NOTES

ABOUT THIS PUBLICATION	This publication presents information about people aged 15 years and over who are not in the labour force: that is, neither employed nor unemployed. The data measure the potential supply of labour not reflected in employment and unemployment statistics, and measure the characteristics of that potential supply.
	Statistics in this publication were obtained from the Persons Not in the Labour Force Survey, conducted throughout Australia in September 2012 as a supplement to the Australian Bureau of Statistics (ABS) monthly Labour Force Survey (LFS).
	Information collected in the survey includes details about whether people not in the labour force wanted to work; reasons why they were not actively looking for work, or were not available for work; and their main activity while not in the labour force.
	Many people not in the labour force have some attachment to the labour force. For example, they may want a job, but for a variety of reasons are not actively looking for work even though they are available to start a job. There is an expectation that many of these people could move into the labour force in the short term, or could do so if labour market conditions changed.
ADDITIONAL DATACUBES	Datacubes presenting more detailed data including historical time series will be published on 19 March 2013 under this catalogue number. These will be available free of charge from the ABS website.

CONCEPTUAL FRAMEWORK

PERSONS NOT IN THE LABOUR FORCE (PNILF) AGED 15 YEARS AND OVER

Persons not in the labour force consists of those who are marginally attached to the labour force, and those who are not. Persons who are marginally attached to the labour force satisfy some, but not all, of the criteria used to classify a person as unemployed.

Persons not in the labour force are considered to be marginally attached to the labour force if they:

- wanted to work and were actively looking for work (but, unlike unemployed people, were not available to start work in the reference week); or
- wanted to work and were <u>not</u> actively looking for work but were available to start work within four weeks.

Persons not in the labour force are not marginally attached to the labour force if they: did not want to work; or

 wanted to work but were <u>not</u> actively looking for work and were <u>not</u> available to start work within four weeks.

The following diagram presents estimates from the September 2012 PNILF Survey.

SUMMARY OF FINDINGS

OVERVIEW

In September 2012, the Persons Not in the Labour Force survey found there were just over 6 million people aged 15 years and over who were not in the labour force. This represented 33% of the civilian population aged 15 years and over, and has remained stable over recent years (Table 1).

Of those people not in the labour force:

- 60% were women;
- 21% wanted to work (22% of women not in the labour force and 19% of men not in the labour force) (Table 1); and
- 16% were aged 15–24 years, 41% were aged 25–64 years and 43% were aged 65 years and over (Table 2).

PERSONS NOT IN THE LABOUR FORCE, Proportion of the civilian population-Age group (years)-By sex, 2012

The proportion of persons not in the labour force was highest in the age groups most likely to be retired (73% for those aged 65–69 years and 94% for those 70 years and over) and those in the age group coinciding with school study (45% for those aged 15–19 years) (Table 3).

Apart from the 15–19 year age group, there were a higher proportion of women who were not in the labour force than men (Table 3).

The main activity reported for those not in the labour force varied by age. The main activity for those aged 15–24 years was attending an educational institution (83%), while for those 65 years and over, it was retired or voluntarily inactive (53% for 65–69 years and 61% for those 70 years and over) (Table 2).

Across the other age groups (25 to 64 years), the most common main activity for males was own long term health condition or disability (35%). For women the most common main activity was home duties (39%) (Table 2).

