities trading increased sharply. Institutional investors such as pension funds, insurance companies and investment trusts diversified heavily into foreign securities, as restrictions on investment activities were lifted in many countries, notably Japan. Increasingly, large investors dealt in foreign markets or directly with foreign issuers of securities. The trend to diversified portfolios also increased considerably the demand by private individuals for foreign securities.
- 2** Faced with these changes, balance of payments compilers throughout the world have found it increasingly difficult to measure portfolio capital flows. At the global level, there were large imbalances in the components of portfolio investment throughout much of the 1980s and 1990s, partly because the activities of new participants were not sufficiently covered by the statistical data sources used. The extent of these global imbalances was first highlighted by the report, in 1992, of the International Monetary Fund's (the IMF's) Working Party on the Measurement of International Capital Flows. This study found that recorded portfolio liabilities far outweighed portfolio assets at the worldwide level. Theoretically, external aggregate assets should equal external aggregate liabilities if perfectly measured. However, external assets were understated by as much as \$US400 billion even in 1988, and judging from available transactions data collated by the IMF, the understatement appears to have further increased in the 1990s.
- 3** Concerned by such discrepancies, the IMF Committee on Balance of Payments Statistics decided in 1993 to promote the idea of a Coordinated Portfolio Investment Survey (CPIS). While some countries, such as Australia, already conducted surveys to measure portfolio investment, there had not been a coordinated international approach. The proposed CPIS was to be coordinated both in terms of timing and design, and to spread best statistical practice among countries. Some 30 countries agreed to participate in the CPIS which was conducted at the reference date of end-December 1997.
- 4** This article outlines the main features of the CPIS, presents the results obtained from the Australian collection, and indicates where future action will occur.

PURPOSE OF THE CPIS

5 The purpose of the CPIS has been to improve estimates of portfolio investment in the form of equity and long term debt securities. Specifically, the objectives were :

- To collect comprehensive information, with geographical detail, on the stock of cross-border equities and long term bonds and notes held by Australian residents for use in the compilation or improvement of international investment position (IIP) statistics on portfolio investment capital. The IIP statistics, in turn, can provide information to check the coverage of recorded estimates of portfolio investment capital flows, and of the associated investment income transactions recorded in the balance of payments.
- To exchange, so far as confidentiality constraints permit, the bilateral statistics. When the results of the CPIS become available, the participating countries, with the assistance of the IMF's Statistics Department, plan to exchange these statistics among themselves and with other countries. By exchanging comparable statistics and aggregating them, participating countries should be able to improve their estimates of non-resident holdings of their portfolio investment liabilities as well as associated capital flows and investment income data. Information on the geographic distribution of non-resident creditors also becomes known.

CONCEPT OF PORTFOLIO INVESTMENT

6 The compilation and presentation of ABS international investment position statistics conform with the prevailing international statistical standard, namely the IMF's *Balance of Payments Manual, Fifth Edition* (BPM5). These statistics are classified in several ways with the primary classification based on type of investment. There are four broad categories—direct investment, portfolio investment, other investment and reserve assets.

7 *Direct investment* is a category of international investment that reflects the objective of an investor in one economy (the direct investor) obtaining a significant on-going interest in an enterprise resident in another economy (the direct investment enterprise). The significant on-going interest implies a degree of influence by the direct investor in the management of the direct investment enterprise. In BPM5, evidence of this significant interest is defined as ownership of 10% or more of the equity of a direct investment enterprise. *Portfolio investment* is cross-border investment in equity and debt securities (other than direct investment). *Reserve assets* are those financial instruments available to and controlled by the Reserve Bank of Australia for balance of payments management purposes, such as financing imbalances and managing exchange rates. *Other investment* is a residual group that comprises many different kinds of investments.

8 Within these categories further classification levels occur based upon factors relating to general analytical usefulness. For example for portfolio investment, the type of instrument is the primary classification (i.e. equity and debt securities). Corporate equities include company shares, investment fund units, and documents denoting ownership of equity (for example, American Depository Receipts). Debt securities are broken down into bonds and notes, money market instruments, and financial derivatives. Bonds include marketable bonds, debentures, and notes that have an original contractual maturity of more than one year. Long-term negotiable certificates of deposit are also treated as bonds.

9 The focus of the CPIS was on the equity securities and the long term debt securities (i.e. bonds and notes) classified to portfolio investment.

