KEY POINTS

THE ALL GROUPS CPI

- rose 0.4% in the March quarter 2013, compared with a rise of 0.2% in the December quarter 2012.
- rose 2.5% through the year to the March quarter 2013, compared with a rise of 2.2% through the year to the December quarter 2012.

OVERVIEW OF CPI MOVEMENTS

- The most significant price rises this quarter were for new dwelling purchase by owner–occupiers (+1.7%), pharmaceutical products (+7.6%), tertiary education (+6.5%) and tobacco (+3.7%).
- The most significant offsetting price falls this quarter were for international holiday travel and accommodation (-5.2%), furniture (-6.8%) and fruit (-7.0%).

CHANGES IN THIS ISSUE

As outlined in the December quarter 2012 issue, the following time series spreadsheets now incorporate time series for all CPI expenditure classes for the weighted average of eight capital cities, including those that are not seasonally adjusted:

- Table 15. CPI: Expenditure Class Index Numbers, Seasonally adjusted, Weighted Average of Eight Capital Cities, and
- Table 16. CPI: Expenditure Class, Combined seasonal adjustment factors, Weighted Average of Eight Capital Cities.

ROUNDING Any discrepancies between totals and sums of components in this publication are due to

MAIN CONTRIBUTORS TO CHANGE

MAIN CONTRIBUTORS TO CHANGE

CPI GROUPS

The discussion of the CPI groups below is ordered in terms of their absolute significance to the change in All groups index points for the quarter (see Tables 6 and 7).

WEIGHTED AVERAGE OF EIGHT CAPITAL CITIES, Percentage change from previous quarter

HOUSING GROUP (+1.2%)

The housing group rose in the March quarter 2013. The main contributors to the rise were new dwelling purchase by owner–occupiers (+1.7%), electricity (+2.4%) and rents (+0.8%).

Over the twelve months to the March quarter 2013, the housing group rose 5.1% with rises in all categories. The main contributors to the rise were electricity (+17.1%), rents (+3.5%) and new dwelling purchase by owner–occupiers (+2.8%).

EDUCATION GROUP (+5.7%)

The education group rose in the March quarter 2013, with the commencement of the new school year. Rises in tertiary education (+6.5%), secondary education (+5.4%) and preschool and primary education (+4.6%) drove this movement.

Over the twelve months to the March quarter 2013, the education group rose 5.8%.

HEALTH GROUP (+3.0%)

The health group rose in the March quarter 2013. The main contributors to the rise were pharmaceutical products (+7.6%) and medical and hospital services (+2.0%). The rises were mainly due to the cyclical reduction in the proportion of patients who qualify for subsidies under the Pharmaceuticals Benefit Scheme (PBS) and Medicare Benefit Scheme (MBS) at the start of each calendar year.

Over the twelve months to the March quarter 2013, the health group rose 6.1%, mainly due to rises in medical and hospital services (+9.3%).

CLOTHING AND FOOTWEAR GROUP (-3.9%) The clothing and footwear group fell in the March quarter 2013. The main contributors to the fall were garments for men (-5.4%), footwear for women (-6.7%) and accessories (-4.5%).

Over the twelve months to the March quarter 2013, the clothing and footwear group fell 1.5%. The main contributors to the fall were footwear for women (-5.7%) and garments for women (-1.5%).

MAIN CONTRIBUTORS TO CHANGE continued

FOOD AND
NON-ALCOHOLIC
BEVERAGES GROUP
(-0.8%)

The food and non–alcoholic beverages group fell in the March quarter 2013. The main contributors to the fall were fruit (-7.0%) and vegetables (-4.0%). This fall was partially offset by a rise in take away and fast foods (+0.7%).

Over the twelve months to the March quarter 2013, the food and non-alcoholic beverages group rose 1.6%. The main contributors to the rise were fruit (+7.7%) and take away and fast foods (+3.2%). The rise was partially offset by a fall in lamb and goat (-12.1%).