SUMMARY OF FINDINGS continued

WITH MARGINAL In September 2012, there were 918,100 people with marginal attachment to the labour ATTACHMENT TO THE force, representing approximately 15% of people not in the labour force. LABOUR FORCE Persons not in the labour force are considered to be marginally attached to the labour force if they: wanted to work and were actively looking for work but were not available to start work in the reference week (84,300); or wanted to work and were not actively looking for work but were available to start work within four weeks (833,700). Of those with marginal attachment to the labour force: ■ 569,300 (62%) were women; ■ 833,700 (91%) were not actively looking for work, but were available to start work within four weeks (Table 1); ■ 268,400 (29%) were aged 15–24 years (Table 3); and ■ 196,100 (21%) had never held a job (Table 4). The largest group of men with marginal attachment to the labour force were aged 15-19 years (30%), followed by men aged 25-34 years (13%). By comparison, the two largest groups of women with marginal attachment to the labour force were aged 35-44 years (23%) and 25-34 years (23%) (Table 3). PERSONS WITH MARGINAL ATTACHMENT, Selected main activity when Main activity when not in not in the labour force-By sex, 2012 the labour force Retired or voluntarily inactive ------Home duties Caring for children •----0 Attending an educational institution _ _ _ _ _ _ _ _ _ _ _ _ -0-Own long-term health condition or disability - - - -Travel, holiday or leisure activity Males **O** Females 30 Ó 10 20 40% The most commonly reported main activity for men with marginal attachment to the labour force was 'Attending an educational institution' (38% of men compared to 22% of women), whereas for women it was 'Home duties' (31% of women compared to 9% of men) and 'Caring for children' (26% of women compared to 5% of men) (Table 4). Wanted to work but not There were 259,200 people not in the labour force because they were caring for children actively looking who wanted to work but were not actively looking for work. The majority (94%) were women (Table 9). Time since last job In September 2012, 79% (722,000) of people with marginal attachment to the labour force had worked before. Of these people about a third (32%) had worked less than 12 months ago, and a further 23% had worked one to three years ago (Table 4).

Not actively looking for work - Intention to enter the labour force in the next 12 months There were 833,700 people who were marginally attached to the labour force and not actively looking for work and available to start work within four weeks. Of these people 578,800 (69%) indicated that they intended to, or might enter the labour force in the next 12 months. Of whom:

- 358,200 (62%) were women;
- 54,300 (9%) were discouraged job seekers; and
- 385,000 (67%) reported that they would prefer to work part-time (Table 5).

Of women with marginal attachment to the labour force who were not actively looking for work, who intended to or might enter the workforce in the next 12 months, 263,700 (74%) preferred part-time work, while 72,400 (20%) preferred full-time work. For men, 121,300 (55%) preferred part-time work and 82,700 (37%) preferred full-time work. The remaining people did not know if they wanted to work full-time or part-time.

The most common reasons for those who might enter the labour force in the next 12 months for not actively looking for work was that they were currently attending an education institution (27%) or they were caring for children (18%)

Of those with marginal attachment who were not actively looking for work, 26% reported that they were not intending to work (Table 5).

Discouraged Job SeekersIn September 2012, there were 106,600 discouraged job seekers aged 15 years and over.This was a statistically significant increase from 90,700 in 2011, and is a return to a similarlevel in 2010 (102,100) and 2009 (111,800). The increase in 2012 was due to a rise inmale discouraged job seekers (from 38,300 in 2011 to 50,200 in 2012) (Table 1).

Discouraged job seekers are those people with marginal attachment to the labour force who wanted to work and were available to start work within the next four weeks but whose main reason for not actively looking for work was that they believed they would not find a job for any of the following reasons:

- considered to be too young or too old by employers;
- believes ill health or disability discourages employers;
- lacked necessary schooling, training, skills or experience;
- difficulties because of language or ethnic background;
- no jobs in their locality or line of work,
- no jobs with suitable hours; or
- no jobs at all.

Of the 106,600 discouraged job seekers:

- 64,300 (60%) were aged 55 years and over;
- 56,300 (53%) were women;
- 92,900 (87%) had worked before (Table 7);
- 54,300 (51%) intended to or might enter the labour force in the next 12 months (Table 7), of whom 63% preferred to work part-time (Table 5);
- 28,400 were not currently looking for work but had looked for work in the previous 12 months (Table 7).
- 48,000 (45%) did not intend to enter the labour force in the next 12 months, of whom 63% stated the main reason they were not actively looking for work was because they were 'Considered too old by employers' (Table 5).

Discouraged Job Seekers continued

Lacked the necessary schooling, training, skills or experience No jobs in locality or line of work Considered too old by employers No jobs at all No jobs with suitable hours Believes ill health or disability discourages employers

10

0

For all discouraged job seekers, the most commonly reported main reason for not actively looking for work was 'Considered too old by employers' (36%). This was followed by 'No jobs in locality or line of work' (20%) (Table 5).

20

30 %

Main reason for notThereactively looking for work -but wethose who were notweeksdiscouraged job seekerslabour

There were 727,200 people who were not discouraged job seekers, who wanted to work, but were not actively looking for work and were available to start work within four weeks. These people accounted for 79% of all people with marginal attachment to the labour force (Table 4).