CPIS METHODOLOGY

10 To assist countries with limited experience in the collection of portfolio investment data, the IMF prepared a reference document, *Coordinated Portfolio Investment Survey: Survey Guide*, which was released in August 1996. The IMF noted that surveys could primarily target end-investors, custodians (that is, financial institutions that administer or manage non-resident securities on behalf of residents) or a combination of both. In addition, the IMF noted that data could be collected either on an *aggregated* or on a *security-by-security* basis. The former approach, relies on the survey respondents to aggregate, allocate and value all of their international portfolio investment. By contrast, in the latter approach, respondents are asked for details of the quantity and other information about each security held, while data on the market value of each of these securities could be determined from a suitable commercial database which prices securities. Although the estimates obtained through either approach are conceptually the same, collecting data on a security-by-security basis has the potential of providing more information on, for instance, currency attribution, yields on securities, etc.

11 Since Australia already collects much of the relevant data required through the quarterly Survey of International Investment (SII) from end-investors on an aggregate basis, there was only limited additional information to obtain.

12 However, to improve the quality of the geographical detail of portfolio investment assets that were to be obtained from the December quarter 1997 SII, the existing sample survey was supplemented by additional resident enterprises that were known to have relevant portfolio investment activity. As a consequence, the totals for portfolio investment in foreign equity and long term debt securities obtained from the CPIS are slightly different from the corresponding estimates obtained from the regular quarterly survey, where a coverage estimate is made for the small contributors that are not included in that regular survey.

13 In addition, during the December quarter 1997 survey, respondents were urged to take particular care in determining the country attribution of securities investments and to identify the residence of the issuer rather than report the residence of the non-resident fund manager which has been occurring in past reporting in the SII. As a result, the country data obtained are of a high quality and are more reliable than similar data from previous surveys.

14 CPIS data requirements are consistent with the SII in all aspects except for the treatment of securities lending and repurchase agreements. The SII treats securities exchanged under these agreements as having changed ownership while the CPIS does not. For this reason, three supplementary questions were added to the December quarter 1997 SII to separately identify the impact of securities lending and repurchase agreements as at the end of the quarter.

RESULTS OF THE SURVEY

15 Table F1.1 shows that, at 31 December 1997, the level of Australian portfolio investment abroad, as measured through the CPIS, stood at \$50,360 million for equity securities and \$11,413 million for long term debt securities. Australian residents' investment in foreign equity securities was dominated by investment of \$21,893 million (or 43%) in US equities. Other significant holdings of equity securities were in the UK, \$7,783 million (15%); countries in the European Union (apart from the UK), \$8,296 million (16%); and Japan, \$5,386 million (11%). Australia's investment abroad in the form of long term debt securities was also heavily focused in the USA (\$5,627 million or 49%), while Germany (\$1,192 million) and the UK (\$1,135 million) each accounted for a further 10%.

RESULTS OF THE SURVEY *continued*

16 Due to the reasons outlined in paragraphs 12–14 above, the data shown for total equity securities and total long term debt securities in Table F1.1, differ slightly from the corresponding data shown in Table 32 on page 60 of this publication.

FUTURE DIRECTION

17 The IMF will act as a central clearing house for the compilation of aggregate data from those countries which have undertaken the CPIS and will supplement it with additional data in respect of central bank holdings. The IMF will provide the resultant data to participating countries as well as non-participating countries. Confidentiality constraints will be observed. By exchanging comparable statistics, countries should be able to improve their estimates of non-resident holdings of their portfolio investment liabilities as well as associated capital flows and investment income data.

18 This international project is recognised as an important initial step in being able to understand and identify gaps in statistical collections and methodologies for measuring portfolio investment. It is likely that the IMF will consider recommending that an international joint project such as this will be repeated in the future.

19 For further information on the Coordinated Portfolio Investment Survey, contact Betty Gruber, Director of International Investment Section, on (02) 6252 5601 or Fax (02) 6252 6164.

FOREIGN OWNERSHIP OF EQUITY

INTRODUCTION

1 This article updates the analysis of foreign ownership of Australian equity presented in the March quarter 1997 issue of *International Investment Position, Australia* (5306.0). The data presented here are sourced from:

- for rest of the world holdings of equity, Table 33 of this publication and more detailed unpublished data underlying the published aggregates; and
- for total and sectoral aggregates of equity on issue, Table 35 of the March quarter 1998 issue of *Australian National Accounts: Financial Accounts* (Cat. No. 5232.0).

2 A brief explanation of how the financial accounts can be used to derive estimates of foreign ownership of equity in Australian enterprise groups is provided below. For a more detailed explanation, see the earlier article published in the June quarter 1992 issue of *International Investment Position, Australia* (Cat. No. 5306.0). That article also explains the relationship between these measures and measures derived from earlier foreign participation studies.