ALCOHOL AND TOBACCO GROUP (+1.6%)

The alcohol and tobacco group rose in the March quarter 2013. The main contributor to the rise was tobacco (+3.7%) partially due to the effects of the federal excise tax increase. Federal excise tax is increased on 1 February and 1 August each year.

Over the twelve months to the March quarter 2013, the alcohol and tobacco group rose 3.7%. The main contributor to the rise was tobacco (+7.5%).

FURNISHINGS,
HOUSEHOLD EQUIPMENT
AND SERVICES GROUP
(-1.3%)

The furnishings, household equipment and services group fell in the March quarter 2013. The main contributors to the fall were furniture (-6.8%), household textiles (-6.7%) and glassware, tableware and household utensils (-4.7%). The fall was partially offset by a rise in childcare (+3.3%).

Over the twelve months to the March quarter 2013, the furnishings, household equipment and services group rose 0.6%. The main contributors to the rise were child care (+7.9%) and other household services (+6.4%). The rise was partially offset by a fall in furniture (-2.3%).

RECREATION AND CULTURE GROUP (-0.8%)

The recreation and culture group fell in the March quarter 2013. The main contributors to the fall were international holiday travel and accommodation (-5.2%) and audio, visual and computing equipment (-4.7%). The fall was partially offset by a rise in domestic holiday travel and accommodation (+1.2%).

In the CPI, airfares are collected in advance (at the time of payment), but are only used in the CPI in the quarter in which the trip is undertaken. International airfares are collected two months in advance (January for travel in March) and domestic airfares are collected one month in advance (January for travel in February).

Over the twelve months to the March quarter 2013, the recreation and culture group fell 0.5%. The main contributor to the fall was audio, visual and computing equipment (-13.5%).

TRANSPORT GROUP (+0.5%)

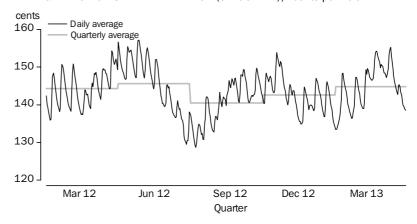

The transport group rose in the March quarter 2013. The main contributor to the rise was automotive fuel (+1.2%).

Automotive fuel fell in November (-3.5%), rose in December (+0.4%), fell in January (-0.4%), rose in February (+4.2%) and fell in March (-0.9%).

The following graph illustrates the movement of the average daily prices for unleaded petrol for the weighted average of eight capital cities over the last fifteen months.

TRANSPORT GROUP (+0.5%) continued

AVERAGE PRICE OF UNLEADED PETROL (91 OCTANE), cents per litre

Over the twelve months to the March quarter 2013, the transport group rose 1.4%. The main contributors to the rise were other services in respect of motor vehicles (+7.3%), maintenance and repair of motor vehicles (+4.2%) and urban transport fares (+4.5%). The rise was partially offset by a fall in motor vehicles (-2.1%).

INSURANCE AND
FINANCIAL SERVICES
GROUP (+0.7%)

The insurance and financial services group rose in the March quarter 2013. The main contributor to the rise was insurance (+1.9%).

Over the twelve months to the March quarter 2013, the insurance and financial services group rose 2.9%. The main contributor to the rise was insurance (+9.0%).

COMMUNICATION GROUP (+0.0%)

The communication group recorded no change in the March quarter 2013.

Over the twelve months to the March quarter 2013, the communication group rose 1.5%. The main contributors to the rise were telecommunication equipment and services (+1.4%) and postal services (+2.8%).

INTERNATIONAL TRADE EXPOSURE - TRADABLES AND NON-TRADABLES The tradables component (see Table 8) of the All Groups CPI fell 1.2% in the March quarter 2013. Prices for the goods and services in this component are largely determined on the world market. The tradables component represents approximately 40% of the weight of the CPI. The most significant contributors to the 0.9% fall in the tradable goods component were furniture, fruit, audio, visual and computing equipment, garments for men and vegetables. The most significant offsetting rises in the tradable goods component were for pharmaceutical products, tobacco, automotive fuel, other non–durable household products and wine. The fall in the tradable services component of 5.2% was driven by international holiday travel and accommodation.