O Females

50

PERSONS WHO WERE NOT DISCOURAGED JOB SEEKERS, MARGINALLY ATTACHED TO THE LABOUR FORCE, NOT ACTIVELY LOOKING FOR WORK AND AVAILABLE, Selected main reason for not actively looking for work-By sex, 2012

Of the 727,200 people who were not discouraged job seekers, the most commonly reported main reason for not actively looking for work, by men, was 'Attending an educational institution' (35%), followed by 'Own long-term health condition or disability' (15%). By comparison, the most commonly reported main reason for women was 'Caring for children' (31%), followed by 'Attending an educational institution' (19%) (Table 6).

DISCOURAGED JOB SEEKERS, Selected main reason for not actively looking for work-By sex, 2012

SUMMARY OF FINDINGS continued

WITHOUT MARGINAL ATTACHMENT TO THE LABOUR FORCE

Time since last job

In September 2012, there were 5.2 million people (2.1 million men and 3.1 million women) aged 15 years and over without marginal attachment to the labour force. Of those without marginal attachment:

- 83% reported that they did not want to work, or did not know if they wanted to work;
- 7% wanted to work but were not actively looking for work and were not available to start work within four weeks (Table 1);
- 10% were permanently unable to work;
- 49% were aged 65 years and over (53% of men and 46% of women);
- 16% were aged 55–64 years old; and
- 18% never had a job, of whom 60% were women (Table 8).

Main activity when not in
the labour forceFor those without marginal attachment to the labour force, the most commonly
reported main activity when not in the labour force was 'Retired or voluntarily inactive'
(34%) followed by 'Home duties' (20%) (Table 8).

In September 2012, there were 4.3 million people without marginal attachment to the labour force who had previously had a job. Of these:

- 55% last worked 10 or more years ago; and
- 20% last worked less than 3 years ago (Table 8).

EXPLANATORY NOTES

INTRODUCTION	1 The statistics in this publication were compiled from data collected in the Persons Not in the Labour Force Survey that was conducted throughout Australia in September 2012 as a supplement to the monthly Labour Force Survey (LFS). Respondents to the LFS who were in scope of the supplementary survey were asked further questions.
	2 The publication <i>Labour Force, Australia</i> (cat. no. 6202.0) contains information about survey design, sample design, scope, coverage and population benchmarks relevant to the monthly LFS, which also applies to supplementary surveys. It also contains definitions of demographic and labour force characteristics, and information about telephone interviewing relevant to both the monthly LFS and supplementary surveys.
CONCEPTS SOURCES AND METHODS	3 The conceptual framework used in Australia's LFS aligns closely with the standards and guidelines set out in Resolutions of the International Conference of Labour Statisticians. Descriptions of the underlying concepts and structure of Australia's labour force statistics, and the sources and methods used in compiling these estimates, are presented in <i>Labour Statistics: Concepts, Sources and Methods</i> (cat. no. 6102.0.55.001).
SCOPE	 4 The scope of the LFS is restricted to people aged 15 years and over and excludes the following people: members of the permanent defence forces; certain diplomatic personnel of overseas governments, customarily excluded from the Census and estimated populations; overseas residents in Australia; and members of non-Australian defence forces (and their dependants).
	5 Students at boarding schools, patients in hospitals, residents of homes (e.g. retirement homes, homes for people with disabilities), and inmates of prisons are excluded from all supplementary surveys.
	6 This supplementary survey was conducted in both urban and rural areas in all states and territories, but excluded people living in Indigenous communities in very remote parts of Australia.
COVERAGE	7 The estimates in this publication relate to people covered by the survey in September 2012. In the LFS, coverage rules are applied which aim to ensure that each person is associated with only one dwelling and hence has only one chance of selection in the survey. See <i>Labour Force, Australia</i> (cat. no. 6202.0) for more details.
SAMPLE SIZE	8 Supplementary surveys are not conducted on the full LFS sample. Since August 1994 the sample for supplementary surveys has been restricted to no more than seven-eighths of the LFS sample.
	9 The initial sample for the September 2012 LFS consisted of 36,897 private dwelling households and special dwelling units. Of the 29,735 private dwelling households and special dwelling units that remained in the survey after sample loss (e.g. households selected in the survey which had no residents in scope for the LFS, vacant or derelict dwellings and dwellings under construction), approximately 28,162 or 94.7% fully responded to the Persons Not in the Labour Force Survey. The number of completed interviews obtained from these private dwelling households and special dwelling units (after taking into account scope, coverage and subsampling exclusions) was 16,038.
RELIABILITY OF THE ESTIMATES	 Estimates in this publication are subject to sampling and non-sampling errors: Sampling error is the difference between the published estimate and the value that would have been produced if all dwellings had been included in the survey. For more information, see the Technical Note.