3 The data cover financial instruments classified as equity, being listed and unlisted shares and units in trusts. Instruments convertible to equity such as convertible notes are not treated as equity until converted. Also ownership of property by non-residents and ownership of Australian branches of foreign companies are treated as equity for the purposes of these statistics. The data for amounts on issue for each sub-sector are consolidated by excluding amounts held by related companies in the same sub-sector. Market valuations are used where possible; for the cases where market values are not available, net asset value (total assets less non-equity liabilities and less the paid up value of non-voting shares) has been used as a proxy. A non-resident is defined as any individual, enterprise or other organisation ordinarily domiciled in a country other than Australia. For further definitions of the concepts and methods employed in compiling the source data see the explanatory notes to *Australian National Accounts: Financial Accounts* (Cat. No. 5232.0) and *Balance of Payments and International Investment Position, Australia: Concepts, Sources and Methods* (Cat. No. 5331.0) scheduled for release in late 1998.

4 By expressing the value of equity issued by a particular sector to the rest of the world (non-residents) as a percentage of the total value of all equity issued by that sector, it is possible to derive an estimate of the percentage of foreign ownership in that sector. For example, at 31 March 1998, equity held by 'Rest of World' in banks was \$26.4 billion, or 26% of the total equity of \$101.2 billion issued by banks. Likewise, an estimate of total foreign ownership of equity in all Australian enterprises can be derived by summing the equity held by non-residents across all sectors and dividing this by the total value of equity issued by all sectors. Estimates of foreign ownership by sectors are shown in Table F2.1.

ANALYSIS OF RESULTS

5 Table F2.1 shows that the value of equity on issue by Australian enterprise groups at 31 March 1998 stood at \$864.8 billion. Just over half of this total (51%) was shares or equivalent equity interests issued by private corporate trading enterprises. General government, the Reserve Bank and public trading enterprises collectively accounted for a further 22% of total equity issued, while lesser amounts were issued by banks (12% of the total); non-bank deposit-taking institutions (2%); and other financial sub-sectors, including life offices and superannuation funds (13%).

6 Of the total equity on issue at 31 March 1998, non-residents held equity valued at \$233.9 billion (27%), while residents held \$630.9 billion (73%).

FOREIGN OWNERSHIP OF EQUITY *continued*

ANALYSIS OF RESULTS *continued*

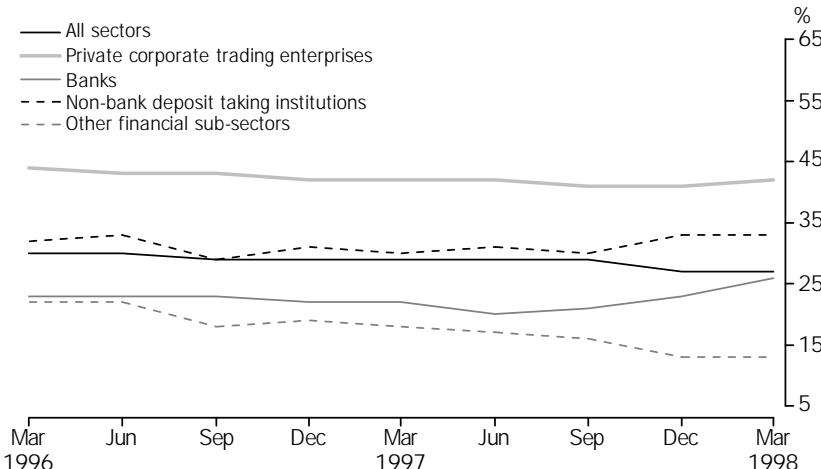

7 During the past few years, the proportion of equity held by non-residents has been relatively stable at around 29%. However this proportion has decreased to 27% since 30 September 1997, largely due to significant increases in the equity issued by Commonwealth public trading enterprises; by life offices and superannuation funds; and by other financial institutions, which, by and large, have had limited availability to non-residents to date.

8 When analysed by sector, it can be seen that the proportion of equity held by non-residents in private corporate trading enterprises at 31 March 1998 was 42% and has changed little during the past few years. The value of equity on issue by private corporate trading enterprises at 31 March 1998 increased 12% on the previous year.

9 Although both the amount issued by banks and the amount of bank equity held by non-residents rose markedly over the period 30 June 1994 to 31 March 1998, the proportion of non-resident holdings of the total equity issued by banks fell from 23% at 30 June 1994 to 20% at 30 June 1997, before increasing to 26% at 31 March 1998.