The non-tradables component of the All Groups CPI rose 1.3% in the March quarter 2013. Prices for the goods and services in this component are largely determined by domestic price pressures. The non-tradables component represents approximately 60% of the weight of the CPI. The non-tradable goods component rose 1.0% mainly due to new dwelling purchase by owner-occupiers, electricity and take away and fast foods. The most significant offsetting falls were for milk, water and sewerage, bread and beer. The non-tradable services component rose 1.4% mainly due to increases in tertiary

MAIN CONTRIBUTORS TO CHANGE continued

INTERNATIONAL TRADE EXPOSURE - TRADABLES AND NON-TRADABLES continued

education, secondary education, medical and hospital services and rents. There were no offsetting falls.

Over the twelve months to the March quarter 2013, the tradables component fell 0.2% while the non-tradables component rose 4.2%. This compares to a fall of 0.4% and a rise of 3.9% respectively through the year to the December quarter 2012.

A detailed description of which expenditure classes are classified as tradable and non-tradable in the 16th series is shown in Appendix 1 of the September quarter 2011 issue of *Consumer Price Index, Australia* (cat. no 6401.0).

SEASONALLY ADJUSTED ANALYTICAL SERIES

In the March quarter 2013, the All groups CPI, seasonally adjusted rose 0.1%, compared to the unadjusted All groups CPI which recorded a rise of 0.4%.

The trimmed mean rose 0.3% in the March quarter 2013, compared to a rise of 0.6% in the December quarter 2012. Over the twelve months to the March quarter 2013, the trimmed mean rose 2.2% compared to a rise of 2.3% over the twelve months to the December quarter 2012.

The weighted median rose 0.5% in the March quarter 2013, compared to a revised rise of 0.6% in the December quarter 2012. Over the twelve months to the March quarter 2013, the weighted median rose 2.6% compared to a revised rise of 2.5% over the twelve months to the December quarter 2012.

A detailed explanation of the seasonal adjustment of the All Groups CPI is available in Information Paper: *Seasonal Adjustment of Consumer Price Indexes, 2011* (cat. no. 6401.0.55.003) available on the ABS website. This paper includes a description of the seasonal adjustment method applied, the trimmed mean and weighted median.

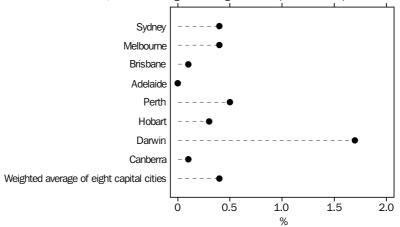

Revisions to the seasonally adjusted estimates can be the result of the application of concurrent seasonal adjustment, described in paragraph 15 of the Explanatory Notes.

CAPITAL CITIES COMPARISON

CAPITAL CITIES COMPARISON

ALL GROUPS CPI

ALL GROUPS CPI, Percentage change from previous quarter

At the All groups level, the CPI rose in seven capital cities during the March quarter 2013. Rises were recorded in Darwin (+1.7%), Perth (+0.5%), Sydney (+0.4%), Melbourne (+0.4%), Hobart (+0.3%), Brisbane (+0.1%), and Canberra (+0.1%). Adelaide recorded no change.

The housing group was the most significant positive contributor to the All groups quarterly movement, recording rises in six capital cities. The largest movement was recorded in Darwin (+4.0%) driven by increases in electricity, rents and water and sewerage. Melbourne (+2.7%) and Perth (+1.2%) also rose largely due to increases in new dwelling purchase by owner–occupiers.

The education group was the second most significant positive contributor to the All groups quarterly movement, recording rises in all capital cities. The largest movements were recorded in Hobart (+6.8%), Adelaide (+6.6%) and Sydney (+6.2%) driven by increases in tertiary education.

The clothing and footwear group was the most significant negative contributor to the All groups quarterly movement, recording falls in all capital cities. Sydney (–5.6%) and Brisbane (–5.1%) recorded the largest movements with falls in seven of the eight expenditure classes.