EXPLANATORY NOTES *continued*

RELIABILITY OF THE ESTIMATES continued	 Non-sampling errors are inaccuracies that occur because of imperfections in reporting by respondents and interviewers, and errors made in coding and processing data. These inaccuracies may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers, and efficient processing procedures.
SEASONAL FACTORS	11 The estimates are based on information collected in the survey month, and, due to seasonal factors, may not be representative of other months of the year.
CLASSIFICATIONS USED	12 Occupation data are classified according to the <i>ANZSCO – Australian and New Zealand Standard Classification of Occupations, First Edition, Revision 1,</i> (cat. no. 1220.0).
	13 Country of birth data are classified according to the <i>Standard Australian Classification of Countries (SACC), Second Edition</i> (cat. no. 1269.0).
COMPARABILITY OF TIME SERIES	14 The Labour Force Survey estimates, and estimates from the supplementary surveys, are calculated in such a way as to sum to independent estimates of the civilian population aged 15 years and over (population benchmarks). These population benchmarks are based on Estimated Resident Population (ERP) data. Generally, revisions are made to population benchmarks for the LFS following the final rebasing of population estimates to the latest five-yearly Census of Population and Housing, or when the need arises.
	15 From February 2009 Labour Force Estimates have been compiled using population benchmarks based on the 2006 Census of Population and Housing. Revisions were applied to the LFS population benchmarks in July 2010 and December 2012 to take into account the latest available population estimates. The latest revision undertaken in December 2012 is not reflected in the estimates presented in this issue.
	16 Changes to the LFS population benchmarks impact primarily on the magnitude of the Labour Force Survey estimates (i.e. employment and unemployment) that are directly related to the underlying size of the population. For more details on population benchmarks, see the Explanatory Notes in <i>Labour Force, Australia</i> (cat. no. 6202.0), and for details about the revisions made, see the article in the November 2012 issue of <i>Labour Force, Australia</i> (cat. no. 6202.0) and the article in the September 2010 issue of <i>Labour Force, Australia</i> (cat. no. 6202.0).
COMPARABILITY WITH PREVIOUS SURVEYS	17 Persons Not in the Labour Force Surveys conducted up to and including September 1987 included all people aged 15 years and over. From September 1988 to September 2004, the survey excluded all people aged 70 years and over.
	18 The scope of the Persons Not in the Labour Force Survey was expanded in September 2005 to include all people aged 15 years and over. This change resulted in about 1.6 million extra people coming within the scope of this survey. Users need to exercise caution when comparing the estimates prior to 2005 with subsequent years. Direct comparisons should only be made where the same age ranges are applied.
	19 From September 2006, estimates of the number of people not in the labour force because they were caring for children include people whose youngest child was aged 12 years and under. Previously questions relating to the care of children were only asked of people with children aged 11 years and under. This change was made to ensure consistency with other ABS surveys. Users need to exercise care when comparing the estimates in Table 9 of this publication with publications prior to September 2006.

COMPARABILITY WITH PREVIOUS SURVEYS continued

20 Following a review of the Persons Not in the Labour Force Survey, a number of changes were implemented in the 2007 cycle. Users need to exercise caution when comparing estimates from 2007 with previous years' data. The changes are documented in the following paragraphs 21 to 24.

21 Between September 2001 and September 2006, people who reported in the LFS that they were 'Permanently not intending to work' were not asked questions about wanting to work and looking for work in the Persons Not in the Labour Force Survey. As such, these people were classified as 'Did not want to work'. It is likely, however, that if they had been asked these questions, then some of these people may have been classified differently and may have been included in one of the 'Wanted to work' categories. From September 2007, people who specified that they were 'Permanently not intending to work' were asked questions about wanting to work and looking for work. As a result of this change, there has been a break in time series.

22 Prior to September 2007, the data items, 'All reasons for not actively looking for work', 'Main reason for not actively looking for work' and 'Main reason not available to start work within four weeks' included the category 'Own ill health, physical disability or pregnancy'. From September 2007, this category has been split into three separate categories: 'Own short-term illness or injury', 'Own long-term health condition or disability' and 'Pregnancy'.