10 The value of equity issued by life offices, superannuation funds and other financial institutions at 31 March 1998, increased by 78% on a year earlier, due mainly to the demutualisation of AMP, and privatisations such as Telstra. (Telstra shares formerly held by the Commonwealth Government were sold to a trust which is classified to the Other Financial Institutions sub-sector. The trust is the entity which issues instalment receipts to the public.) The proportion held by non-residents over this period, however, has fallen from 18% to 13%, largely reflecting the restrictions on the proportion of foreign ownership in Telstra and the fact that AMP was not listed on the Australian Stock Exchange (ASX) as at 31 March 1998.

FOREIGN OWNERSHIP OF AUSTRALIAN ENTERPRISE GROUPS BY SECTOR

PROBLEMS WITH THE DATA THAT MAY IMPACT ON THE ANALYSIS

11 Data for equity on issue for unlisted corporations is of lesser quality than the data supplied by ASX for listed corporations. Data for unlisted corporations are compiled from returns supplied in the ABS Survey of Financial Information, ABS Survey of International Investment, selected annual reports and estimates synthesised from analysing residual items in demand and supply tables for the various share markets.

12 In terms of the analysis undertaken here, errors in the estimated market value of equity on issue will impact on the accuracy of estimates of the proportion of that equity owned by non-residents.

REGIONAL ANALYSIS

13 As shown in Table F2.2, the value of holdings of equity in Australian enterprise groups by non-residents can be further disaggregated according to the country of residence of the immediate holder. This disaggregation has been done as at 30 June each year. However, regional data is not yet available for the end of the latest financial year.

14 At 30 June 1997, UK residents owned \$72.9 billion (or 34%) of the foreign-owned equity in Australian enterprise groups, accounting for 10% of total equity on issue. At the same point in time, USA residents owned \$64.1 billion, or 30% of the foreign equity holdings in Australian enterprise groups, while residents of Japan owned a further \$14.6 billion (7%). The USA and Japanese holdings accounted for 9% and 2% respectively of total equity on issue.

15 UK residents owned 34% of the total non-resident equity investment in Australian private corporate trading enterprises on issue at 30 June 1997; while residents of the USA and Japan owned 31% and 6% respectively. The UK holdings accounted for 14% of the total equity of Australian private corporate trading enterprises on issue, while the US and Japanese holdings accounted for a further 13% and 3% respectively.

16 The UK, USA and Japan generally have the biggest participation rates within all other sectors, although their respective contributions vary significantly across these sectors. For example, residents of the UK owned 42% of the total non-resident equity investment in Australian banks, but only 4% of the non-resident equity in non-bank deposit taking institutions. Although, residents of Japan owned 29% of the total non-resident equity investment in non-bank deposit taking institutions, their participation rates in the remaining sectors is relatively small when compared to their UK and US counterparts.

17 Residents of APEC economies accounted for \$97.3 billion, or 45%, of foreign-owned equity in Australian enterprise groups at 30 June 1997, while residents of EU countries accounted for \$94.1 billion (44%). The holdings of residents in APEC economies and EU countries each accounted for 13% of the total equity on issue. The holdings of residents of OECD member countries amounted to \$188.8 billion, which accounted for 88% of total foreign-owned equity and 25% of total equity on issue.

SIGNIFICANT FOREIGN INFLUENCE

18 The concept of direct investment is broadly one of capital invested in an enterprise by an investor having a significant influence, either actually or potentially exercised, over the key policies of the enterprise (called a direct investment enterprise). Ownership of 10% or more of the voting shares (or an equivalent equity interest) is regarded as indicative of significant influence by an investor.

19 Three enterprise group dissections are shown in Table F2.3 and these can be associated with three different levels of foreign influence: foreign control; significant foreign influence but not necessarily foreign control; and other foreign influence. First, direct investment enterprise groups over 50% owned by their direct foreign investors are groups in which there is significant foreign influence that is clearly sufficient to allow foreign control. Second, direct investment enterprise groups 10–50% owned by their direct foreign investors are groups in which there is significant foreign influence but not necessarily sufficient to allow foreign control (though it may be sufficient to exercise control). Third, other enterprise groups are groups in which there are foreign equity interests that are below the threshold used in defining significant foreign influence, as no foreign investor holds 10% or more of the equity. Analysis of data on equity issued to non-residents by direct investment enterprise groups in Australia as a proportion of total equity on issue provides an indication of the amount of influence non-residents have as a result of their equity holdings.

SIGNIFICANT FOREIGN INFLUENCE
continued

20 As shown in Table F2.3, at 30 June 1997, \$128.0 billion (or 60%) of the total foreign equity holdings of \$214.3 billion, was in the form of direct investment, with the remaining \$86.3 billion (or 40%) being in the form of portfolio investment. These amounts represented 17% and 12% respectively, of the total equity on issue. These proportions vary significantly across sectors.

