MAIN FEATURES

LIVESTOCK

The trend estimate for cattle slaughterings in April 2011 fell 1% to 591 thousand compared to March 2011.

Calf slaughterings in April 2011 fell 2% to 61 thousand compared to March 2011 and fell 21% compared to April 2010.

In April 2011, the trend estimate for sheep slaughterings fell 4% to 374 thousand from March 2011 and decreased 26% compared to April 2010.

Lamb slaughterings fell 2% to 1.4 million in April 2011 compared to March 2011.

The trend estimate for pig slaughterings in April 2011 was little changed from March 2011 at 378 thousand.

LIVESTOCK SLAUGHTERED, Australia—April 2011

	Original	Seasonally Adjusted	Trend
	no.	no.	no.
Cattle(a)	549 985	570 874	591 121
Calves	55 618	59 863	61 013
Sheep	293 349	356 344	374 466
Lambs	1 351 691	1 404 041	1 399 698
Pigs	361 300	378 722	377 760

(a) Excludes calves

MEAT

.

In April 2011, the trend estimate for beef production decreased 1% to 168 thousand tonnes compared to March 2011.

Veal production in April 2011 fell 2% to 4 thousand tonnes compared to March 2011.

In April 2011, the production of mutton decreased to 9 thousand tonnes, a fall of 4% from March 2011 and a fall of 24% from April 2010.

Lamb production fell 1% in April 2011 to 31 thousand tonnes compared to March 2011.

In April 2011, the trend estimate for production of pig meat remained steady at 28 thousand tonnes compared to March 2011.

MEAT PRODUCED, Australia—April 2011

	Original	Seasonally Adjusted	Trend
	t	t	t
Beef	156 658	162 546	167 969
Veal	3 496	3 773	3 945
Mutton	6 528	8 187	8 645
Lamb	30 392	30 939	30 873
Pig	26 531	27 805	27 729

EXPLANATORY NOTES

INTRODUCTION

SEASONAL ADJUSTMENT

1 This publication presents statistics on livestock slaughterings and meat production. These statistics are based on a monthly collection from abattoirs and other major slaughtering establishments and include estimates of animals slaughtered by country butchers and other small slaughtering establishments. More detailed information on this series can be obtained by referring to the Australian Bureau of Statistics (ABS) quarterly publication, *Livestock Products, Australia,* (cat.no.7215.0).

2 From July 2010, on-farm slaughter was no longer included in estimates of livestock slaughterings or meat production. Historical data back to July 2007 were revised for all series. Calf and pig definitions were also aligned to current industry standards.

3 In October 2010, a coverage exercise was undertaken to refresh the sample frame used in the Livestock Slaughtered collection. The coverage exercise also enabled review of the constant factor applied to monthly slaughter and meat production estimates to account for the activities of small abattoirs. Together these activities serve to ensure the ongoing quality of estimates produced from this collection.

4 From October 2010, estimates of livestock slaughter and meat production included in this and the related publication *Livestock Products, Australia* (cat. no. 7215.0) reflect sample frame revisions and updates to the constant arising from the coverage exercise.

5 These changes have had only a minor impact on estimates and on comparability of data over time.

6 Further information on the October 2010 coverage exercise and related impacts can be obtained by contacting the Agricultural and Environment Business Statistics Centre on (03) 6222 5940 or via email <a private the agriculture.statistics@abs.gov.au>.

7 Red meat is shown in carcass weight and excludes offal.

8 Care should be taken when using this information as the figures only relate to slaughterings for human consumption and do not include animals condemned, slaughtered for pet food or those killed for boiling down.

9 The figures in this publication have been rounded. As a result, discrepancies may occur between sums of the component items and totals.

10 Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences can be more clearly recognised.

11 In the seasonal adjustment of the livestock estimates, account has been taken of both normal seasonal factors and 'trading day' effects, where significant. Seasonal adjustment does not remove from the series the effect of irregular influences (e.g. abnormal weather, industrial disputes).

12 In this publication, the seasonally adjusted estimates are produced by the concurrent seasonal adjustment method which takes account of the latest available original estimates. This method improves the estimation of seasonal factors and, therefore, the seasonally adjusted and trend estimates for the current and previous months. As a result of this improvement, revisions to the seasonally adjusted and trend estimates will be observed for recent periods. A more detailed review is conducted annually.

13 For further information, see *Time Series Analysis Frequently Asked Questions, 2003* (cat.no. 1346.0.55.002).

14 From September 2007, improved methods of producing seasonally adjusted estimates, focused on the application of Autoregressive Integrated Moving Average (ARIMA) modelling techniques, were implemented. The ARIMA modelling technique can be used to extend original estimates beyond the end of a time series.

EXPLANATORY NOTES continued

.

SEASONAL ADJUSTMENT continued	15 For further information on ARIMA modelling, see the feature article ' <i>Use of ARIMA modelling to reduce revisions</i> ' in <i>Australian Economic Indicators, Oct 2004</i> (cat. no. 1350.0).
TREND ESTIMATES	16 A trend estimate is obtained by reducing the irregular component from the seasonally adjusted series. For monthly data, trend estimates are derived by applying a 13-term Henderson moving average to the seasonally adjusted series. Revisions of trend estimates will occur with revisions to the original data and re-estimation of seasonal factors.
	17 As for the seasonally adjusted state components, the state component trend estimates have been produced independently and therefore may not add up to the Australian group totals.
	18 For further information, see Information Paper: <i>A Guide to Interpreting Time Series</i> - <i>Monitoring Trends, 2003</i> (cat. no. 1349.0).
RELATED PUBLICATIONS	19 Current publications and other products released by the ABS are listed under the Statistics and Topics @ a Glance pages on the ABS website <http: www.abs.gov.au="">. The ABS also issues a daily Release Advice on the website which details products to be released in the week ahead.</http:>
	 20 Other ABS publications containing livestock data include: Agricultural Commodities, Australia (cat. no. 7121.0) Agricultural Commodities: Small Area Data, Australia (cat. no. 7125.0) Livestock Products, Australia (cat. no. 7215.0) Value of Agricultural Commodities Produced, Australia (cat. no. 7503.0)
GENERAL ACKNOWLEDGMENT	21 ABS publications draw extensively on information provided freely by individuals, businesses, governments and other organisations. Their continued cooperation is very much appreciated. Without it, the wide range of statistics published by the ABS would not be available. Information received by the ABS is treated in strict confidence as

required by the Census and Statistics Act 1905.