23 Prior to September 2007, the data items, 'Reason for ceasing last job' and 'Main activity when not in the labour force' included the categories 'Own ill-health or injury' and 'Own disability or handicap'. From September 2007, these categories were renamed to ensure they were consistent with those in other data items and have been collected as 'Own short-term illness or injury' and 'Own long-term health condition or disability' respectively. While the way interviewers were instructed to code the responses to the relevant categories did not conceptually change, the renaming has caused a break in time series.

24 From September 2007, a new data item, 'All reasons not available to start work within four weeks', has been collected in addition to 'Main reason not available to start work within four weeks'.

25 Prior to September 2008, the data item 'Main activity when not in the labour force' included the category 'Home duties or caring for children'. From September 2008, this category has been split into two separate categories, 'Home duties' and 'Caring for children'. Care should be taken in interpreting the data in these categories because some people with young children indicated that 'Home duties' was their main activity when not in the labour force, rather than 'Caring for children'.

26 From September 2009, a new response category, 'Believes ill-health or disability discourages employers' has been included in the data items 'Main reason not actively looking for work' and 'All reasons not actively looking for work'. This category is not presented in this publication, however, is available on request.

27 From September 2009, 'Believes ill-health or disability discourages employers' together with 'No jobs in suitable hours' are now included with other responses to derive the population group 'Discouraged job seekers'. Prior to September 2009, 'No jobs in suitable hours' was included in the category 'Other'. As a result of this change, there is a break in time series and users need to exercise care when comparing estimates from 2009 with previous years' data. The following table compares categories affected by the changes in 2008 and 2009.

nil or rounded to zero (including null cells)

28 From September 2009, the method used to determine whether a respondent prefers full-time or part-time work has changed. In 2009, respondents were asked the number of hours they would prefer to work, whereas in previous years, they were asked whether they would prefer to work full-time or part-time. A new data item 'Preferred number of hours' is also now available. Both data items apply only to people who intend to enter the labour force in the next 12 months. As a result of this change, there is a break in time series and users need to exercise care when comparing the estimates in Table 5 of this publication with publications prior to September 2009.

COMPARABILITY WITH29 Due to differences in the scope and sample size of this supplementary survey and
that of the LFS, the estimation procedure may lead to some small variations between
labour force estimates from this survey and those from the LFS.

30 The Persons Not in the Labour Force Survey was first conducted in May 1975 and again in May 1977. From 1979 to 1987 the survey was collected twice a year (March and September). Since then it has been conducted annually in September. Results of previous surveys were published in:

- Persons Not in the Labour Force, Australia (cat. no. 6220.0); and
- standard data service *Persons Not in the Labour Force, Australia* (cat. no. 6220.0.40.001) for 1994 and 1995 (available in hardcopy only).

ACKNOWLEDGMENT

PREVIOUS SURVEYS

31 ABS publications draw extensively on information provided freely by individuals, businesses, governments and other organisations. Their continued cooperation is very much appreciated; without it, the wide range of statistics published by the ABS would not be available. Information received by the ABS is treated in strict confidence as required by the *Census and Statistics Act, 1905*.

PRODUCTS AND SERVICES**32** Additional tables with time series data are released in spreadsheet format. These
tables are available from the ABS website.

APPENDIX 1 POPULATIONS AND DATA ITEMS LIST

DATA AVAILABLE ON REQUEST	The ABS has a range of data available on request from the Persons Not in the Labour Force Survey. This section lists the data items and populations which relate to the
	survey. More detailed breakdowns of some data items may also be available on request.
	The population(s) for a particular data item refers to the person in the survey to whom the data item relates. Where alternative output categories are available for the same data item, these are shown and the data item name is followed by bracketed numeral (e.g. Country of birth (2)).
	For more information about ABS data available on request, contact National Information
	and Referral Service in Canberra on 1300 135 070 or via email to <client.services@abs.gov.au> or contact Labour Supplementary Survey Section on</client.services@abs.gov.au>
	(02) 6252 7206 or via email to <labour.statistics@abs.gov.au>.</labour.statistics@abs.gov.au>
Population 1:	Persons not in the labour force
Population 2:	Persons not in the labour force who wanted to work
Population 3:	Persons not in the labour force with marginal attachment to the labour force
Population 4:	Persons not in the labour force who wanted to work but were not actively looking for work and were available to start work within four weeks
Population 5:	Persons not in the labour force who were discouraged job seekers
Population 6:	Persons not in the labour force who wanted to work but were not actively looking for work and were not available to start work within four weeks
Population 7:	Persons not in the labour force because they were caring for children, who wanted to work but not actively looking for work
Population 8:	Persons not in the labour force who previously had a job
Population 9:	Persons not in the labour force without marginal attachment to the labour force
Population 10:	Persons not in the labour force whose last job was less than 20 years ago