21 In other words, 17% of the total equity on issue at 30 June 1997 was held by non-residents who had significant influence in the issuing Australian enterprises. This influence in most cases was sufficient to provide control, as most of the equity held by those non-residents was in enterprises where they had a majority interest.

22 As can be seen from Table F2.3, at 30 June 1997, enterprises with majority direct ownership accounted for \$103.1 billion (or 81%) of all direct investment equity. The direct investment equity associated with majority direct foreign ownership also accounted for 48% of all foreign-owned equity and 14% per cent of all equity issued in Australia.

FOR MORE INFORMATION

23 The data used in this analysis is available from the International Investment Section of the Australian Bureau of Statistics. For more information about the types of foreign participation analysis that can be undertaken or the availability of related unpublished statistics, contact Betty Gruber on Canberra (02) 6252 5601.

(a) Derived from current price original data. The net international investment position ratios are derived from the net foreign liabilities at the end of the period and GDP(I) for the year ended with that period. Other ratios use only data for the year ended with the period shown.

(b) For the latest reference period, GDP(I) for the year ended with the previous quarter is used.

EXPLANATORY NOTES

.....

INTRODUCTION

1 This publication presents comprehensive details of Australia's international accounts: its balance of payments and international investment position statistics.

2 The conceptual framework used in Australia's balance of payments and international investment position statistics is based on the Fifth Edition of the International Monetary Fund's *Balance of Payments Manual* (BPM5, 1993). This framework is summarised in the ABS publication *Information Paper: Implementing New International Statistical Standards in ABS International Accounts Statistics*, 1997 (5364.0) released on 29 September 1997. Descriptions of the underlying concepts and structure of the balance of payments and international investment position, and the sources, methods and terms used in compiling the estimates will be presented in *Balance of Payments and International Investment Position, Australia: Concepts, Sources and Methods* (5331.0) scheduled for release in September 1998.

SIGN CONVENTION

3 In keeping with balance of payments conventions, credit entries are shown without sign and debit items are shown as negative entries. However, references to debit items in Key points and analysis and comments are made without regard to sign.

4 International investment position statistics follow the balance of payments sign convention. For foreign liabilities, position data and any transaction increase or other flow increase in liabilities is shown without sign. A negative sign for transactions and other flows in liabilities denotes a fall in liabilities. For foreign assets, position data and any transaction increase or other flow increase in assets is shown with a negative sign. Transactions and other flows in assets shown without sign denote a decrease in assets.

5 Movements over time are expressed as percentage changes. A minus sign means a decrease in credit entries, a decrease in debit entries, a decrease in a surplus or an increase in a deficit. The absence of a sign means an increase in credit entries, an increase in debit entries, an increase in a surplus or a decrease in a deficit.

ACCURACY AND RELIABILITY

6 The transactions recorded in the balance of payments are of many different kinds, and therefore the compilation of balance of payments and international investment position estimates entails the use of a very wide range of statistical data of varying degrees of accuracy and timeliness.

7 Care should be exercised in the use and interpretation of estimates in this publication. The latest estimates are *preliminary and subject to revision* as more accurate data come to hand. Also, the more detailed estimates may be less accurate in relative terms than broader items and aggregates of which they form components.

SEASONAL ADJUSTMENT

8 The quarterly current account series in this publication are affected to some extent by seasonal influences and it is useful to recognise and take account of this element of variation.

9 The seasonally adjusted statistics in this publication should not be regarded as in any way definitive as recent estimates are subject to revision for several years, and results from seasonal adjustment vary according to the method used.

10 The factors used in seasonally adjusting the current account series can be obtained from Balance of Payments Section on Canberra (02) 6252 6224 at a cost of \$100.00.

EXPLANATORY NOTES

TREND ESTIMATES

11 The trend estimates are derived by applying a 7-term Henderson moving average to the seasonally adjusted series. The 7-term Henderson average (like all Henderson averages) is symmetric, but as the end of a time series is approached, asymmetric forms of the average are applied. While the asymmetric weights enable trend estimates for recent quarters to be produced, it does result in revisions to the estimates for the most recent three quarters as additional observations become available. There may also be revisions because of changes in the original data and as a result of the re-estimation of the seasonal factors. For further information, see *A Guide to Interpreting Time Series—Monitoring Trend An Overview* (1348.0) or contact Time Series Analysis Section on Canberra (02) 6252 6103.

CONSTANT PRICES

12 To enable analysis of the movement of goods and services in 'real' terms, estimates of goods and services at constant (average 1989–90) prices are compiled and published each quarter. Constant price series are derived by deflating the original current price series by specially compiled measures of price change.