The second most significant negative contributor to the All groups quarterly movement was the food and non–alcoholic beverages group, recording falls in six capital cities. Hobart (-1.5%) and Melbourne (-1.4%) recorded the largest falls, mainly due to decreases in vegetables and fruit.

Over the twelve months to the March quarter 2013, the All groups CPI rose in all capital cities ranging from 1.0% in Hobart to 3.8% in Darwin. The positive annual movement for Darwin was driven by price rises for housing and transport.

EXPLANATORY NOTES

BRIEF DESCRIPTION OF THE

- **1** The Consumer Price Index (CPI) measures quarterly changes in the price of a 'basket' of goods and services which account for a high proportion of expenditure by the CPI population group (i.e. metropolitan households). This 'basket' covers a wide range of goods and services, arranged in the following eleven groups:
 - Food and non-alcoholic beverages
 - Alcohol and tobacco
 - Clothing and footwear
 - Housing
 - Furnishings, household equipment and services
 - Health
 - Transport
 - Communication
 - Recreation and culture
 - Education
 - Insurance and financial services.
- **2** Capital city indexes used by the CPI are based on the 2006 Australian Standard Geographical Classification (ASGC) statistical divisions. The capital city indexes measure price movements over time in each city individually. They do not measure differences in retail price levels between cities.
- **3** Further information about the CPI is contained in *Consumer Price Index: Concepts, Sources and Methods, 2011* (cat. no. 6461.0). An updated version reflecting the changes made during the 16th series review was released on 19 December 2011.
- **4** The frequency of price collection by item varies as necessary to obtain reliable price measures. Prices of some items are volatile (i.e. their prices may vary many times each quarter) and for these items frequent price observations are necessary to obtain a reliable measure of the average price for the quarter. Each month prices are collected at regular intervals for goods such as milk, bread, fresh meat and seafood, fresh fruit and vegetables, alcohol, tobacco, women's outerwear, project homes, motor vehicles, petrol and holiday travel and accommodation. For most other items, price volatility is not a problem and prices are collected once a quarter. There are a few items where prices are changed at infrequent intervals, for example education fees where prices are set once a year. In these cases, the frequency of price collection is modified accordingly.
- **5** In order to facilitate a more even spread of field collection workload, the number of items for which prices are collected quarterly is distributed roughly equally across each month of each quarter. In all cases, however, individual items are priced in the same month of each quarter. For example, items for which prices are collected in the first month of the September quarter, July, are also priced in the first month of subsequent quarters, namely October, January and April.
- **6** There are 87 expenditure classes (that is, groupings of like items) in the 16th series CPI and each expenditure class has its own weight, or measure of relative importance. In calculating the index, price changes for the various expenditure classes are combined using these weights.
- **7** Changes in the weighting pattern have been made at approximately six yearly intervals to take account of changes in household spending patterns. The CPI now comprises sixteen series of price indexes which have been linked to form a continuous series. The current and historical weighting patterns for the CPI for the weighted average of the eight capital cities are published in *Consumer Price Index: Historical Weighting Patterns (1948 to 2011)* (cat. no. 6431.0). The 16th series weighting pattern for the weighted average of eight capital cities and for each of the eight capital cities, as well as each city's percentage contribution to the weighted average, are also published in the

PRICES

WEIGHTING PATTERN

WEIGHTING PATTERN continued

Consumer Price Index: 16th Series Weighting Pattern (cat. no. 6471.0). Both publications are available on the ABS website http://www.abs.gov.au.