(c) This product replaces the publication Working Arrangements, Australia (cat. no. 6342.0).

TECHNICAL NOTE DATA QUALITY

INTRODUCTION	1 Since the estimates in this publication are based on information obtained from occupants of a sample of dwellings, they are subject to sampling variability. That is, they may differ from those estimates that would have been produced if all dwellings had been included in the survey. One measure of the likely difference is given by the standard error (SE), which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included. There are about two chances in three (67%) that a sample estimate will differ by less than one SE from the number that would have been obtained if all dwellings had been included, and about 19 chances in 20 (95%) that the difference will be less than two SEs. Another measure of the likely difference is the relative standard error (RSE), which is obtained by expressing the SE as a percentage of the estimate.
	2 Due to space limitations, it is impractical to print the SE of each estimate in the publication. Instead, a table of SEs is provided to enable readers to determine the SE for an estimate from the size of that estimate (see table T1). The SE table is derived from a mathematical model, referred to as the 'SE model', which is created using data from a number of past Labour Force Surveys. It should be noted that the SE model only gives an approximate value for the SE for any particular estimate since there is some minor variation between SEs for different estimates of the same size.
CALCULATION OF STANDARD ERROR	3 An example of the calculation and the use of SEs in relation to estimates of persons is as follows. Table 1 shows that the estimated number of people in Australia who were discouraged job seekers was 106,600. Since the estimate is between 100,000 and 150,000, table T1 shows that the SE for Australia will lie between 5,100 and 6,050 and can be approximated by interpolation using the following general formula:
	SE of estimate
	$= lower SE + \left(\left(\frac{size \ of \ estimate - lower \ estimate}{upper \ estimate - lower \ estimate} \right) \times (upper SE - lower SE) \right)$
	$=5,100 + \left(\left(\frac{106,600 - 100,000}{150,000 - 100,000} \right) \times (6,050 - 5,100) \right)$
	= 5,200 (rounded to the nearest 100)
	4 Therefore, there are about two chances in three that the value that would have been produced if all dwellings had been included in the survey will fall within the range 101,400 to 111,800 and about 19 chances in 20 that the value will fall within the range 96,200 to 117,000. This example is illustrated in the following diagram.
	Published estimate ('000)
	96.2 101.4 106.6 111.8 117.0
	2 chances in 3 that the true value is in this range
	<→
	19 chances in 20 that the true value is in this range

.

5 In general, the size of the SE increases as the size of the estimate increases. Conversely, the RSE decreases as the size of the estimate increases. Very small estimates are thus subject to such high RSEs that their value for most practical purposes is unreliable. In the tables in this publication, only estimates with RSEs of 25% or less are considered reliable for most purposes. Estimates with RSEs greater than 25% but less than or equal to 50% are preceded by an asterisk (e.g.*3.2) to indicate they are subject to high SEs and should be used with caution. Estimates with RSEs of greater than 50%, preceded by a double asterisk (e.g.**0.4), are considered too unreliable for general use

CALCULATION OF STANDARD ERROR continued

PROPORTIONS AND PERCENTAGES and should only be used to aggregate with other estimates to provide derived estimates with RSEs of less than 25%.

6 Proportions and percentages formed from the ratio of two estimates are also subject to sampling errors. The size of the error depends on the accuracy of both the numerator and the denominator. A formula to approximate the RSE of a proportion is given below. This formula is only valid when x is a subset of y.