INDEXES

IMPLICIT PRICE DEFULATOR (IPD)

13 The quarterly implicit price deflators (IPDs) are derived by dividing seasonally adjusted current price estimates by the corresponding constant price estimates. Movements in IPDs can be greatly affected by changes in the physical composition of the aggregates and their components. For this reason, quarterly IPDs derived from seasonally adjusted data are preferred to those using original data. The seasonal adjustment process itself is also a possible source of distortion.

TERMS OF TRADE

14 There are several ways of measuring the terms of trade. In this publication, the following index is used:

$$\frac{\text{Implicit price deflator for the credit item}}{\text{Implicit price deflator for the debit item}} \times 100$$

Quarterly estimates of the terms of trade shown in Table 6 of this publication are derived from seasonally adjusted data.

FIXED-WEIGHT INDEX

15 The fixed-weighted indexes are derived by combining individual component prices (base year 1989–90) with weights which reflect the relative importance of the components in the base year.

DIRECT INVESTMENT ADJUSTMENT

16 Direct investment adjustments are required in Tables 28 and 29 to adjust total foreign assets and liabilities to the net basis for recording foreign investment in Australia (FIA) and Australian investment abroad (AIA). For both FIA and AIA, the adjustment is symmetrical and includes claims of Australian direct investment enterprises on direct investors abroad plus liabilities of Australian direct investors to direct investment enterprises abroad.

FOREIGN DEBT

17 Foreign debt transactions, levels and interest income (as recorded in Tables 34, 35 and 36) between direct investors and direct investment enterprises are recorded on a gross basis for assets and liabilities. The direct investment adjustment is not applied in these tables.

EXPLANATORY NOTES

INDUSTRY DATA

18 The industry categories shown are based on the *Australian and New Zealand Standard Industrial Classification (ANZSIC)*, 1993 (1292.0). Industry statistics should be treated with some caution as they do not necessarily reflect the industry of the end use of the funds. First, the statistical unit (that is, the unit of observation and classification) generally consists of all enterprises in an enterprise group within a single resident institutional sector. The industry of this statistical unit, which may cover a broad range of activities, is determined on the basis of the predominant activity of the unit as a whole which may be quite different from the industry in which funds are used. Second, financial enterprises such as trading and merchant banks, may borrow funds as principals and then on-lend to clients in other industries.

COMMODITY BREAKDOWNS OF GENERAL MERCHANDISE

19 Commodity breakdowns of general merchandise credits are provided in Table 8 (at current prices), 10 (at constant prices), 12 (at current prices, seasonally adjusted) and 14 (at constant prices, seasonally adjusted). The groupings shown are based on the third revision of the United Nations Standard International Trade Classification (SITC Rev 3). For further details see Table 3 in the 1996 edition of *Balance of Payments Australia: Summary of Concepts, Sources and Methods* (5351.0).

20 Commodity breakdowns of general merchandise debits are provided in Table 9 (at current prices), 11 (at constant prices), 13 (at current prices, seasonally adjusted), and 15 (at constant prices, seasonally adjusted). The three broad end-use categories—*Consumption goods, Capital goods and Intermediate and other merchandise goods*—are based on United Nations' Classification of Broad Economic Categories (BEC), but differ from the BEC to the extent that intermediate goods are combined with other merchandise goods. These broad end-use categories are further divided into a total of 25 SITC Rev 3-based commodity groupings, which have also been aligned to the BEC.

21 Most of the 25 SITC Rev 3-based commodity groups are further sub-divided into a total of 106 commodity sub-groups. Although the information at this level is not published, it is available as a special data service, see paragraph 24.

22 For more information on the commodity classification of general merchandise debits and a detailed concordance between balance of payments general merchandise debits end-use categories, commodity groups, BEC and SITC Rev 3, refer to the ABS *Information Paper: Change to Commodity Classification of Merchandise Imports in Balance of Payments Publications* (5344.0).

EXPLANATORY NOTES

RELATED PRODUCTS AND SERVICES
continued

24 Estimates for months prior to those shown in this publication and more detailed merchandise goods debits time series on a balance of payments basis are available. Detailed data of exports and imports of goods, including dissections by commodity and country of origin, are also available on an international trade basis. These data can be obtained by contacting the General Sales and Inquiries telephone numbers shown on the back of this publication. There may be a charge for this information, depending on the volume of data requested.

25 Detailed quarterly general merchandise series at constant prices can be obtained from the Constant Price Estimates Section on Canberra (02) 6252 6716. These series are based on international trade statistics (i.e. they are not adjusted to a balance of payments basis) and relate to selected divisions and sections of the SITC Rev 3. Quarterly tables showing components of services can also be obtained from the Constant Price Estimates Section. These tables provide original and seasonally adjusted current and constant price estimates, corresponding to the series shown (in original current price terms) in Tables 20 and 21 of this publication. Both sets of estimates are working estimates only and may not always be completely consistent with published estimates.