ANALYSIS OF CPI CHANGES

8 Movements in indexes from one period to another can be expressed either as changes in index points or as percentage changes. The following example illustrates the method of calculating changes in index points and percentage changes between any two periods:

All groups CPI: Weighted average of eight capital cities. Index numbers:

June Quarter 2012 100.4 (see Table 1) less June Quarter 2011 99.2 (see Table 1)

Change in index points 1.2

Percentage change $1.2/99.2 \times 100 = 1.2\%$ (see Table 2)

- **9** Percentage changes are calculated to illustrate three different kinds of movements in index numbers:
 - movements between consecutive financial years (where the index numbers for financial years are simple averages of the quarterly index numbers)
 - movements between corresponding quarters of consecutive years
 - movements between consecutive quarters.
- 10 Table 7 provides a detailed analysis, for the weighted average of eight capital cities, of movements in the CPI since the previous quarter, including information on movements for groups, sub–groups and expenditure classes. It also shows the contribution which each makes to the total CPI. For instance, the dairy and related products sub–group contributed 1.13 index points to the total All groups index number of 100.4 for the June Quarter 2012. The final column shows contributions to the change in All Groups index points by each group, sub–group and expenditure class.

ANALYTICAL SERIES

- **11** Various series are presented in Table 8 in this publication to assist users analyse the CPI. Some of the analytical series are compiled by taking subsets of the CPI basket, and most are self explanatory, such as 'All groups CPI excluding Food and non–alcoholic beverages'. (A complete list of CPI groups, sub–groups and expenditure classes is contained in Tables 6 and 7). Other series and their composition are described below:
 - All groups CPI, seasonally adjusted: Comprises all components included in the All groups CPI, seasonally adjusted where seasonality has been identified at the weighted average of eight capital cities level. Seasonal adjustment factors are calculated using the history of price changes up to the current quarter CPI and are revised each quarter.
 - Underlying trend series, 'Trimmed mean' and 'Weighted median': These are two analytical measures of trend inflation calculated from the June quarter 2002 using standard ABS seasonal adjustment techniques. For more information see the Information Paper: Seasonal Adjustment of Consumer Price Indexes, 2011 (cat. no. 6401.0.55.003). The Trimmed mean and Weighted median are calculated using the distribution of expenditure classes each quarter derived as follows:
 - Where CPI expenditure classes are identified as having a seasonal pattern, quarterly price changes are estimated on a seasonally adjusted basis. In the 16th series, 62 out of the 87 expenditure classes are classified as seasonal. A description of which series are seasonal is published in Appendix 1 of the September quarter 2011 issue of *Consumer Price Index*, *Australia* (cat. no 6401.0).
 - The CPI expenditure classes are ranked from lowest to highest according to the seasonally adjusted percentage change from the previous quarter.
 - The seasonally adjusted relative weight of each expenditure class is calculated based on its previous quarter contribution to the All groups CPI.

ANALYTICAL SERIES continued

- The 'Trimmed mean' is calculated by using a weighted average of percentage change from the previous quarter (seasonally adjusted) from the middle 70 per cent of the distribution.
- The 'Weighted median' is calculated using the percentage change from the previous quarter (seasonally adjusted) expenditure class at the 50th percentile of the distribution.
- International trade exposure series, Tradables component: Comprises all items whose prices are largely determined on the world market. For more information, see paragraph 12 below.
- International trade exposure series, Non-tradables component: Comprises all items not included in the Tradables component.
- All groups CPI, goods component: Comprises the Food and non-alcoholic beverages group (except Restaurant meals); Alcohol and tobacco group; Clothing and footwear group (except Cleaning, repair and hire of clothing and footwear); Furnishings, household equipment and services group (except Domestic and household services sub-group); Utilities, Audio, visual and computing equipment and services, and Newspapers, books and stationery sub-groups; and New dwelling purchase by owner-occupiers, Pharmaceutical products, Motor vehicles, Automotive fuel, Spare parts and accessories for motor vehicles, Equipment for sports, camping and open-air recreation, Games, toys and hobbies and Pets and related products expenditure classes.
- All groups CPI, services component: Comprises all items not included in the 'All groups CPI, goods component'. A description of which series are goods or services is published in Appendix 1 of the September quarter 2011 issue of Consumer Price Index, Australia (cat. no 6401.0).
- All groups CPI including Deposit and loan facilities (indirect charges): One of the outcomes of the 16th series CPI Review was to remove the indirectly measured component of the Deposit and loan facilities index from the headline CPI but to include it in a new analytical series. This index includes the 16th series All groups CPI plus the indirectly measured component of the Deposit and loan facilities index.
- Market goods and services excluding 'volatile items': in addition to the items excluded from the series 'All groups CPI excluding 'volatile items", also excludes: Utilities, Property rates and charges, Child care, Health, Other services in respect of motor vehicles, Urban transport fares, Postal services, and Education.
- All groups CPI excluding Insurance and financial services: Reflecting the changing composition of the CPI, from the September quarter 1989 to the June quarter 1998, comprises the All groups CPI excluding house insurance, house contents insurance, vehicle insurance and mortgage interest charges and consumer credit charges; from the September quarter 1998 to the June quarter 2000 comprises the All groups CPI excluding house insurance, house contents insurance and vehicle insurance; from the September quarter 2000 to the June quarter 2005 comprises the All groups CPI excluding insurance services; from the September quarter 2005 to the June quarter 2011 comprises the All groups CPI excluding Financial and insurance services; from the September quarter 2011 comprises the All groups CPI excluding Insurance and financial services.