 $RSE\left(\frac{x}{y}\right) = \sqrt{\left[RSE(x)\right]^2 - \left[RSE(y)\right]^2}$

7 Considering the example from paragraph 3, of the 106,600 people who were discouraged job seekers, 56,300 or 52.8% were females. The SE of 56,300 may be calculated by interpolation as 4,000. To convert this to an RSE we express the SE as a percentage of the estimate, or 4,000/56,300=7.1%. The SE for 106,600 was calculated previously as 5,200 which converted to an RSE is 5,200/106,600=4.9%. Applying the above formula, the RSE of the proportion is:

 $RSE = \sqrt{(7.1)^2 - (4.9)^2} = 5.1\%$

8 Therefore, the SE for the proportion of discouraged job seekers who were females is 2.7 percentage points (=(52.8/100)x5.1). Therefore, there are about two chances in three that the proportion of females who were discouraged job seekers was between 50.1% and 55.5% and 19 chances in 20 that the proportion is within the range 47.4% to 58.2%.

DIFFERENCES

9 Published estimates may also be used to calculate the difference between two survey estimates (of numbers or percentages). Such an estimate is subject to sampling error. The sampling error of the difference between two estimates depends on their SEs and the relationship (correlation) between them. An approximate SE of the difference between two estimates (x–y) may be calculated by the following formula: $SE(x-y) = \sqrt{[SE(x)]^2 + [SE(y)]^2}$

10 While this formula will only be exact for differences between separate and uncorrelated characteristics or subpopulations, it is expected to provide a good approximation for all differences likely to be of interest in this publication.

GLOSSARY

Actively looking for work	 People who were taking active steps to find work. Active steps comprise: writing, telephoning or applying to an employer for work; answering an advertisement for a job; checking noticeboards; being registered with Centrelink as a jobseeker; checking or registering with any other employment agency; advertising or tendering for work; and contacting friends or relatives.
Age of youngest child	Age of the youngest child, 12 years and under, in the household.
Available to start work within four weeks	People who were available to start work within four weeks or, for people with children aged 12 years and under, could start work within four weeks if suitable child care was available.
Civilian population	All usual residents of Australia aged 15 years and over except members of the permanent defence force, certain diplomatic personnel of overseas governments customarily excluded from Census of Population and Housing and estimated resident population counts, overseas residents in Australia, and members of non-Australian defence forces (and their dependants) stationed in Australia.
Contributing family workers	Persons who work without pay in an economic enterprise operated by a relative.
Did not want to work	People who were not classified as employed or unemployed who answered 'no' when asked if they would like a job.
Discouraged job seekers	 People with marginal attachment to the labour force who wanted to work and were available to start work within the next four weeks but whose main reason for not actively looking for work was that they believed they would not find a job for any of the following reasons: considered to be too young by employers; considered to be too old by employers; believes ill health or disability discourages employers; lacked necessary schooling, training, skills or experience; difficulties because of language or ethnic background; no jobs in their locality or line of work; no jobs in suitable hours; and no jobs at all.
Employed	 People aged 15 years and over who, during the reference week: worked for one hour or more for pay, profit, commission or payment in kind in a job or business, or on a farm (comprising employees, employers and own account workers); or worked for one hour or more without pay in a family business or on a farm (i.e. contributing family workers); or were employees who had a job but were not at work and were: away from work for less than four weeks up to the end of the reference week; or away from work for more than four weeks up to the end of the reference week and received pay for some or all of the four week period to the end of the reference week; or away from work as a standard work or shift arrangement; or on strike or locked out; or on workers' compensation and expected to return to their job; or