GLOSSARY

26 A glossary of terms that are either new with the ABS implementation of BPM5 in the balance of payments and international investment position, or which represent a significantly different concept from an existing but similarly named concept, is provided on pages 88 and 89 of *Information Paper: Upgraded Balance of Payments and International Investment Position Statistics* (5365.0).

CHAIN VOLUME MEASURES

INTRODUCTION

1 The international standards for national accounting provide a framework for compiling an integrated set of price and volume measures which are conceptually consistent and analytically useful. The international standard *System of National Accounts 1993* (SNA93) recommends that annually-reweighted chain volume measures should be compiled where possible to aid the analysis of economic statistics. In reaching that recommendation, SNA93 argues that chain volume measures provide better indicators of volume growth than constant price estimates for most economic statistics relating to expenditure and production. The ABS will be introducing chain volume measures with the implementation of SNA93 standards for the September quarter 1998 national accounts.

2 Until now, constant price estimates have been derived using the base year unit prices as weights to combine the quantities of the different goods and services traded. However, the unit prices of different goods and services tend to grow at different rates—some at dramatically different rates. For example, the prices of computer equipment (adjusted for quality change) are estimated to have declined by about 75% between 1989–90 and June quarter 1998, while the prices of most other goods and services have increased. Changes in price relativities adversely affect the usefulness of constant price estimates, particularly for periods distant from the base year, and requires the base year used to derive constant price estimates be changed from time to time. Until now, it has been ABS practice to rebase every five years, but rebasing every five years is often insufficient. Because of this, SNA93 recommends rebasing every year and linking the resulting indexes to form annually-reweighted chain volume measures.

3 This appendix presents the latest experimental estimates of both the chain volume measures and the chain price indexes referenced to 1995–96, in the format that will be used in future issues of this publication for all of the components of goods and services.

WHAT IS BEING IMPLEMENTED?

4 Annually-reweighted, chain Laspeyres volume measures of exports and imports of goods and services will be published in dollar terms rather than as index numbers.

5 The fixed-weighted price indexes currently published in 5302.0 will be replaced by annually-reweighted, chain Laspeyres price indexes. Implicit price deflators will continue to be published, but will be derived from the current price data and the chain volume measures.

6 In late October 1998, the ABS will re-release the June quarter national accounts compiled on the new SNA93 basis and will include volume and price measures derived by the use of chaining. At that time, the balance of payments components shown in this appendix will be re-referenced to 1996–97. Re-referencing does not alter growth rates, but it does alter the level of a series. There will, however, be some minor revision to the growth rates for the new reference year and to estimates for the subsequent year as a result of the introduction of another base year in the compilation of the chain volume measures. There may also be further refinement to the level of detail at which the chain volume measures are benchmarked, or to other aspects of the methodology for volume and price estimation before the re-release of the June quarter accounts. For these reasons, the re-referenced and detailed balance of payments series for trade in goods and services will be re-released electronically at the same time as the re-released June quarter 1998 national accounts statistics.

A P P E N D I X 1

CHAIN VOLUME MEASURES *continued*

WHAT IS BEING IMPLEMENTED?
continued

7 For future statistical releases, the reference year used will be the year prior to the latest complete financial year. This will mean that the volume measures to be used in the re-released data in October 1998, and then adopted in the September quarter 1998 issue of 5302.0, will be expressed in terms of 1996–97 dollars. In the June quarter 1999 issue of 5302.0 the reference year will be changed to 1997–98, and every year thereafter the reference year will change with the release of the June quarter issue of 5302.0.

IMPACT OF CHAINING

8 In general, annually linked and reweighted chain volume measures provide better indicators of movement in real expenditures on goods and services in the balance of payments than constant price estimates, because, unlike constant price estimates, they take account of the changes to price relativities that occur from one year to the next.

9 In practice, the advantages of annual chain volume measures depend on the variability of the price and volume relativities among the component series. If there are significant changes in the relative prices of different goods and services, and there is a significant substitution effect in response to these changes, then the growth rates derived from constant price estimation with fixed base year weights applied over many years will have a downward bias for the years preceding the base year, and an upward bias in subsequent years.