ANALYTICAL SERIES continued

- All groups CPI excluding Housing and Insurance and financial services: Reflecting the changing composition of the CPI, from the September quarter 1989 to the June quarter 1998, comprises the All groups CPI excluding Housing, house contents insurance, vehicle insurance and consumer credit charges; from the September quarter 1998 to the June quarter 2000 comprises the All groups CPI excluding Housing, house insurance, house contents insurance and vehicle insurance; from the September quarter 2000 to the June quarter 2005 comprises the All groups CPI excluding Housing and insurance services; from the September quarter 2005 to the June quarter 2011 comprises the All groups CPI excluding Housing and Financial and insurance services; from the September quarter 2011 comprises the All groups CPI excluding Housing and Insurance and financial services.
- All groups CPI excluding food and energy: Comprises the All groups CPI excluding the Food and non-alcoholic beverages group (except Restaurant meals); Electricity, Gas and other household fuels; and Automotive fuel.
- All groups CPI excluding 'volatile items': Comprises the All groups CPI excluding Fruit and vegetables and Automotive fuel.
- **12** The International trade exposure series was reviewed and updated for the 16th series. There were five changes of classification. 'Cakes and biscuits' and 'Jams, honey and spreads' were reclassified from non-tradable to tradable. 'Waters, soft drinks and juices', 'Newspapers, magazines and stationery' and 'Pets and related products' were reclassified from tradable to non-tradable. A description of which series are tradable or non-tradable is published in Appendix 1 of the September quarter 2011 issue of Consumer Price *Index, Australia* (cat. no 6401.0). These changes are included from the September quarter 2011. The historical tradable and non-tradable series will not be revised.
- 13 The published index numbers have been rounded to one decimal place, and the percentage changes (also rounded to one decimal place) are calculated from the total level of a group of indexes being outside the range of the percentage changes for index numbers. The underlying trend estimates, Trimmed mean and Weighted median, are calculated from unrounded component series. The percentage changes for the seasonal and underlying series (rounded to one decimal place) are calculated from the
- rounded index numbers. In some cases, this can result in the percentage change for the the component level indexes. Seasonally adjusted estimates are calculated from rounded rounded index numbers.
- **14** Seasonally adjusted estimates are derived by estimating and removing systematic calendar related effects from the original series. In most economic data these calendar related effects are a combination of the classical seasonal influences (e.g. the effect of the weather, social traditions or administrative practices such as government charges increasing on 1 July each year) plus other kinds of calendar related variations, such as Easter or the proximity of significant days in the year (e.g. Christmas). In the seasonal adjustment process, both seasonal and other calendar related factors evolve over time to reflect changes in activity patterns. The seasonally adjusted estimates reflect the sampling and non-sampling errors to which the original estimates are subject.
- 15 The CPI uses a concurrent seasonal adjustment methodology to derive the adjustment factors. This method uses the original time series available at each reference period to estimate seasonal factors for the current and previous quarters. Concurrent seasonal adjustment is technically superior to the more traditional method of reanalysing seasonal patterns once each year because it uses all available data to fine tune the estimates of the seasonal component each quarter. With concurrent analysis, the seasonally adjusted series are subject to revision each quarter as the estimates of the seasonal factors are improved. In most instances, the only significant revisions will be to the combined adjustment factors for the previous quarter and for the same quarter in