GLOSSARY continued

Family	Two or more people, one of whom is at least 15 years of age, who are related by blood, marriage (registered or de facto), adoption, step or fostering; and who are usually resident in the same household. The basis of a family is formed by identifying the presence of a couple relationship, lone parent-child relationship or other blood relationship. Some households will, therefore, contain more than one family.
Family reasons for not actively looking for work	Includes ill health of someone other than themselves, caring for children and other family considerations.
Full-time preference	People who preferred to work 35 hours or more a week. For this survey, full-time preference is derived by applying data collected on respondents' preferred number of hours to those who intended to or might enter the labour force in the next 12 months.
Full-time or part-time status of last job	The perception of people of whether they worked full-time or part-time in their last job.
Future starters	People waiting to start, within four weeks of the end of the reference week, a new job that they have already obtained (and could have started in the reference week if the job had been available then). Under International Labour Organisation (ILO) guidelines, these persons do not have to be actively looking for work to be classified as unemployed.
Had a job to go to	People who were waiting to start a job, but would not be starting within four weeks. Also includes people who had a job but, up to the end of the reference week, had been away from work without pay for four weeks or longer and had not been actively looking for work.
Intention to enter the labour force in the next 12 months	The intention of people to work or look for work in the 12 months following the interview.
Job	Any paid employment, full-time or part-time, lasting two weeks or more.
Labour force	The civilian population is split into two mutually exclusive groups: the labour force (employed and unemployed people) and persons not in the labour force. The definitions conform closely to the international standard definitions adopted by the International Conferences of Labour Statisticians.
Left a job	People who are classified as voluntarily ceasing their last job.
Lost a job	People who are classified as involuntarily ceasing their last job.
Main activity when not in the labour force	The main activity of people who are not in the labour force since they last worked or looked for work (or in the last 12 months if they haven't worked in the last year).
Marginal attachment to the labour force	 People who were not in the labour force in the reference week, wanted to work and: were actively looking for work but did not meet the availability criterion to be classified as unemployed; or were not actively looking for work but were available to start work within four weeks.
	The criteria for determining those in the labour force are based on activity (i.e. working or looking for work) and availability to start work during the reference week. The criteria associated with marginal attachment to the labour force, in particular the concepts of wanting to work and reasons for not actively looking for work, are more subjective. Hence, the measurement against these criteria is affected by the respondent's own interpretation of the concepts used. An individual respondent's interpretation may be affected by their work aspirations, as well as family, economic and other commitments.
	For more information see article <i>Understanding the Australian Labour Force Using ABS Statistics</i> in <i>Labour Force, Australia</i> (6202.0).
Main English-speaking countries	The list of main English-speaking countries provided here is not an attempt to classify countries on the basis of whether or not English is the predominant or official language of each country. It is a list of the main countries from which Australia receives, or has received, significant numbers of overseas settlers who are likely to speak English. These

GLOSSARY continued

Main English-speaking countries <i>continued</i>	countries comprise the United Kingdom, the Republic of Ireland, New Zealand, Canada, South Africa and the United States of America.
Occupation of last job	An occupation is a collection of jobs that are sufficiently similar in their title and tasks, skill level and skill specialisation which are grouped together for the purposes of classification. In this publication, occupation refers to Major Group as defined by <i>ANZSCO – Australian and New Zealand Standard Classification of Occupations, First Edition, Revision 1</i> (cat. no. 1220.0) and relates to persons who have had a job less than 20 years ago only.
Part-time preference	People who preferred to work one to 34 hours a week. For this survey, part-time preference is derived by applying data collected on respondents' preferred number of hours to those who intended to or might enter the labour force in the next 12 months.
Permanently not intending to work	People aged 65 years and over who said they were permanently not intending to work.
Permanently unable to work	This category is used only if a respondent, or a person answering on their behalf, volunteers that he/she or another member of the household is permanently unable to work.
Personal reasons for not actively looking for work	Includes 'own short-term illness or injury' or 'long-term health condition or disability', 'pregnancy', 'attending an educational institution', 'had no need to work', 'welfare payments or pension may be affected', and 'moved house or on holidays'.
Persons in the labour force	People who were classified as being in the labour force, that is, either employed or unemployed.
Persons not in the labour force	People who were not in the categories 'employed' or 'unemployed' as defined.
Persons not in the labour force because they were caring for children, who wanted to work but not actively looking for work	 People who wanted to work and: were not actively looking for work because they were caring for children, but were available to start work within four weeks; or were not actively looking for work and reported that they were not available to start work within four weeks because they were caring for children.
Preferred number of hours	The number of hours people, who intend to enter the labour force in the next 12 months, would like to work each week.
Reference week	The week preceding the week in which the interview was conducted.
Status in employment of last job	People who had a job in the last 20 years classified by whether they were employees, employers, own account workers, contributing family workers or unpaid voluntary workers in their last job.
Time since last job	The elapsed time since ceasing the last job.
Unemployed	 People aged 15 years and over who were not employed during the reference week, and: had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week and were available for work in the reference week; or were waiting to start a new job within four weeks from the end of the reference week and could have started in the reference week if the job had been available then.
Wanted to work	People not in the labour force who were not actively looking for work who answered 'yes' or 'maybe' when asked if they would like a job, as well as those people not in the labour force who were actively looking. It is assumed those people actively looking want a job.