10 In Australia's balance of payments, the most important changes in price relativities relate to the prices of computer equipment relative to the prices of other goods and services, and mainly affect imports of capital goods. For imports of goods and services in total, the constant price estimates (base year 1989–90) presently published understate annual average growth in import volumes for the five years to 1989–90 by 0.7% per annum. For the 7 years to 1996–97 the constant price estimates overstate growth by 1.8% per annum. In contrast, the chain Laspeyres volume measure provides a much better approximation to an ideal measure of growth, overstating growth by only 0.4% per annum in the earlier period, and by only 0.3% in the later period. In individual years, and particularly as the period moves further away from the base period, the constant price estimates can significantly overstate growth. Imports of goods and services, in constant price terms, rose in 1995–96 and 1996–97 at a rate about 35% faster than the chain Laspeyres volume measure. While not perfect, the chain Laspeyres volume measures represent a significant improvement over infrequently rebased constant price measures in terms of growth measurement, and an improvement that can be achieved within the data availability, cost and timeliness constraints of compiling the national accounts.

11 For exports of goods and services there is little difference between the average annual growth rates achieved with either constant price estimates or chain volume measures, although there are some significant differences between the yearly growth rates.

NON-ADDITIONITY

12 Chain volume measures are not generally additive. When the current price values in the reference year are extrapolated backwards or forwards using a chain index the extrapolated values of the components of an aggregate may not, in general, sum exactly to the extrapolated value of the aggregate. However, in implementing chain volume measures the ABS is using as the reference year the year of the latest price weights. By adopting this approach the problem of non-additivity does not exist for the one or two years immediately following the reference year, and is relatively small for the reference year and the immediately preceding years.

A P P E N D I X 1

CHAIN VOLUME MEASURES *continued*

TERMS OF TRADE

13 The terms of trade (TOT) measure is derived as a ratio of the implicit price deflators (IPDs) for exports over imports (multiplied by 100 to render the TOT into index form)).

14 However, the TOT now derived from the chain volume measures show different results from that derived from the 1989-90 based constant price estimates. For example, over the 12 years to June 1998, the TOT derived from 1989-90 base year IPDs for goods and services rose by 19%. The TOT generated from IPDs derived using chain volume measures rose by 10%.

FURTHER INFORMATION

15 For further information see the ABS publication *Information Paper: Introduction of Chain Volume Measures in the Australian National Accounts* (5248.0), which was released on 19 March 1998.

16 For information about the implementation of chain volume measures in the balance of payments, for time series of the chained measures in spreadsheet format, or for any other details about data availability please contact Peter Bradbury on 02 6252 6689 (phone), 02 6252 7219 (fax) or peter.bradbury@abs.gov.au.

17 Longer time series of the chained measures are also available in PC-Ausstats, the ABS on-line database.

CURRENCY AND MATURITY OF FOREIGN DEBT

INTRODUCTION

1 Table A2.1 contains information on the currency of both foreign debt assets and foreign debt liabilities (as shown in Tables 32, 33 and 35) cross classified by residual maturity. This is the first time that estimates of the currency and residual maturity of all foreign debt assets and liabilities have been published. The data are presented on a gross basis, without the netting of investment positions between direct investors/direct investment enterprises.

2 Information had previously been included, in the now discontinued *International Investment Position, Australia* publication (Cat. 5306.0), for both the currency and residual maturity (but not cross classified) of certain liabilities then designated as 'foreign borrowing'. These amounts excluded trade credits and other account liabilities, and the borrowing and other debt liabilities of Australian direct investors to their direct investment enterprises abroad. As well, substantial direct investment claims on foreign direct investors were netted out.

DESCRIPTION

3 'Currency' refers to the currency in which assets or liabilities are likely to be repaid, while 'residual maturity' refers to the time remaining until an asset or liability is due to be fully repaid.

4 Data for an instrument where currency allocation is not relevant, such as for monetary gold, or which are not able to be classified to a particular currency, including data on certain official reserve assets and foreign financial derivative assets and liabilities, are allocated to the 'Reserve Assets and Derivatives' category. Data which are not relevant to, or are not able to be classified to a residual maturity grouping are recorded as 'unallocated', including liabilities in the form of debt securities domiciled in Australia and financial derivatives. Reserve assets are allocated to the repayment category 'less than or equal to 90 days' though there may be a range of maturities.

5 International investment position statistics follow the balance of payments sign convention. For foreign liabilities, position data are shown without sign. For foreign assets, position data are shown with a negative sign.

FUTURE ISSUES

6 Data on the currency and residual maturity of foreign debt assets and liabilities will be published as Table 37 in future issues of this publication. However, the detail required to support the currency and maturity classifications for the current quarter cannot be collected and compiled in time for inclusion in the reference quarter's publication. Therefore currency and maturity data will be provided for the quarter preceding the reference quarter of the publication.

FURTHER INFORMATION

7 Further unpublished information, including historical estimates, can be obtained by contacting Peter Morrow on (02) 6252 5386.