ROUNDING

SEASONALLY ADJUSTED INDEXES

SEASONALLY ADJUSTED INDEXES continued

the preceding year as the reference quarter (i.e. if the latest quarter is September quarter 2011 then the most significant revisions will be to June quarter 2011 and September quarter 2010). The seasonal patterns are also reanalysed on an annual basis or when there are known changes to regular events. This can lead to additional revisions.

- **16** Autoregressive integrated moving average (ARIMA) modelling can improve the revision properties of the seasonally adjusted and trend estimates. ARIMA modelling relies on the characteristics of the series being analysed to project future period data. The projected values are temporary, intermediate values, that are only used internally to improve the estimation of the seasonal factors. The projected data do not affect the original estimates and are discarded at the end of the seasonal adjustment process. From the December quarter 2012, the Consumer Price Index uses ARIMA modelling where appropriate for individual time series. The ARIMA model is assessed as part of the annual reanalysis. For more information on ARIMA modelling see Feature article: Use of ARIMA modelling to reduce revisions in the October 2004 issue of *Australian Economic Indicators* (cat. no. 1350.0).
- **17** The ABS applies seasonal adjustment to the expenditure class components of the CPI which are found to be seasonal, and then aggregates the seasonally adjusted and non–seasonally adjusted components to calculate the All groups CPI, seasonally adjusted, Trimmed mean and Weighted median estimates. The seasonally adjusted expenditure class components are available in Table 15 CPI expenditure class, seasonally adjusted index numbers, weighted average of eight capital cities. The seasonal factors used to derive these seasonally adjusted indexes are available in Table 16 CPI expenditure class, combined seasonal adjustment factors, weighted average of eight capital cities. For more information about seasonal adjustment of the CPI please refer to *Information Paper: Seasonal Adjustment of Consumer Price Indexes, 2011* (cat. no. 6401.0.55.003).
- 18 In analysing price movements in Australia, an important consideration is Australia's performance relative to other countries. However, a simple comparison of All groups (or headline) CPIs is often inappropriate because of the different measurement approaches used by countries for certain products, particularly housing and financial and insurance services. To provide a better basis for international comparisons, the 17th International Conference of Labour Statisticians adopted a resolution which called for countries to 'if possible, compile and provide for dissemination to the international community an index that excludes housing and financial services' in addition to the all—items index.
- Table 9 presents indexes for selected countries on a basis consistent with the above resolution and comparable to the Australian series 'All groups excluding Housing and Insurance and financial services' (see paragraph 11). However, other than Australia and New Zealand, the countries represented in this table are yet to develop indexes on this basis, so the indexes presented here are consistent with the series previously published for All groups excluding Housing. To facilitate comparisons, all indexes in this table have been converted, where necessary, to a quarterly basis and re–referenced to an index reference period of 2011-12 = 100.0. Index numbers and percentage changes are always published to one decimal place, and the percentage changes are calculated from the rounded index numbers. Index numbers for periods longer than a single quarter (e.g. for financial years) are calculated as the simple arithmetic average of the rounded quarterly index numbers.
- **20** In producing Table 9, the ABS is grateful for the assistance of the relevant national statistical agencies which have either directly supplied indexes for all items excluding housing and insurance and financial services or data to enable their derivation.

INTERNATIONAL COMPARISONS

REVISIONS

21 CPI original indexes are revised only in exceptional circumstances, such as to correct a significant error. As is the case with all price indexes, the index reference period (i.e. the period in which the index is set equal to 100.0) will be changed periodically. The index number levels for all periods will be changed by this process and it may also result in differences, due to rounding, between the percentage changes published on the old base and those on the new base. Seasonally adjusted indexes (including the Trimmed mean and Weighted median) for some quarters will be revised as extra quarters are included in the series analysed for seasonal influences (see paragraphs 14 to 17).
